General Repair Work

Frank T. Schaeffer

West Main St. Westminster, Md

C. & P. Phone 91-J

While the girls are all wearing mannish clothes, the boys are gazing in the mirrors to see how their hair looks.

Claimed there should be more art in every day life, and Mother is respectfully requested to have the coal hod hand painted.

Complained that some folks are always kicking about the weather, but perhaps they can't find anything else to growl about.

The kids of Westminster are getting ready to show their ardent patriotism on July Fourth by defeating the old ladies with their noise.

Think of it! 24 hours of perfect cooking service per gallon of oil, per burner

"We cut our fuel bills in half"

A Nesco Perfect oil cook stove will start to save for you the day it is installed. It will immediately cut your fuel bills one-third to one-half—*one gallon of oil supplies one burner for twenty-five cooking hours.* This is testified to by thousands of owners.

A Nesco Perfect eliminates practically all replacement and repair costs. It is sturdily built and will last for years. The patented Rockweave Wick, used exclusively in a Nesco Perfect, is non-burnable, never requires cutting, and with a few minutes daily care, wears many months. The name "Rockweave" is printed on the genuine, and only the Rockweave Wick *can and should be* used in a

NESCO PERFECT OIL COOK STOVE

A Nesco Perfect will save your strength and much of your time. There is always a clean, intense flame at your service that quickly cooks any dish. You can use one burner or more; the heat concentrates directly under the utensil; the stove cools quickly when turned off—so a Nesco Perfect offers you a cool, healthy kitchen to work in.

With the saving of money, time and vitality, a Nesco Perfect brings cooking efficiency beyond your fondest expectations. You can roast, bake, boil, fry, and toast with this stove and do it with ease and dispatch. Visit our store where you can see and interestingly prove the possibilities and benefits of a Nesco Perfect in your home.

HELPING THE EXPORT TRADE

Information supplied by the Department of Commerce in aid of American manufacturers desirous of supplying the foreign market is of a very practical and definite sort. The Bureau of Foreign and Domestic Commerce has compiled a list of more than 200 American products that are wanted by foreign purchasers. In each instance confidential information can be obtained from offices of the Bureau in 33 cities. The data has been compiled from the reports of American commissioners, attaches, and consuls from all parts of the world. Of course general information for the benefit of exporters is always available at the Department, but the effort to bring the individual manufacturer and buyer into communication is an innovation and promises to result in scores of sales.

Generally agreed among the maiden ladies that the man power of the nation is imperfectly developed.

MILLERS

Mr. and Mrs. David Brilhart, of Manchester, spent last Sunday visiting Mr. and Mrs. Harry Brilhart.

Those who spent last Sunday at the home of Mr. and Mrs. Everett Miller were Mr. and Mrs. Nelson Garrett, Mr. and Mrs. Howard Garrett and children, Miss Helen Frederick and Mr. and Mrs. Lloyd Miller.

Misses Mildred and Marie Warner, of Baltimore, spent last Saturday and Sunday visiting relatives here.

The following spent last Sunday visiting at the home of Mr. and Mrs. John K. Miller: Miss May Landis and Mr. William Yox, of near Reisterstown, and Mr. and Mrs. Luther Wentz and children, of Greenmount.

Mr. and Mrs. Ross Hoffacker, of Manchester, spent last Sunday visiting the latter's parents, Mr. and Mrs. Leonard Berkheimer.

Those who spent last Sunday visiting Mr. and Mrs. Henry H. Miller were Miss Myrl Miller, of Baltimore; Mr. and Mrs. Charles Miller and daughter Frances, of Manchester; Mr. and Mrs. Harry Martin, of near Hampstead, and Mr. and Mrs. Lawerence Miller and son Earl.

The Children's Day services were well attended and the program well rendered.

The following spent last Sunday visiting at the home of Mr. and Mrs. Walter Miller: Mr. and Mrs. George Lippy and children, of near Grave Run, and Mr. and Mrs. Dora Wink and children, of near Maple Grove.

Mrs. Amanda Lessner, of Hanover, spent several days the past week visiting friends here.

Mr. George Hoover purchased a new touring car.

PLEASANT VALLEY

Saturday last memorial services were held and graves in the cemetery were strewn with flowers by the children, who marched to the cemetery in a body.

The parade was formed by Chief Marshall, James M. Stoner, of Westminster, and his numerous aids on horseback, followed by the P. O. S. of A. Band of this place.

Arriving at the cemetery the graves were strewn with flowers, and Rev. J. W. Reinecke, took charge of the public meeting. Addresses were made by Rev. William L. Seabrook, Rev. Kingman Handy, General Secretary of Religious Education of the Baptist Church, and Joseph D. Brooks Esq., of Westminster. Miss Mary Myers sang a solo entitled "Our Country And Our God," and Rev. A. G. Wolf offered a prayer. Accompanied by the band the assembly sang "Nearer My God To Thee," and the meeting adjourned.

