Kent

Vol. 50. CHESTERTOWN, MARYLAND: SATURDAY, MAY 18, 1889. No. 2.

TO THOSE FARMERS

Who Contemplate Using Fertilizers on Their Corn and Truck, We Offer

OUR BONE SUPER-PHOSPHATE

And think we can make it to your interest to deal with us. We had reason to believe last season that fertilizer material of all kinds would be higher this year, and it has proven to be the case, hence we congratulate ourselves that we have now in our building nearly 500 tons of Materials that were bought under last year's contract, and are prepared to offer Special Inducements for Cash or First-class Paper.

MR. E. J. CATTIN may be used our fertilizer last year in the county with successful success. It is the best Truck Fertilizer at the price on the market. MR. J. CORDRAY LLOYD says our Bone Phosphate prevented his corn from freezing in the low land, and made for him better corn than the top ground.

J. R. MASSEY of Harford, says he made a test of our Bone Phosphate alongside of Bone and Super Phosphate, and sold his corn to customers, and that his goods netted him \$14.00 more per acre than the others.

DAVID HAND, of Harford, says our Phosphate gave him the best satisfaction on sugar corn and Tomatoes, that he will want to use and sell from 75 to 100 tons this spring.

WM. R. ALABAND, of Wyeoming, Del. says: Hubbs' Bone Phosphate is the best I have ever used. When picking time came it was all sold.

WM. M. BATTEN, Swedesboro, N. J. one of the largest Truck Growers, says our Bone Phosphate gave him a basket more than the raw than Maple's Fertilizer that cost him \$15.00 more per ton.

Send for Circular Containing Certificates. T. R. HUBBARD & SON, MANUFACTURERS, CHESTERTOWN, MD.

SPRING FERTILIZERS.

From the results of the various SPECIAL FERTILIZERS manufactured by us last spring, we expect a large trade this spring, and laid in a heavy stock of raw materials. From the way orders are coming in, and the expressions of satisfaction from our last year's customers, we take the greatest pleasure in offering the same brands of Fertilizers again. Our goods are so well known in the county that it is not necessary to publish many testimonials, but we will be pleased to show a large number at our office to who ever may require it.

ACME FERTILIZER, No. 1, prevents fraying in corn and will grow a large crop on heavy land. ACME FERTILIZER, No. 2, a Corn Fertilizer for lighter soil, stands high. The increase of Fodder alone will pay for the use of the above Corn Fertilizer.

CLIMAX TRUCK FERTILIZER was used last season by the largest growers of Truck in the county with successful success. It is the best Truck Fertilizer at the price on the market. SPECIAL POTATO FERTILIZER—At the request of some of our customers, we made last season a special High Grade Fertilizer for Potatoes. We have so far more than doubled the yield of our goods over last year. The results were very large. Try it on early or late potatoes.

OUR PEACH TREE FERTILIZER has given great satisfaction, the results of last year more than ever convincing those that have used the same that it pays well. Better Fruit, larger, and more numerous. The Fruit Ripened up splendidly. The trees more vigorous, and complaint of Yellow Leaf Fall at the end of the season.

For prices of the above fertilizers call on us or see our representatives. C. W. KENNARD & CO., Office under VOSHELL HOUSE, March 30, 1889.

FREDERICK FOUNTAIN, R. J. BAKER & CO., MANUFACTURERS OF HIGH GRADE FERTILIZERS, BALTIMORE, MD.

We make a specialty of furnishing in quantities to suit the purchasers every article used for the purpose of fertilizing the soil. We will sell separate or will manipulate and mix to order according to any formula. We also offer to the farmers our old reliable brands of Ammoniated Bone Superphosphate, Corn and Oats Fertilizers, Asparagus Phosphate, Peach Tree Phosphate, Fine Ground Raw Bone, Dissolved South Carolina Phosphate, Muriate Potash, Sulphate Potash and Kamit.

