Vrooman Flays Tammany Hall For Attempt to Play "Con" Game on Nation's Farmers

Economic Expert and Official Under Wilson Says Houston Convention Platform Fools Nobody

Flaying Tammany Hall for attempting to play a "con" game on the farmers of the nation, Carl S. Vrooman, assistant secretary of agriculture under President Wilson, declares that intelligent farmers throughout the country have received no comfort from the agricultural plank in the platform of the Democratic convention.

Carl Vrooman

"The Tammany Hall campaign idea seems to be based on the theory that it can sell political gold brick promises to a bunch of hayseeds out West." Mr. Vrooman said "I am confident the farmers of the nation will not fall for this latest 'con' game from 'The Sidewalks of New York.'"

He charged Tammany with being Democratic in name only and said that "It is essentially mercenary and parasitic. It double-crossed Wilson, Cox, and Davis.

"One of Tammany's first acts was of subterfuge an double dealing. The agricultural plank in the Houston platform was a masterpiece of ambiguity, so framed as to admit of one interpretation in the East and another in the West and South.

"A few days after a conference with Peek (George N. Peek, of Moline, Ill.), Governor Smith indorsed the equalization fee principle, but the ne t day he put out a statement flatly repudiating the equalization fee itself.

"Intelligent farmers have got no comfort from the agricultural plank in the Houston platform. It professes platonic friendship for the principle of the equalization fee, without breaking the party or the candidates to the Norris-Haugen bill or to any [illegible] or plan of real benefit to the farmer."

Mr. Vrooman has been active in behalf of the "dirt farmers" in the Democratic party. He drafted and introduced the first farm relief bill [illegible] session 1921.

Mr. Vrooman is an expert on economic subjects and a writer of note. He owns 4300 acres of land near his home in Bloomington, Ill. In addition to his service of five years as assistant secretary of agriculture, he served on the agricultural war mission to Europe.

Kansan Tells of Early Days On West Branch Farm Where Hoover Was Born

E. D. King Recalls Life in Quaint Quaker Settlement in Iowa—Lived With Candidate's Family.

E. D. King, 1216 Richmond Street, Kansas City, Kansas, has many interesting incidents to relate about the Hoover family, having himself lived in the Hoover home in West Branch, Iowa, at the time Herbert Hoover was born.

Mr. King was working for Herbert's father in the blacksmith shop at the time. It was he who went for the [illegible] for when Herbert was born. Mr. King ate his meals with Big Hoover family.

West Branch was at that time a town of about 400 population. It had two blacksmith shops, one hotel, a livery stable, four general stores and a restaurant. It is located in Cedar County, where broad Quaker hats and poke bonnets were worn for almost a generation. Cedar county was on the western edge of the original Black Hawk Purchase which was the nucleus of the State of Iowa. Here farms bordered rougher land of hill and ravine.

According to Mr. King, Hoover was a respected name in Iowa. The family originated in Holland, but has been represented in the United States for nearly two centuries. Andrew Hoover and two brothers, about 1738, obtained land in the uplands of Maryland. Later Andrew's son, John, joined a group of Quakers and moved to the Western Reserve in Ohio.

It was in 1853 that the son of John, Jesse Hoover, Rebecca, his wife, and Eli, their son, and his three children moved farther West, helping to found the town of West Branch. The King family settled there the same year, and both families lived in log cabins for a while, later building better houses. Buffalo and deer were quite common in the vicinity at that time.

Herbert Hoover was only six years only when his father died. His mother did sewing and other kinds of work to support her children. She also took a prominent part in Quaker meetings and was invited to speak in other towns and cities. After she died Herbert and the two other children were cared for by relatives. Herbert went to live with his Uncle Allan and Aunt Millie. This Aunt Millie was, before her marriage, Myra Gifford, a first cousin of Mr. King.

Mr. King left West Branch to go on a farm in western Iowa. He later farmed in Oskaloosa, Kansas. In 1893 he came to Kansas City where he was engaged in the real estate business for some time. He is now employed in a furniture store in Kansas City, Kansas.

HOOVERISMS

The Presidency is more than executive responsibility. It has the inspiring symbol of all that is highest in America's purposes and ideals.

The tie between the child and all adult life is at once the strongest and the gentlest element in human nature.

