Children Cry for Fletcher's

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of *Chas. H. Fletcher* and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic, all Teething Troubles and Diarrhœa. It regulates the Stomach and Bowels, assimilates the Food, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

COMMISSIONERS' NOTICE

The County Commissioners of Carroll county will meet at their office, in Westminster, every Monday and the first Tuesday after the first Monday of the month in April, 1913, for the transaction of business.
By order,
O. EDWARD DODRER,
3 11 Clerk.

IN THE ORPHANS' COURT OF CARROLL COUNTY:

October Term, 1914.
Estate of Cornelius H. Shipley, deceased.
On application, it is ordered, this 9th day of November, 1914, that the sale of Real Estate of Cornelius H. Shipley, late of Carroll county, deceased, made by Eleanor M. Wagner, and Lucinda R. McQuay, Executors of the last Will and Testament of said deceased, and this day reported to this Court by the said Executors, be ratified and confirmed, unless cause be shown to the contrary on or before the 2nd Monday, 14th day of December next; provided a copy of this order be inserted for three successive weeks in some newspaper printed and published in Carroll county, before the 1st Monday, 7th day of December, next. The report states the amount of sale to be $1025.00.

CURING THE HALTER PULLER

Band Around Horse's Body Surprises and Mystifies Him and He Soon Learns to Behave Himself.

Have you ever owned a horse that broke his halter rope again and again? I have seen some that were tied with long chains because the owner despaired of ever keeping them in their stalls by any other method. This habit may be cured very easily, however.
Put a band around the horse's body just in front of the rump. To the underside of this attach one end of the halter rope. Run the rope through the halter ring, but do not tie it to the ring. Tie the loose end of the rope to the manger in the usual way. When the horse pulls the band will tighten on his body. This, says Epitomist, is so unusual that it surprises and mystifies him. If he has had the habit long, however, he will try again, and again he will be surprised. Gradually he learns that he is not master of the situation. His will is broken and the habit is cured.

Cure for the Halter Puller.

HOW TO IMPROVE LAMB CROP

Practice of Allowing Youngsters to Run With Mothers Until Breeding Time is Objectionable.

Lambs should be weaned when from four to four and one-half months old. So says Frank Kleinheinz, shepherd of the University flocks, in answer to numerous inquiries upon this subject.
Many flockmasters allow the lambs to run with their mothers until breeding time. This Mr. Kleinheinz regards as very objectionable for it annoys the ewes and keeps them in poor condition. Moreover, at this time the lambs get but little milk and they will really do better without it.
When taken from their mothers, the lambs should be put on a piece of fresh pasture, which will help to avoid much of the stomach worm trouble.
After weaning time the ewes should be put on a scant pasture for about a week in order to dry them up quickly. During this period they should be milked a few times to prevent the udder from caking and as soon as they are fairly dry they ought to be placed on good pasture again, where they will put on flesh and become strong and vigorous before they are bred in the fall.
Early weaning and good care of the ewes after the lambs are taken away enables the ewes to go into winter quarters in good condition, thus aiding winter feeding and insuring a large crop of strong lambs in the spring.

Johnson Grass Exterminators.

The Tunis sheep utilized in the breeding experiments of the Arizona station farm have developed great efficiency as Johnson grass exterminators. Director Forbes says that 175 of these sheep were sufficient to keep down the Johnson grass on five miles of weedy ditches during the entire growing season. They saved the cost of ditch cleaning and at the same time made wool and mutton grow where one of the most stubborn weeds of Arizona had grown before.

LIVE STOCK NOTES

The market demands light hogs in summer and heavy hogs in the winter time.

• • •

Openings near the ground should be closed so the young pigs cannot crawl through.

• • •

To prevent thumps give the pigs plenty of exercise and do not overfeed them.

• • •

Experiments indicate that most of the body increase of young pigs occurs at night.

• • •

Feed the hogs lightly, preferably on dry feed, just previous to shipping them to market.

• • •

In feeding grain to hogs even in summer, it is best to feed on a clean, light-feeding floor.

• • •

Judgment is the outgrowth of experience, yet a man may have a wide experience and yet lack in judgment.

• • •

Your dairy calls for pigs to patch the profit of utilizing much that is wasted if you have no hogs to [illegible]

The Rev. A. F. Campbell, long and well-known in this county, will conduct a limited party of tourists to the Panama Exposition next summer, and will be glad to correspond with anyone who may contemplate this trip. Total cost inclusive of all expenses for 45 days will be $425. Full information may be had upon application to Rev. A. F. Campbell, Burlington Route, 1184 Broadway, New York City, c/o R. V. Bowen.

DAIRY

PLAN OF SMALL DAIRY BARN

One Advantage of Building Shown Herewith is Twelve-Foot Driveway Across North End.

