REGULAR BOTTLE, 25 CTS.

Dr. Bull's Cough Syrup contains no morphine or chloroform. It is safest and best.

TO INVESTORS:

AT a meeting held on February 7th, 1912, of the Stockholders of THE BALTIMORE CASUALTY and GUARANTY COMPANY, the capital stock and surplus of this company was increased to $1,000,000 from $200,000 which was fully subscribed. A limited amount of this increase is now offered to the public at $50.00 a share, payable when entire amount is subscribed.

This is a rare opportunity for the public to purchase some of this stock before the books are closed. The character of the management of this Company together with the success which has marked the companies now doing this character of business is a guarantee that the stock will soon be selling at a premium. This company has secured the services of a body of experienced surety men to take charge of the different departments, and a large line of business is assured. Books are open for subscription at the following banking houses:

HAMBLETON & CO.,
10 South Calvert Street.
SUTTON, STROTHER & CO.,
Calvert and German Streets.
WHELAN, DUER & LANAHAN,
Calvert Building,

and at the offices of the Company, No. 200 Maryland Trust Building, Baltimore, Md., where prospectus and full information can be obtained, either by calling in person or by correspondence.

J. BARRY MAHOOL, President.
ROBERT S. MASLIN, Secretary.

FARMERS' INSTITUTE!

Held at Kennedyville And Chestertown This Week—Expert Farmers Address Kent's Sturdy Agriculturalists on Various Subjects.

Kennedyville farmers numbering 50 in the morning and 80 in the afternoon attended the farmers' Institute Monday and about the same numbers were present at the Chestertown meeting Tuesday notwithstanding the rain and snow. Mr. Philip G. Wilmer presided at the latter meeting. Among the speakers were Dr. Hill, W. Oscar Collier, E. I. Oswald, Dr. Haswell, Prof. Tollinger.

Dr. Hill, superintendent, strongly advocated the teaching of agriculture in the public schools and spoke approvingly of children attending the Institute. He stated that this is the fourth State in the production of canned corn and peas, and the first in canned tomatoes; in fact, it produced almost one-half of the canned tomatoes of the country, and grew more strawberries than any other State. He said he doubted the statement, made some time ago in this county, that in the matter of tomato growing the productivity of our lands was declining. It is the duty of the farmer, said Dr. Hill, to produce all things necessary for the needs of his family table, for feeding his live stock, and for the fertility of his soil, and likewise all farming stock for his purposes. In the last named obligation our farmers fail, said the speaker, greatly to their own loss. Why are there so many mule sales? Why such high prices for mules? The farmers are derelict in the matter of mule-raising, said the speaker. These necessary animals can be raised at much lower figures than they can be bought from distant States, he declared. Some of our farmers are paying twenty to twenty-five cents per pound for mules brought in from the West, and raising steers and selling them at six cents per pound! If there is a profit in the steers there is certainly a great waste in the buying of the mules from other States, for mules can be more cheaply raised than can steers. Stop paying spring chicken prices for second-hand Missouri mules, admonished Dr. Hill, and you will stop a big leak of farm revenues.

Good Seed Corn

Mr. W. Oscar Collier's address on good seed was most interesting as well as most timely. In substance he said that experience is the best teacher, and it has taught us very valuable lessons in the matter of seed corn. On all of Mr. Collier's farms, in Talbot, the proper care in seed development and seed selection has much more than doubled his corn yield on every acre he tills in corn. His yield is now over ninety bushels to the acre.

Seed may be ever so well bred but if it fails to germinate it is worthless for seed purposes. Or it may germinate and produce a plant lacking vigor as to be unworthy of the space it occupies. It is therefore of utmost importance that every farmer inaugurate a system by which he can discriminate between ears of corn possessing high germination and vitality and the reverse. The importance of testing the seed before planting this spring was never so apparent as now. The late rains of last fall filled the grain and cob with an abnormal amount of moisture which, in the large eared varieties, was not sufficiently evaporated before freezing weather set in and incalculable damage has resulted therefrom. A test for germination was made during the past Christmas holidays. The corn was taken from a crib seven feet wide, with an air chamber extending the full length of the crib through its center, being twelve inches wide at the floor and four inches wide at the top, which admitted a free circulation of air through the entire center of the corn. I mention the above conditions to show the construction of the building as one exceedingly favorable for the rapid curing of corn. The test showed a germination at this time of ninety-five per cent. strong and vigorous.