In the evening a festival was held on the school house grounds.

Mrs. Charles E. Eckard, who, last week suffered a slight stroke of paralysis, is improving.

Sunday last Mr. and Mrs. Frank Snyder entertained Mr. and Mrs. John Utermahlon, Mr. and Mrs. George Strevig, Mrs. James Strevig, Misses Myrl Myers, Alta Strevig, Vesta Strevig, Elva Myers, Grace Snyder, and Messrs. George Stonesifer, John Strevig, Luther Brown, Edgar Strevig, Roscoe Myers, and Eltinge Strevig.

Mrs. Joseph Crushong, and daughters Alta and Mary, spent Tuesday and Wednesday at the home of her sister, Mrs. Frank Snyder.

Dr. J. J. Stewart and Mr. Frank Snyder and daughter Grace Friday last took Miss Grace to Baltimore to have her eyes examined.

Tuesday the stork visited the home of Mr. and Mrs. Rodney Haynes and left a baby girl.

What You Get Is What Counts.

It is very easy to spend money foolishly; spending it sensibly is the rub. Take coal. Many thousands of dollars are consumed in coal that isn't worth the trouble of mining and hauling. That is not our kind. Coal you get here is —Coal. It will burn steadily, conserve its heat, and leave only the white ashes.

LUMBER COAL & SUPPLY CO.

WESTMINSTER. MARYLAND.

The people can no doubt escape from the economic slavery to which many folks object, if they are willing to give up having enough to eat.

EARLY TROUBLES OF BABY CHICKS

"Leg Weakness" Is Indicated When Toes Draw Backwards or Turn to Either Side.

IS COMPARABLE TO RICKETS

Is Characterized by Deficiency of Lime and Phosphates in Bones and Lack of Rigidity—Cod-Liver Oil Effective.

(Prepared by the United States Department of Agriculture.)

Early-hatched chicks frequently develop the condition known as "leg-weakness," say specialists of the United States Department of Agriculture. Its onset is indicated when the toes draw backwards or turn to either side. Later there is lameness, incoordination of movement, and distinct weakness of one or both legs. At times the bill becomes twisted and causes difficulty in feeding.

This condition should not be confused with the infectious diseases of baby chicks such as, bacillary white diarrhea, coccidiosis, and brooder pneumonia; for in the former case the weakness of the legs is the most marked symptom, while in the latter cases it develops shortly before the death of the bird and only as a result of general bodily weakness. Also, the course of the condition is not so acute as is that of the infectious diseases, and the mortality is not as high.

Comparable to Rickets.

"Leg weakness" in chicks is comparable to rickets in other young animals. It depends primarily on interference with normal nutrition of the body. It is characterized by a deficiency of lime and phosphates in the bones and, consequently, a lack of rigidity. The deficiency may be due to insufficient bone-forming substances in the feed, or to the failure of the body to properly utilize the material available.

It has become apparent that a number of conditions other than mineral shortage may affect the system of the chick in such a manner as to interfere with nutrition and bring on "leg weakness." Among these may be mentioned lack of certain vitamins which influence digestion and assimilation of food, close confinement with little room for exercise, absence of sunlight, cold and dampness, concentrated feed unaccompanied by green or other bulky feed, and little or no animal proteins.

To counteract "leg weakness," any of the conditions given, if present, should be corrected. A monotonous ration and over-feeding should be avoided. Green feed if possible, or sour milk, should be provided. The chicks should be allowed outside range and sunlight as early as possible. Placing sod in the brooder is beneficial. Also keep broken oyster shell, or calcium phosphate available.

Cod-Liver Oil Is Effective.

The United States Department of Agriculture states that the best medical treatment for chicks which are being raised under conditions conducive to "leg weakness" is cod-liver oil. This has a specific effect upon lime and phosphate metabolism within the body, and promotes normal bone formation. It is rich in all vitamins, but apparently contains a special vitamin which concerns itself with the disposition of at least some of the minerals required in the animal system. Cod-liver oil may be mixed with the feed for both affected and apparently healthy birds in sufficient amount so that each chick will get about five drops daily. It serves both as a treatment and preventive of the rachitic type of "leg weakness."

COMPOSITION OF PRESS CAKE

Dry Material Produced In Manufacture of Sugar Beets Good for Liming Soils.

The dry material of the filter press cake produced in the process of manufacturing beet sugar consists largely of calcium carbonate, according to the findings of the United States Department of Agriculture and undoubtedly affords a satisfactory material for liming soils. It also contains comparatively small quantities of nitrogen, phosphoric acid, potash and organic material.