Orders solicited. FREDERICK FOUNTAIN, Agent, CHESTERTOWN, MD. New Store--Old Stand! HORSE-SHOEING Headquarters!

Mrs. D. GRUBER, SAMUEL HICKS, near the Court House, Gives his Exclusive Attention to HORSE-SHOEING. I have learned the business thoroughly and have given it my study, and had much experience in the work. I have a fine assortment of iron shoes, and a better prepared to do Horse-shoeing than shops within 10 miles of Chestertown.

My system of shoeing prevents CUTTING and PULLING and preserves the horses feet. My best recommendation is the universal satisfaction of all who have had a shoeing in returning to any for whom I have done work. My prices guarantee to be as low as any other shoeing establishment. Call on me, and I will give you reliable and expert service. MRS. D. GRUBER, CHESTERTOWN, Md.

To the Farmers' Interest! Owing to the prospect of a STILL GREATER ADVANCE in the PRICE OF BINDER TWINE we have already bought, and are now taking orders for Twine at as early date as convenient. It will be to your interest to do so. PRICES GUARANTEED! J. K. ALDRIDGE & CO., CHESTERTOWN, Md.

Special Notice to the Public! hereby inform the public that I have taken the sole agency of PROF. STRAUSS' ERADICATOR for removing Grass and Old Spots from Silks, Satins, Woollen Goods and Carpets, without injury. You cannot be over-cautious of the quality of this compound until you come to my establishment and observe myself free of charge. Price, 25 cents per box. It will be sent by mail to any one desiring it. Orders will be promptly filled. I am still supplying the well known "VANDEGRIFT HAIR RESTORATIVE." Ask your drug dealer if he can't supply you address the proprietor, JOHN S. VANDEGRIFT, CHESTERTOWN, MD.

STRAW WANTED! HAVING LEASED the Chestertown STRAW BOARD, I am ready to buy ALL THE STRAW from the growers, and will pay the highest price for clean straw, on the basis of 2500 pounds per ton. For any extra, only making those wishing to sell to the thrasher with their straw. WILBUR ELLISON, CHESTERTOWN, Md.

BINDER TWINE! A STANDARD BINDER TWINE, Call on or write to E. J. WATSON, 628 S. Next Door to Express Office, Chestertown, Md. WAGON SPRINGS on sale at the Hardware Store, J. K. ALDRIDGE & CO.

MR. BOWSER CLEANS HOUSE.

His Wife's Vivid Account of the Awful Experience. The annual domestic upheaval in the Bowser household brought the lord and master out in a new and interesting light, thus variously chronicled in the Detroit Free Press by the sympathetic partner of his joys and sorrows: "When did these two colored women want?" inquired Mr. Bowser as he came in the other evening just as the individuals referred to were passing out. "They called to see when I would be ready for them."

"How ready?" "Well, what has Spring, you know, got to do with two colored women?" "I have got to wash a few windows and take up a carpet or two."

"House cleaning?" "No, not exactly, but then—" "See here, Mrs. Bowser, this thing has got to stop right here and now. Because some 200 years ago some old cranky house-keeper in New England felt obliged to rip and tear and upset the house for two or three weeks in April, all you women of today feel obliged to keep up the custom."

"But everybody cleans house more or less." "Can't help that. I'm not going to have everything topsy turvey around here for the next three weeks. That will be the result if you put two women at work. They will spin out the job as long as possible."

"It won't take over a week." "A week! It shouldn't take one day. I can go it and do all the cleaning necessary in one hour."

I didn't say anything further until after supper. Unfortunately for me one of the women returned to ask about a matter she had forgotten, and Mr. Bowser saw her and said: "Are you one of the women who are going to clean house here?" "Yes, sah."

"Excuse me, but I don't believe it! If there's any cleaning to be done I'll do it myself. You needn't put in an appearance here to-morrow nor any other day." "An' you're gwine to clean house?" she asked in surprise. "I am. I know it does not belong to man's state, but I have a young and inexperienced wife who is easily imposed on, and I'm going to prove to her that this house-cleaning business is all a fraud."

