HORTICULTURE.

TREATMENT FOR SCAB.

How to Disinfect Seed Potatoes with out Going to Much Work and Needless Expense.

To make the solution, first get a good-sized wooden tub, tank or wide barrel. Dissolve two ounces of corrosive sublimate (biehloride of mercury) in two gallons of boiling water; then add water enough to make 15 gallons. If needed, make double this quantity. Stir until thoroughly dissolved. It is a good plan to have the tank, or whatever it is, stand upon a bench or other support high enough so you can put in a faucet for emptying the solution when

TREATING POTATOES FOR SCAB.

done using into some other convenient receptacle. If you have a basket-maker living at no great distance from you (as I have) you can get him to make a plain, strong open basket of the shape as that shown in illustration, large enough to hold about a bushel of potatoes. Or if such a basket is not at hand or cannot be procured, then you can take a coarse gunny-sack and fill it with potatoes. Whatever receptacle you have, immerse it with the potatoes into the tank or tub, and leave it in about 90 minutes. Then lift the basket or sack out of the liquid, empty the potatoes out to dry, and fill with a new lot to go through the same performance. When the potatoes are dry, cut as wanted and plant. Do not let any of the treated tubers lie around, as they are liable to poison any animal that would get hold of and eat them.—Farm and Fireside.

ORCHARD COVER CROPS.

Their Value and Advantages Officially Recognized by the Agricultural Department.

The growing of green crops in an orchard should not be done with the view of scattering crops for use, but to benefit the trees as a covering. The agricultural department has given this matter its attention and pointed out the advantages in a special bulletin. A cover crop, to serve as a blanket and protect the soil, may be secured with the use of mammoth clover, cow peas, buckwheat, rye, crimson clover or anything that will remain on the ground all winter. Cover crops, unlike those grown throughout the season, do not, as a rule, injure the trees by drying out the soil, and even where the weather during the fall is normally dry, the injury is less than in summer, since plants evaporate less water from their leaves in the cooler weather and shorter days of fall than in the longer and hotter days of summer. Cover crops not only do not, as a rule, dry out the soil injuriously, but they also add directly to the moisture holding capacity of the soil by the humus formed in their decay, and they hold much of the snow until it melts and is absorbed by the soil. They are also rarely as injurious as crops grown throughout the entire season, and are often beneficial because their growth is made after the trees have stopped growing and are maturing their wood for winter. Trees make their greatest growth early in the season, and therefore require much less moisture, the latter part of the season than earlier in the year. In fact, in some localities it is considered an advantage to cease cultivation by midsummer and grow some secondary crop which will check the growth of the trees and cause them to mature before winter. It has also been found that wherever cultivation or irrigation has been kept up late in the season, and the ground in a moist condition, with the trees thrifty and growing, the frost did but little damage.

Fertilize the Orchard.

It is certain that any crop will exhaust the soil in time, whether of grain, grass or fruit. On some farms may be seen orchards of apple trees over half a century old. Every year these trees have produced fruit, and in return have received nothing in the form of fertilizer. It is estimated that an ordinary apple crop removes from an acre of soil about 50 pounds of nitrogen, 40 pounds of phosphoric acid and 75 pounds of potash. When clover is grown in the orchard the land is benefited by having its proportion of nitrogen increased, but it will gain nothing in mineral matter. The land devoted to apples should receive fertilizer or manure every year, and when there is a heavy crop of apples in sight the fruit should be thinned out in the early stages of growth.—Rural World.

Size of the Farm Garden.

Unless there is a convenient market for the scale of vegetables the garden should be no larger than is necessary to afford full variety and an abundance for the family, as the keeping down of weeds and grass in the garden is a matter which may require attention just at a time when the farmer is busy with his spring planting, but every farmer should have a garden, even if but few kinds of vegetables are grown.

THE NEXT FRUIT CROP.

Outlook Is Not Quite as Disheartening as It Would Appear to Most on First Thought.

The coming season will not be as noted for its abundant crop of fruit as last. The excessively cold winter has killed so many trees and vines that we can hardly expect to have much more than a half or three-quarters of a crop, and in some localities even less. Consequently there was never a season when more attention was needed in the orchard, for by giving better culture to the fruit it is possible to make some amends for nature's shortcomings. There is always one redeeming feature about a small crop. Prices are apt to be higher, and this sometimes brings them up to a point where profits are more satisfactory. In years of excessive fruit yields the profits to the growers have more than once been so small that they hardly paid for the time and labor bestowed upon their culture. A smaller crop with better prices may not be so good to the consumer, but it is apt to be better for the farmers' pocketbooks. Thus the outlook for fruit growing this year may not be quite as bad as would appear at first thought.

