A FEED AT "THE WHARF"

The Mystery Solved.

It was the night after last Sunday night when everything around "the wharf" was quiet, save the occasional baying of a dog at the then full moon which shed its silver rays over the warehouse of the Farmers' Fertilizer and Feed Company.

Suddenly, as if by magic, dark figures erected on two, or four, dark legs appeared at the front door of the warehouse, and with a strong push threw open the door, and with a still stronger pull whisked in a large dark looking something very much resembling a cook stove. Once inside they grabbed the larger coal stove which sits in the middle of the office and carried it to the side of the room and in its place hooked up the cook stove, the whole time consumed being about ten minutes. A fire was lighted immediately and frying pans, boilers and other necessary and useful kitchen utensils were brought from some hidden place out in the rays of the silvery moon.

Hist! Quietly, one by one, other figures were seen approaching from out of dark and shadowy corners and shady places in and around the warehouse. What did it all mean? Was the office safe going to be blown open, or was a duel, prize fight, or a game of some kind going to be pulled off? Why all these mysterious movements.

Suddenly a light appeared in the room immediately over the office and human forms for a moment or two were seen moving around. But only for a moment or two, because newspapers were tacked over the windows in order to shut out the silvery rays from the moon—and any other rays that might want to pry into the secrets of the upper chamber.

Presently other figures appeared in the offing bringing baskets, chairs, buckets, linen and numerous other articles too numerous to mention, and before long the odors of coffee, fried oysters, stewed oysters and other good and wholesome food, began to seep out into the quiet night air. Then appeared another figure carrying a mysterious looking package which he and the one accompanying him appeared to guard with jealous care. It was not long, however, before the strains of canned music filled all the street and railroad tracks thereabouts and the one lone watcher on the outside was still more mystified, not knowing whether a "feed" or "dance" was about to "take place." No ladies having appeared he was satisfied no dance was to be held. Then it must be a "feed;" and it was a "feed" with the word "feed" very much emphasized, and the mystery was solved.

It appears that on Monday last the question of a good oyster "feed" was brought up among the employees of the Farmers Fertilizer and Feed Company—in whose office many other questions have been "brought up" and settled one way or another—and some of their friends who, in cold weather warm their shins, and other parts of their bodies around the large coal stove in the office.

In a short while—to the great surprise of all—the question was settled, and the services of "Sing" Dorm and Walter Sims, or "Simmy," were secured, and scouts sent out to "gather in" the fundamentals of the "feed."

The upper room was swept and garnished—much to its surprise—and everything, including the cook stove was provided. The "feed," however was to be a secret one and those not possessing the password were to be excluded from the feast of reason and flow of soul.

The feed was finally pulled off in fine style. Plenty of "stuff," lots of music, and quiet fun.

Those present were: Ezra M. Bish, Charles Royer, Jesse C. Royer, Jesse E Royer, George E. Marker, Ellsworth Englar, Harry Jones, Dr. Jesse F. Englar, Arthur Green, John Hilterbridle, William F. Helm, J. Henry Leister, Harry Royer, and John Kaufman. Peter Frounfelter acted as janitor and outside guard.

The menu consisted of oysters raw, fried and stewed, potato salad, potato chips, cold slaw, cheese, crackers, and pumpkin pie with a peach in the center.

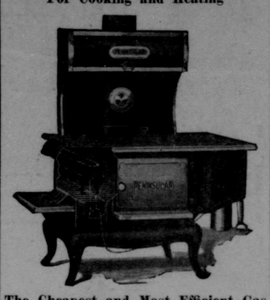

The committee in charge consisted of William F. Helm and Jesse C. Royer, with George E. Marker treasurer.

We have heard some things in the aftermath of the feed and would like to record them here, but time and lack of space forbid. We will state, however, that we have been credibly informed that only two or three of those present got any sleep that night, water, very cool water, being in such demand that bills for surplus water may be presented to some of them by the water company.

WHEN in need of Printing see what we can do before you go elsewhere.

OXO-GAS

Made from Kerosene (Coal Oil) & Air For Cooking and Heating

The Cheapest and Most Efficient Gas Known to Science.

Science has demonstrated that the consumption of coal under present conditions is a very uneconomical method of producing heat. In the ordinary stove only 25% to 30% of the heat is utilized.

The more efficient method consists in extracting a gas from coal and burning the gas, but even this is extremely wasteful, from 30% to 40% of heat units being the highest amount that can be recovered.

OXO-GAS produced from common coal oil (kerosene), particularly when mixed with 96% of atmospheric air (oxygen), is the utilization of every heat unit of the fuel. It produces a larger amount of heat with the smallest possible amount of loss.

In addition to the advantage of the large proportion of heat thus cheaply created and the quickness with which it can be obtained, OXO-GAS is the most perfect form of combustion, there being no smoke, ashes or soot. A more ideal gas for household use could not be conceived.

SANDYVILLE W. C. T. U. MEETING

The Sandyville W. C. T. U. met January 25th. at the home of Rev. W. I Dice. After business several letters were read from State Pres. and some clippings also from our great men read and discussed by all. The seeming lack of interest along line of temperance work, especially educational among young, was especially deplored. The fact that there are laws to discourage drinking has not removed the need of educating our people as to evil effects. This will all take time, money and prayer. From President Harding—"The 18th Amendment denies to a minority of fancied sense of personal liberty, but it is the will of America and must be sustained by the Government and public opinion."

From Chief Justice Taft was read—"I am not in favor of amending the 18th Amendment or allowing light wine &c. to be sold under same. Any such loop hole would make it a laughing stock." Further on in article he said: "It will require 10 years for this country to get its enforcement machinery into working order, but sees no reason for abandoning same." Atty. Gen. H. M. Daugherty. "The number of Federal officers may be multiplied one hundred times and even then the power of this Government will hardly have been tapped. So far we have not scratched surface of power and yet prohibition is a 75% success because of the fact that majority of people do not want liquor in U. S."

