April Term 1868

about them. There are four wall plates on here, twenty three feet long and I hewed them out of the wood. I did not get them sawed but hewed them out of the wood myself The scantling I dont remember the size of exactly, but the length appears to suit. I dont know what change was made. The shealling was ripped up into narrow boards instead of being wide, as is intended here.

Twelfth Cross Interrogatory

12x Can you describe the height of the first floor ceiling in the old house

Answer

I cannot exactly because the old walls was torn down level with the ground before we did much at building & the whole plan was changed not the whole plan of the entire building because it is the same width, but it is two or three or four feet. I think longer than the old building

Thirteenth Cross Interrogatory

13x Did you not to have to know the height of the ceiling before you could direct the length of the scantling

Answer

He Robert Chatterton told me the height of the ceiling before I made the estimate on the paper P.F. when I gave the paper marked P.F. to Robert I had the plan of the house though I made the paper before I got the plan

Fourteenth Cross Interrogatory

14x Where was the flooring in said house obtained from whom and who paid for it.

April Term 1868

Answer

The flooring I believe was got somewhere in Pennsylvania, I dont know the name. I think it was Seedle Eberly & Co. Robert had it charged to him on the bill, but who paid for it I dont know To the best of my knowledge his name was on the bill though it has been so long ago. I dont remember whether both their names were on it or not. It was after the flooring came home the bargain was made, all that was done before was not worth a cent to me or any one else.

Fifteenth Cross Interrogatory

15 x What was the size of the window referred to by you, as first put in & what was the size of the new one substituted by you.

Answer

The size of the window that was put in, in the first place was about twenty eight inches and a half wide by about fourteen high. The new one substituted is a french window, and I think three glass high ten by twelve May be, about three foot five inches high I dont know the exact width, it is about two feet. That is the window I made in the place of the other one, in fact I made all the cellar windows.

Sixteenth Cross Interrogatory

16x State what bills or expenses for the building you saw John pay.

Answer

John bought the shingles, laths, and all the lumber that I furnished about the building which was the inside lumber about the house.
