
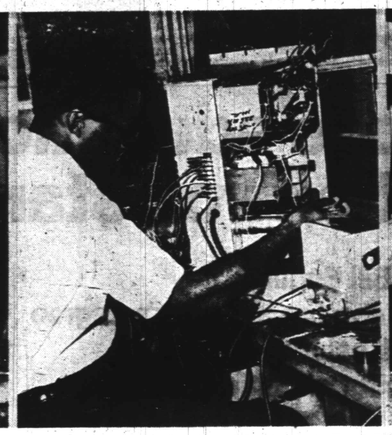
JAMES HALL, a mechanical engineering co-op student, is performing laboratory tests at Martin Orlando in Florida. He also has summer experience with U.S. Steel in Birmingtham, Ala.



NAPOLEON TERRELL is repairing a power supply, one of the varying assignments during his 15-hour work week in an engineering laboratory at Tuskegee's School of Engineering where he is an assistant.

RAYMOND BRYANT, sophomore at Tuskegee, receives instruction in the use of an automatic transformer test set at Western Electric, Winston-Salem, N.C. He will spend two full semesters and two summers in co-work.

Engineers.

Get a fast start at Babcock & Wilcox

Sure, we train you in the ways of B&W. And you get plenty of employee benefits. But mainly, at B&W, you get to be a professional in a hurry.

Look at it this way. The fastest way for you to grow is to help us get things done. Not eventually. Right now. After all, that's the way we grew.

We started out making steam generation equipment. That led to atomic power stations, nuclear marine propulsion equipment, refractories, specialty steel machine tools, computers, and closed-circuit TV.

That's a whole lot of "getting things done."

(And we still make the best boiler in America.)

If your specialty is one of these, get off to an even faster start. Clip this coupon and send it to us. You'll see how fast we move.

At General Electric, there could be a future for you in one of these 29 technologies.

That's how broad our opportunities are. All along the line. From research to development to design to production engineering.

If you act quickly, you can start moving right now.

Send an informal resume to S. Webster, and he will put you in touch with top technical managers speaking for four major departments of the General Electric Defense Electronics Division.

The Departments represented are: Aerospace Electronics Department, Armament Department, Avionic Controls Department, Ordnance Department. Headquartered in New York State and New England, subsections and individually operating groups are located throughout the U.S. and overseas.

Contact S. Webster at General Electric Co., Lakeside Avenue, Burlington, Vt. 05402. It can be your first, fast move into a spot where there'll be a lot more of the same.