On January 29th another test was made with corn taken from this crib to ascertain the damage done to the germ resulting from the extremely low temperatures just experienced. This test revealed the fact that out of thirty-two apparently first class seed ears but three could be possibly accepted for seed purposes. Twenty-two ears failed entirely to show any signs of germination; the cell germs being entirely frozen, the other seven ears having their vitality so reduced as to show weak germination so as to make them entirely unfit for seed purposes. The lowest temperature this corn was subjected to was below zero. There is but one conclusion to be reached and that is each year of corn must be tested for germination before planting. Failing to do so the farmer invites serious loss as a result of a poor stand of corn, and much of that secured of low vitality, meaning low yielding power. As it requires but twelve to fifteen ears (depending upon the size) to plant an acre, it is not such a task as most farmers think to test each ear intended for planting. The test boxes can be made out of any light material about eighteen inches wide, four feet long and about four inches deep. Two inches of saw dust or sand should be placed in the bottom of the box, a piece of muslin the size of the box should be marked off in squares two inches each way and each square numbered. This should be pressed smoothly on the saw dust or sand. You are ready to begin the test by first sprinkling with warm water the cloth and material beneath it. Remove six grains from the ear, beginning half of an inch from the butt of the ear, gradually turning the ear as the grains are being removed, taking the last grain from about two inches of the tip end. Care should be taken not to damage the germ of the grain if removed with a pointed instrument. Place the six grains taken from the first ear on square number one; either tag this ear number one or lay it on a bench or floor where it will not be disturbed; the second ear treat as the first placing the six grains from this ear on square number two, laying this ear beside number one, and so on until the box is filled. Place over the grains a piece of muslin cut several inches larger each way than the box, pressing the muslin around smoothly over the corn and covering with an inch and a half of saw dust or sand. Just moisten with warm water and put in warm place. In cool weather the corn should not be examined by number on the square. For instance, if square number two showed poor germination simply eliminate ear number two and so on until all the poor ears, rejected by the germination box, are thrown out. The same sand or saw dust should not be used for the second test, or if used it should be thoroughly sterilized. Seed thus treated requires much less to plant an acre and farmers once adopting this method of testing for germination will find it one of the most important factors for increasing their yields.

Poultry on Farm.

Mr. E. I. Oswald, one of Western Maryland's successful farmers and fruit growers, who makes poultry also very profitable, gave an instructive talk, showing that all farmers may make poultry more valuable. He said the poultry industry of this country is really of much greater importance than the public realize. The income from poultry is more than that derived from the expansive wheat fields of our land and more than half of this poultry comes from the farms, where, as a rule little careful attention is paid to it. What an easy matter it would be to make this part of the income of the farmer much greater than it is. The poultry industry in Maryland, while not as large as in some of the States, is a great source of income to many thousands of people.

The success of the business depends largely upon the intelligence of the person engaged therein as well as the time and attention given the work. The income from the poultry business in Maryland would doubtless be vastly increased if the flocks were more carefully selected as to age and breed; if the fowls were better housed and protected from bad weather, and properly fed, especially in winter, when it is possible to greatly increase the egg supply and thus add to the revenue. And the marketing, too, is very important in building up one's income. Keep in mind the fact that eggs, to bring their best price, should be clean, fresh and of uniform color. With such eggs one can easily find a special market and get several cents per dozen extra for all eggs delivered.

Speaking of chicken houses Mr. Oswald said practical experience has proven that the open front or muslin front chicken-houses are clearly the best, as fowls from these are much less liable to disease. The open front provides the means of sunning the house. This is essential, particularly in the rough weather of mid-winter, when the whole flock should be kept within doors all the time. The form of building most desired, the speaker said, was called the colony-house and was built on runners. The colony-house is recommended very strongly for the farmers where they have waste land around the farm buildings, and have a chance to move the chicken-house to fresh spots, thus changing the ground and thus avoiding disease-infected yards.

