Ephraim may take 30 drops Spt. Turpentine 3 times daily in a little Burdock Tea of which he may drink freely through the day, I will be out some time to Morrow

Yours &c R. Thorpe

If Frey complains of the pain in his side to day he had better have a blister over the seat of the pain to night & if his bowels were not moved to day you would oblige me by administering a table spoonful of salts —

Joshua has an intermitting fever. the Pain he complains of, appears to be seated in the Stomach. I would recommend an other Emetic of Tarter tomorrow morning, in the evening he may take 15 grs Calomel if this does not operate well it may be repeated the next morning. After which it will be necessary to give the Bark freely during the absence of fever

Your's respectfully

R. Thorpe

Dear Sir. Annapolis Dec.r 24th 1827 —

I received your Letter a few Days past — mentioning where to send the Honey Locust seed — On the 21st Inst.t I sent a Barrel headed up, of the pods of the Honey Locust seed — by the Annapolis Packet — directed in your name — to the care of Mess.rs Brannan & Tugs Howard Street Baltimore — requesting the Capt.n of the Packet to Lire a Dray to send the Barrel, as directed — I hope you will receive it safe — I should suppose the sooner the seed is taken out of the pods the better — as they may get too moist in the Barrel — This seed I trust some years hence will make a fine show of Trees around your Vineyard — forming a good Barrier to the enclosure — as well as a pleasant object to look at —

Indeed we have had very uncommon

Letters 1827