"Mr. Bowser," I said, as he returned to the sitting room, "didn't you have an experience last Spring?" "Yes, ma'am, I experienced this house from top to bottom in just two hours, and it still remains the cleanest house in the town. I have nothing particular to do to-morrow, and I shall take hold."

"I can't help you any." "When I want your valuable assistance, I will ask for it, Mrs. Bowser. As I am feeling in good spirits this evening, I might as well begin the cleanest house in the town. I'll wrestle it out to the back hall, ready to go to the barn in the morning."

I went upstairs as he pulled off his coat and spit on his hands. I knew just what to do. In a few minutes I heard the clatter of the stove-pipe, as four or five lengths bounced around on the floor, and three minutes later there was a wild yell for help. I ran down just as the girl was lying on her back on the floor and the stove was lying on Mr. Bowser. He was not in the least hurt, but the girl was in a state of collapse. "Take him off—take the blamed thing off me!"

The girl and I succeeded in lifting it high enough for him to roll out, and he sat up and groaned and swore and threatened dire things. "I was afraid it would be too much for you. I said as I offered him a wet towel." "Oh, you were! How kind of you! You are disappointed because the infernal thing didn't knock the life out of me!"

I went up stairs and rested awhile. Then I heard him moving the furniture about, and by and by he came up to say: "I want some salt to put on the carpet before I sweep."

"But that carpet must come up, Mr. Bowser. It's been down two years." "That's all nonsense! Mother never lifted a carpet until it was worn out. Where's the salt?"

"The curtains must come down, the woodwork be rubbed with a damp cloth, the windows washed, and—" "And the roof of the house raised ten feet of course. One would think we'd had smallpox in the house. I'll get the pebble-ladder and take the curtains down. Perhaps I'll take the carpet up to-morrow, but it's a waste of time."

He went down and got the ladder, and I heard him whistling as he worked at one of the curtains. His whistle presently cut short off, and there was a crash and a yell, and I flew down to find Mr. Bowser lying across that end of the house which still remained in the room. His eyes were closed and I thought him dead from his fall. I got the camphor and the girl flung water in his face, and by and by he gasped and opened his eyes and faintly asked: "Is this heaven?"

"No, Mr. Bowser," I gently replied, "this is only spring housecleaning." "What has happened?" he continued, as he rose up. "You had a fall." "And while I was unconscious you took the advantage of my condition to take a five dollar bill from my wallet?" "I never thought of such a thing."

"Well, I can tell later on. I had a sensation as if some one feeling in my pockets. I'll have that curtain down if it takes a leg." "Won't you please give up your Quixotic idea, Mr. Bowser? No man can clean—" "Can't he? Well, I'll show you to the contrary. Quixotic idea! I'll show you and old Quix, too, that I can do more house cleaning in an hour than you can in a week. Get out of the way while—"

He was in his slippers, and he picked up a big tack, and that ended him. He was half stricken to death for fear of looking, and he insisted on going to bed and sending for a doctor. The good man heard what I had to say and then observed: "Mr. Bowser, don't you leave your bedroom for at least a week to come. That foot must have perfect rest."

COMPETITION RETIRES.

Three hundred thousand dollars' worth of superbly made clothing, due to our large facilities in buying and manufacturing, second none in America, enables us to offer the largest, the richest and the most varied stock in spring and summer clothing, at prices simply unimitable.

Every mill of worth, at home and abroad, is represented in our stock of Clothing.

OEHM'S ACME HALL, 5 & 7 W. BALTIMORE STREET, ONE DOOR FROM CHARLES, BALTIMORE. 1889—This Month Only, May, 1889. We're Offering Bargains!

Bargains in Dress Stuffs! Bargains in Dress Trimmings! Bargains in Notions! Bargains in Shoes and Slippers! Bargains in Carpets, Mattings, &c.