GIST

Quite few of our folks have the whooping cough, especially the little folks. Heavy colds are quite plentiful too.

The Homemakers' Club here has secured a traveling library for 3 months. The books may be gotten for a 2 weeks loan from Mr. Charles Kopp's store with out cost to the folks in the community. A good way to pass away your winter evenings.

The Ladies' Aid Society held their January meeting at the home of Mrs. Ida Smith. The next meeting will be held at the home of Mr. and Mrs. Samuel Wilson on Wednesday afternoon, February 21, at which time the officers will be elected.

At the C. E. business meeting held in January at the home of Mr. and Mrs. Ulysses Smith the missionary committee decided to begin to make quilts for the mountain missions and the ladies' have already begun piecing the squares.

The next business meeting will be held on Wednesday evening February 14 at the home of Mr. and Mrs. Wm. B. Bankard.

Preaching Sunday, February 4, at 2:30 P. M., by Rev. J. N. Link, at which time there will be an election of the church officers for the delegate to the M. P. Conference.

C. E. at 7:30 P. M. Leader, Miss Aileen Willison. Topic: "What is the chief value of a Christian Endeavor Society?" As this is Decision Day, hope that everyone will decide to try to live nearer to Christ. Try to attend these services.

HAVE YOU READ

"FOR LOVE'S SAKE"

By L. M. Zimmerman, D. D.

The new book that has received so much favorable mention by many leading newspaper critics.

"A charming volume. Reminiscences of wide human interests and sprightly counsels for to-day abound. The style is sincere and colorful.—N. Y. Post.

EXCERPTS FROM PERSONAL LETTERS

"A masterpiece."
"A precious gem."
"Comforting and wholesome."
"A veritable literary treasure."
"Fills one with hopeful optimism."
"The best line up I have ever read."
"Leaves the soul peaceful and happy."
"Full of beautiful, yes golden truths."
"It is downright food, a real meal that leaves one strengthened."
"It seems that everything good in the Bible is in your book and put in a way that we can understand it."

Send one dollar, the name and proper address to

Hochschild Kohn & Co.
Howard and Lexington Sts.
Baltimore, Md.

and the book will be delivered or call up Calvert 1111 ask for the Book Department and the book will be sent C. O. D. direct to your office or home.

Please order direct from above address.

First Annual Public Sale

—OF—

Pure Bred Duroc Jersey Hogs

WILL BE HELD AT THE

Herr Farm, - Westminster, Md.

Located one mile East of Westminster, Carroll county, Md., on the State Road leading from Westminster to Baltimore (State Road runs through Farm making it possible to reach Sale over hard roads), on

Thursday, March 1, 1923, at 1 P. M.

THE OFFERING WILL CONSIST OF

70 Head Of Sows, Boars, Gilts And Pigs

DAIRY FACTS

GOOD SIRE MOST ESSENTIAL

Dairy Farmer Urged to Stop Working for Scrub Bull and His Unprofitable Progeny.

Look to the future of your herd—the herd of tomorrow, and cease working for the scrub bull and his scrub progeny, and get a good purebred bull that will work for you and build up a high economical producing herd.

Study of the yearly production records and feed costs of 8,994 cows in a report of the United States Dairy division shows the following results:

Cows that produce 100 pounds of butterfat in a year, with an average feed cost of $34, gave a return of $10 over cost of feed; cows that produced 200 pounds of butterfat per year, with an average feed cost of $46, gave a return of $42 over cost of feed; cows that produced 300 pounds of butterfat per year, with an average cost of $58 for feed, gave a return of $74 over cost of feed; cows that produced 400 pounds of butterfat in a year with an average feed cost of $70 gave a return of $106 over cost of feed.

Thus it is shown that as production of fat increases, feed cost also increases, but not in proportion, and the income over the feed cost also increases. It costs twice as much to feed the 400-pound fat-producing cow,

A Good Purebred Bull Will Aid Materially in Increasing Dairy Profits.

but she makes ten times as great a return over feed cost, and "what is left after the bills are paid" is what interests all of us.

A good purebred bull, plus good feed and care will help you to produce the above results.—F. E. Ball, Deputy Colorado State Dairy Commissioner.

A lot of these girls that are trying to break into the movies will at least succeed in breaking their pocketbooks.

Visitors Are Welcome

People understand others much better when they can visit in their homes, know what they do and why they do it. That is why we are glad to have our subscribers visit our telephone home and see how we give you telephone service.

We want you to feel free to visit our Central Offices at any time. If you will just call our Business Office and say that you'd like to go through our plant and let us know when it is most convenient to you, some one who is thoroughly familiar with our equipment and its operation will gladly go with you and explain how your calls are handled.

It is a very interesting experience and it will be our pleasure to have you as our guest.

CHURNING TROUBLE CAUSES

Ordinarily Weather Is Determining Factor, Being Either Too Cold or Else Too Warm.

Churning troubles are due occasionally to the feed or to the fact that it has been some months since the cows were fresh. Ordinarily the trouble is caused by the weather; the cream is either too cold or it has been made too warm. Cold weather holds back the ripening of the cream, also, and unripe cream makes trouble in the churn. The best plan is to keep the cream in a warm enough place so it will ripen as it does in summer, and then to churn with the cream at a temperature of 60 to 62 degrees. Cream some times makes trouble if the cows do not have plenty of salt.

Put Cows on Record.

Get acquainted with your cows; they might be cheating you. The way to do it is to enroll in the Cow Testing association and put them on record.