I have a barn built last year which is as handy as any I have seen. It stands north and south, the main building 38 by 52 feet, with a lean-to on the west 16 feet wide. Beginning at the south end of the main building is a six-foot feed room 32 feet long. On each side of this room are three nine-foot stalls and one five-foot stall. Crossways of the barn from east to west is a 12-foot

Floor Plan of Small Dairy Barn.

driveway with a door high enough that I can drive in with a load of hay, writes J. H. King in Missouri Valley Farmer. I unload with hay slings and rope from inside, which I find much more handy than unloading from the outside.
North of the driveway, at the east corner is an eight-foot storeroom. Then come 20 feet for bins. The remaining ten feet is added to an 8 by 16-foot lean-to which I am now rigging up for well, gasoline engine, corn grinder, fanning mill, grindstone, cream separator, and as many more tools as I can put in and run with the engine. Overhead I will put an 80-barrel water supply tank, and will pipe water from there to hogs, house, milkhouse, fishpond and horse tanks.
Beginning at the south end of the lean-to, next to main building, is a four-foot feed room. At the side of this are five double stalls for sows, equally dividing 32 feet of space. The main building is 17 feet high to the sheeting, which gives plenty of room for hay.

The War In Europe

FIERCE FIGHTING IN POLAND AND EAST PRUSSIA

RUSSIANS CLAIM A GREAT VICTORY, BUT GERMANS MAKE A SIMILAR CLAIM

GREAT SUFFERING AMONG RUSSIANS LIVING IN GALICIA, BUT NOTHING NEW FROM WAR IN THAT SECTION

SITUATION UNCHANGED IN FLANDERS AND FRANCE

BRITISH BATTLESHIP BULWARK BLOWN UP AT SHEERNESS NEAR MOUTH OF THE THAMES

Poland and East Prussia has been the principal seat of the fighting of the war in Europe during the past week. The German attempt to capture Warsaw has evidently been foiled and the Germans have been driven back. The Russians claim to have won a great victory, but Berlin sends out an optimistic story, not only denying this, but declaring that the Germans have captured 40,000 prisoners, many guns and large quantities of amunition. Why they retreated, if that were true, would be a strange problem. Probably both sides have exaggerated what they claim. The advantage in the fighting, however, seems to have been with the Muscovites.
Petrograd reports that Russians living in Galicia have been cruelly treated by the Austrians and are in great distress and suffering.
Nothing of much consequence is reported from the Turkish field of conflict, and the situation between the Germans and Allies in Flanders and France remains practically unchanged. There has been fighting at some points on the long battle line, but no decided advantage to either.
The British Battleship Bulwark was blown up and sunk near Sheerness, at the mouth of the Thames, yesterday morning. The British Admiralty expresses the opinion that the disaster was caused by the explosion of one of her own magazines and not by a German submarine. She was a 15,000 ton ship and the disaster is a severe blow to the British Navy. She sank immediately, carrying most of her complement of over 700 officers and men to the bottom.

Dry Quarters for Calf.

The calf's quarters should not be allowed to accumulate a lot of damp, dirty materials, as this is almost sure to cause sickness and bad results. The bedding should be abundant and changed often. In order that the pens or stalls be kept clean they should be in the choicest part of the barn, where sunshine and light are abundant. In summer they should have access to a pasture where there is plenty of shade.

Cause of Stringy Milk.

It has been proven that ropy or stringy milk can be carried from one place to another by milk utensils not being thoroughly cleaned and sterilized, and in this case the only remedy is a more thorough and careful cleaning.

T. J. COONAN, P. M.

COST OF PASTEURIZING MILK

About One-Third Cent Per Gallon is Price Set by Government as Result of Tests.

From tests made and reported by the government, the cost of pasteurizing milk when a properly designed or properly operated plant is available, is about one-third cent a gallon. To pasteurize cream costs about two-thirds cent a gallon. Government tests show that the flash process by which milk is raised to a temperature of 165 degrees and kept there for a moment only, is more expensive than the "holder" process, in which milk is maintained for 30 minutes at a temperature of 135 to 145 degrees. Less heat is required for the holder process, and it is believed that for hygienic purposes the latter is preferred.
It is believed that many milk plants and creameries which do not make use of the latent heat in the exhaust steam from their engines and steam-driven auxiliaries would have heat sufficient in many cases for all the pasteurizing done in the plants if it were properly utilized instead of being permitted to go to waste.

Experiment With Alfalfa.

An experiment of the Illinois station showed that for dairy cows a ration containing ten pounds of alfalfa produced 17 per cent more milk than the same ration of timothy used in lieu of alfalfa. Also that alfalfa was worth $10.86 more per ton than timothy and when timothy is worth $10 per ton, an acre of alfalfa is worth $64.44 more than an acre of timothy under the conditions in which the experiment was conducted and when milk is sold at $1.30 per 100 pounds.