Chicken-feeding should be done regularly and a good grade of feed used. The most successful poultrymen are using grain feeds made of equal parts of wheat, cracked corn, oats or buckwheat, mash made from wheat bran and milk, milk being recognized as a great poultry food and egg producer. There must be a plenty of fresh water by them all the time. Chicks just hatched should not be fed for a day or a little more. At this point in their lives especially good care should be given. Here is a first-class receipt for a good feed for the young chicks of from one day to several weeks old. It will tide them over danger points: Three pints of corn meal, one pint of wheat bran, half pint of oat meal; one tablespoonful of meat meal; one teaspoonful of baking soda. Stir altogether and make into a dough, and bake fully four hours. Crumble this pone, a little but at a time, to the little chicks. This feed will prevent many ills the young fowls have seemed to be heir to, and will start them off healthy and strong. It would be well for every poultry-raiser to note the proportions of this food, make a full record thereof and follow these suggestions carefully and then they would have little to fear as to the result.

Mr. Oswald again referred to the important matter of cleaning the henhouses, there being nothing but failure with filthy houses, he said. The houses should be frequently—every day or two—cleaned and the lice kept down. Take one gallon of coal oil and one tablespoonful of carbolic acid, and spray the mixture all through the houses. This, on the roosts, will, in addition to killing all vermin, prevent the scaly-feet.

Prof. Tollinger spoke on limes while Dr. Haswell talked about drainage. Dr. Haswell is a government expert on this subject now located at Easton and is ready to assist the farmers of Kent in this matter of drainage.

MR. HUBBARD CANNOT SERVE

The following letter from Mr. W. W. Hubbard to Senator Beck explains itself:

Chestertown, Md., March 9, 1912.

HON. W. W. BECK,
State Senator,
Chestertown, Md.

Dear Sir:—In the current issue of the KENT NEWS I read for the first time the bills providing for the erection of the new school buildings in our county and also providing for the enlargement and improvement of our Court House, and that I had been named one of four to supervise the construction of the latter. It is in regard to this I write you to say I could not entertain accepting such an appointment for the following reasons:

First—I believe that not only the bill for the new schools, but the enlargement of the Court House, should be referred to the people or taxpayers and voted upon.

Second—I believe if this was done, and in view of existing conditions, that neither the schools or Court House plan would be carried out, notwithstanding personally I would be glad to see all these improvements made for the "pro bono publico."

Third—And my chief reason is, I have more now to attend to than I should, and have determined not to accept anything else. Will you kindly therefore substitute someone else in my place. Very truly yours,

WILBUR W. HUBBARD.

WHERE DOCTORS FAILED TO HELP

Lydia E. Pinkham's Vegetable Compound Restored Mrs. Green's Health—Her Own Statement.

Covington, Mo.—"Your medicine has done me more good than all the doctor's medicines. At every monthly period I had to stay in bed four days because of hemorrhages, and my back was so weak I could hardly walk. I have been taking Lydia E. Pinkham's Vegetable Compound and now I can stay up and do my work. I think it is the best medicine on earth for women."—Mrs. JENNIE GREEN, Covington, Mo.

How Mrs. Cline Avoided Operation.

Brownsville, Ind.—"I can say that Lydia E. Pinkham's Vegetable Compound has done me more good than anything else. One doctor said I must be operated upon for a serious female trouble and that nothing could help me but an operation.

"I had hemorrhages and at times could not get any medicine to stop them. I got in such a weak condition that I would have died if I had not got relief soon.

"Several women who had taken your Compound, told me to try it and I did and found it to be the right medicine to build up the system and overcome female troubles.

"I am now in great deal better health than I ever expected to be, so I think I ought to thank you for it."—Mrs. O. M. CLINE, S. Main St., Brownsville, Ind.

Who had the only perfect team score in this year's Glidden Tour?

Maxwell

who had the best team score in last year's tour?

Maxwell

who won the Anderson Trophy for the best individual score in this year's tour?

Maxwell

who won the Deming Trophy in the 1908 Glidden Tour?

Maxwell

who won the Sweepstakes Trophy in the 1910 Munsey Tour?

Maxwell

who won the Individual Car Trophy in the 1910 Munsey Tour?

Maxwell

What does all this prove?

It proves the consistent reliability of the Maxwell. These tours are not races where specially prepared cars thunder around a track at dangerous speed for a few hours. They are journeys of long duration over natural road conditions which subject a car to a most severe test of its ability to meet and overcome the obstacles likely to confront the average automobilist.

That the Maxwells have so consistently been victorious in these tours demonstrates its right to your consideration and choice if you are thinking of buying a motor car.

There are five Maxwell models ranging in price from $900 to $1400. Let us show them to you—let us take you for a ride in one. We'll come to you, if you say so.