The greatest government experiment in human history was universal free education at public expense—and it has been successful.

If democracy is to secure its authorities in morals, religion, statesmanship, it must stimulate leadership from its own mass.

HOOVERISMS

Progress of the nation is the sum of the progress of its individuals. Acts and ideas which lead to progress are born out of the womb of the individual mind, not out of the mind of the crowd. The crowd only feels; it has no mind of its own which can plan. The crowd is credulous, it destroys, it consumes, it hates, and it dreams—but it never builds.

Youth to-day is pulling at the traces as never before, it is true, but it is also willing to pull a load. Its eagerness contains a more earnest desire than ever to be of service.

DAIRY FACTS

DAIRYMEN SHOULD DIVERSIFY FARMS

In a study of dairy farms in the Chenango Valley region of New York state, it is proved that it is dangerous for dairymen "to carry all their eggs in one basket," said J. C. Neethling of the agricultural economic department at the New York State College of Agriculture.

"Farmers who rely on dairying alone make smaller labor incomes than farmers receiving part of their incomes from crops and poultry. Cash crops may cause losses in years of unfavorable yields or low prices, but over a five-year period farms growing cash crops gained by it. Farmers deriving less than 10 per cent of their income from crops made a labor income of $232. Those deriving more than 25 per cent from crops made $1,447 labor income.

"It is important also to get a large quantity of mil from each cow. The higher the production the lower the cost of milk and the better the labor income. Pure-bred herds produced better than grade herds but the cost of maintaining them were higher and the labor incomes therefore were smaller.

"Whatever business a person follows, he usually has the impression that the other man does better in another business," Mr. Neethling said "However, a comparison with fruit farms in Niagara county shows that the Chenango valley farmers receive a labor income averaging $585 while the labor income on fruit farms was $286. Comparing again 121 up-state poultry farms and 114 Chenango valley farms, audited in 1925, it was found that dairymen made $1569 labor income and poultrymen $1,674."

Silage Most Succulent Feed for Dairy Cattle

Silage is the best succulent feed for dairy cattle. Silage makes possible the feeding of a relatively cheap succulent feed which can be furnished during any period of the year.

The high moisture content of silage causes it to be relatively low in food value, and low in protein content, but is a good carbohydrate feed. Silage is equal to roots and green crops as a feed, and is much cheaper because it requires less labor. One of the most important essentials of silage is its effect on the digestion of the cow which can be said to be excellent, and it does not harm the teeth of the cow. The average cow should receive 30 to 40 pounds of good silage each day.

Legume silage including alfalfa, sweet-clover, soy beans, field peas, etc. is of fair quality. It is usually best to cure the legumes for hay, but if the weather does not permit of this, or if no other crops is available for silage, the legumes may be used to good advantage.

Right Richness of Cream Secured From Separator

Adjust the cream screw of the separator so as to secure cream testing about 35 to 45 per cent fat. Low testing cream sours and spoils more rapidly than high testing cream so that by the time it reaches the creamery it is often in condition unfit to be made into good butter. In the spoiled and curdy condition it also makes difficult accurate sampling and testing. It is undesirable further because it diminishes the amount of skim milk available for the feeding of calves and pigs; it increases the cost of transportation for every pound of butterfat shipped; it makes impracticable the use of a reasonable amount of starter in the creamery, and starter is essential for the production of the best quality of butter; it does not churn out exhaustively and yields an excessive amount of buttermilk, augmenting the loss of fat and thereby reducing the churn yield.

Dairy Notes

Feeding the dairy calf requires care and judgment especially the first month of its life.

• • •

The robber cow—the unsuspected bandit of the herd—is the dairyman's most serious competitor.

• • •

Dairymen who feed high protein feeds may add more fertility to the soil through manure than is taken out by crops.

• • •

Is your cream separator losing money for you? The best way to answer this question is to have a sample of the skim milk tested for butterfat at your local creamery or cream station.

• • •

The dairy cow is a most important factor in the economics of dairy farm management.

• • •

A good dairy cow probably consumes more water than any other domestic animal. The more feed consumed, the more water the cow requires.

• • •

If the ground is weedy, it is often better to plant the soy beans in rows so that they can be cultivated. When planted in this manner the beans may be kept cleaner than when sown broadcast.