The results of the analysis of a number of representative samples of filter press cake are set forth in Department Circular 257, "Composition of Filter Press (Lime) Cake," by Sidney F. Sherwood, chemist in the bureau of plant industry. A copy of this circular may be had upon request from the United States Department of Agriculture, Washington.

"MOTHER" INCUBATOR CHICKS

To Succeed With Young Fowls One Must Be Patient and See That They Learn to Work.

If you would succeed with incubator chicks, "mother" them a bit. Be patient with them and see that they contrive in some way to learn to work in the days of their youth—extreme youth. The mother hen, if you will observe her closely, teaches each of her children how to scratch, paying particular attention to the backward pupil. If wee sma' chicks are to become great sturdy pullets and cockerels, they must early get the habit of exercise, of "rustling" for their feed.

ORCHARD GLEANINGS

TO MAKE BORDEAUX MIXTURE

Farmer Who Has Occasion to Use Liquid Solution Often Should Keep Stock on Hand.

To make bordeaux mixture suspend four pounds copper sulphate in a gunny sack just below the surface of several gallons of water in a clean barrel. When the sulphate is dissolved, which requires three or four hours, remove the sack and stir into the barrel enough additional water to make exactly 25 gallons of the copper solution.

Prepare four pounds lime by slaking it slowly and thoroughly in a clean barrel, strain, and add enough additional water to make exactly 25 gallons of lime-milk. Stir thoroughly.

Pour the two ingredients together into another barrel, or better, directly into the spray tank, if it will hold 50 gallons. It is highly important to stir the mixture very thoroughly and to strain both ingredients before they are combined, as otherwise clogging of the spray nozzles might result.

Use a copper or bronze wire strainer of 18 meshes to the inch. Do not put copper sulphate or bordeaux into tin or iron vessels; use wood or copper containers. Mix the bordeaux as needed and apply at once. It is never so good after it has settled.

Everyone who uses bordeaux frequently and in quantity will find it convenient to keep concentrated stock solutions on hand, as these keep indefinitely if the water which evaporates is replaced.

Build an elevated platform to hold the barrels. Suspend 50 pounds of copper sulphate to dissolve in a 50-gallon barrel of water. Slake 50 pounds of lime in another barrel. Add water to make 50 gallons of lime-milk. When bordeaux is needed stir both stock barrels and take from each as many gallons as the formula calls for in pounds. Dilute the copper sulphate in one barrel and the lime-milk in another, each with half the water, and let the two run together into the strainer of the spray tank.

DRESSING FOR TREE WOUNDS

Waterglass Found Most Satisfactory by Expert at Ohio Experiment Station.

Waterglass was found the most satisfactory dressing for tree wounds in tests made by W. J. Young of the Ohio experiment station. A dressing made for pruning wounds should stick well to the cut surface of the wood, exclude air and moisture, and protect the tree from attacks of fungi which cause rotting of the wood. White lead paint, grafting wax, gas tar, and many other substances as well as waterglass, which is commonly used for preserving eggs, were tested.

Waterglass readily unites with the sap of the tree and forms a successful coating over fresh wounds. Pure lead paint, though especially useful in poisoning the rot-producing fungi, does not stick well unless applied after the cut surface becomes dry.

Waterglass, it was explained, prevents the flow of sap and appears, to preserve the wood from decay. After treatment the cut soon becomes dry and a coat of lead paint may be applied over the waterglass for additional protection if desired. The water glass may be applied as purchased, or if too thick to spread well, a little water may be added.

OIL KILLS SAN JOSE SCALE

Early Success of Experiments Proved So Well That Method Is Spreading Rapidly.

San Jose scale is being controlled by means of an oil emulsion spray in northwestern Arkansas. The success of early experiments has been so well proved that the use of the method is spreading rapidly.

Red engine lubricating oil and resin fish oil soap is heated together and pumped and repumped into itself under pressure several times to insure a thorough emulsion. Six gallons of this stock solution is used to each hundred gallons of water.

GEORGIA PEAR BLIGHT-PROOF

Horticulturists Succeed In Getting Tree Really Worth While After Experimenting.

After 12 years of experimentation, horticulturists at Georgia experiment station announce that they have a blight-proof pear that is really worth while. Fruit growers in Georgia, Florida and Alabama, and in other southeastern states, are trying to get some of the trees. These pears, which are hybrids, are known as Pineapple pears.

Spray Ring Saves Money.

The spray ring saves money for the fruit grower. From five to a dozen growers are plenty to form one. This is a good year to try it out.

Get Material Ready.

Get material ready to spray the fruit trees. To be effective the work must be done at the right time.

Prune Trees While Young.

The pruning of trees while young is very essential in order to train them properly.