TO the Buying Public and Customers generally. The special bargains, being up bargains, unique and exclusive bargains, in Dress, Trimmings and Notions, are now on hand. They are ready to sell. They are ready to sell. They are ready to sell. They are ready to sell.

Another bargain is a LADY'S BLACK HOSE, at 25 cents per pair, absolutely fast. There is another bargain in which we give absolute value for the money. It is a pair of DAMASK, in widths 36 and 40 inches at 25 and 30 cents per yard. Perfect fit.

Now we are going to sell off some of our bargains in BOOTS, SHOES, SLIPPERS, &c. The old-time way of putting up Ladies' Shoes and Children's Shoes, is out here—individual care is used—so close on unlined goods we're going to make a price on them. We have a lot of class of goods at a lot of Maudslayi's Solar Tipped Shoes, at 10c, as well as other per cent.

Respectfully, May 4, 1889. R. F. PARKS.

WM. T. HICKS, Undertaker and Funeral Director, GALENA, MARYLAND.

I beg leave to inform the public that I am now prepared for the CHESTERTOWN BURIAL, Oak, Office, through, Burial, Oak, kept constantly on hand and furnished upon short notice at prices to suit the times. With three years' experience I can guarantee to execute all orders in a satisfactory manner. My notes kept respectfully. WM. T. HICKS, 427 1/2.

How They Are Robbed. A poor Irishman was arrested the other day for violating a corporation ordinance of which he had never heard, and was taken to the Tombs police court. On the way into the courtroom a court officer led him aside and whispered to him: "Get a lawyer!"

"The Irishman shook his head. "Well, if you've got \$5 I can get you a lawyer who will fix you all right." The Irishman sorrowfully produced five days' wages and was taken to a shyster lawyer. He was arraigned before the justice, and, in spite of the lawyer, was fined \$5. Not having any more money, he was locked up.

The \$5 was divided between the lawyer and the court officer. This is a regular scheme practiced in every police court. The lawyers divide the fees they obtain with the officers who steer the clients to them.—N. Y. Sea.

A CHILD-MAN.

Extraordinary Discovery by a Doctor in Kansas—One of the Most Remarkable Human Monstrosities. There has just been discovered in the southern part of this (Dickinson) county, writes a Kansas correspondent of the Globe-Democrat, one of the most remarkable monstrosities of the human family ever known to exist in this section. It is a child-man or rather a child's body with a man's head. A few days ago a prominent physician was making a call on the family in which the monstrosity lives, and while talking with his patient he noticed an object in a cradle at the opposite end of the room. It was carefully covered up, but he thought he perceived a head showing from beneath the covering. He could get no opportunity for a more full examination at the time, but in order to investigate further, informed his patient that other calls would be necessary. Upon a subsequent visit he managed to get into the room with the cradle and its mysterious occupant. Hastily pulling off the covering there was discovered a sight which made his heart cease for the moment to beat. It was nothing less than a man's head joined to an infant's body. The large eye hinked at him, and the lips, bearded and mustache, made inarticulate sounds, but no gleam of recognition or intelligence was observable in the "being's" face. Determined to investigate the matter more fully, the physician called the man and woman of the house, and demanded an explanation of the sight which had met his gaze. At first they were angry that he had pried into the secret that they had guarded so well, but at last, seeing that further concealment was impossible, they made a clean breast of the affair and told the process it looked like nothing so much as a highly magnified white marble, such as a giant might use in the game of billiards. The iron rod running through the center of the original model and projecting at both ends through the surface has left holes in the new globe, which serve very well for the North and South poles, and through these a metal axis is run to represent the axis of the earth. To be perfect the globe must revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another. If it does not do so it must be balanced by boring a hole in the lighter side and fastening within it a little bar containing as many shot as will revolve slowly upon its axis when the latter is held horizontally, without exhibiting any disposition to stop with one side up rather than another.