But there is need of preparation for it. More than ever is it necessary to give the trees and vines good cultivation, and protect them from the ravages of insects and disease. There is probably no orchard where the culture is so good that it could not be improved a little. By studying the trees carefully, and giving the best attention to the fewer number of trees that have withstood the cold, we can surely increase the yield to some extent. The outlook is not a matter for sorrow or regret so much as it is one for renewed effort to better culture.

In the first place it will pay to go through the orchard and cut out all except the trees that promise a fair crop. This is no time to nurse half dead trees. Either cut them back, or dig them up and replace them with others, and then give all the attention to the remainder. Sometimes there is life in a tree, which will spring up and thrive if the tree is cut back enough, but if left just as it is it will exhaust itself trying to distribute itself over a wide area. The pruning knife is sometimes the best friend in a season like this.—C. S. Walters, in Journal of Agriculture.

SIMPLE GREENHOUSE.

A Structure Which Enables Gardeners to Get Considerable Space at a Low Cost.

Probably the most satisfactory low-cost greenhouse for forcing vegetables is found in the form of a half-span house facing the south or southeast, and having a comparatively flat roof composed of movable or partly movable sash, the front wall of the house also to be partly glass, in order to give

SIMPLE GREENHOUSE.

abundant light to the front bed or bench. A house of this character, and of moderate size, may be roofed with two rows of sashes seven feet long, the lap or junction of the two sashes in the center of the roof being supported by a wooden girder formed of a piece of three by four stuff resting on posts, the latter being spaced about eight feet apart. This length of roof would give a house nearly 13 feet in width, with front wall five feet high and back wall 7½ feet, and may be divided into three beds or benches of convenient width for working.—Rural New Yorker.

HORTICULTURAL HINTS.

We do not advise extensive melon culture. The markets in summer are usually glutted with melons.

Sweet corn comes up much sooner if it is soaked over night in warm water, and the crop is fit for use just that much sooner.

Potatoes grow better if planted before beginning to sprout. The second sprouts that start are not so strong as the first.

If the trees need pruning, it is easier to prune as soon as the necessity shows itself than it is after several seasons of neglect.

Potatoes will make good use of a large quantity of coarse manure, whether it is plowed under or put on the land after planting.

It is a good plan to mulch raspberries, as it has been shown that mulched plants will produce much better berries than those left unprotected by drying winds.—Western Plowman.

Black Knot in Plums.

Before warm weather comes all the plum trees should be looked over, and any that show marks of black warts that indicate black knot should be removed with a sharp knife and the wound washed with carbolic acid solution or some other antiseptic. In fact, it is a good plan to spray plum trees with a carbolic acid solution, made one part of carbolic acid to 2,000 parts of water. This will remain on the spores which are dormant during the winter until they burst their bounds and begin to spread the disease over the trees. The solution named is much stronger than can be applied after the foliage is in its tender growth.

USE PRISON LABOR.

Judge Gibbons, of Chicago, Advocates the Employment of Convicts as Road Builders.

The proposition to utilize prison labor in the work of building roads is being discussed everywhere. There is a disposition manifested on the part of public officials to employ prison labor on this class of work, wherever it is possible. In a recent address, Judge John Gibbons, of Illinois, said:

"The number of convicts in Joliet averages 1,000 at all times, and every one of these might be put to work making good roads or preparing the material for their construction. I would use this labor in building a great highway from Lake Michigan to the Mississippi river, and from some point on the northern boundary of the state to Cairo or some equally advantageous town. I would utilize the labor of the prisoners in the county jail and in the bridewell in building a sea wall to reclaim lands covered by Lake Michigan, and convert them into the most magnificent park in the world, stretching from the Indiana line on the south to and beyond the city of Evanston on the north."

Railways and Roadways.

When a railway company undertakes to extend its tracks, or to put in a switch, or do any other work of this sort, the first thing done is to have their engineer—an educated and trained specialist—prepare the plans, set the stakes, and superintend the job. They never trust a booby; they do not trust even an experienced roadmaster, except with expert supervision. When our county commissioners are charged with the care of a road, they push the responsibility on to some ignorant pike commissioner, and apparently trust the devil to superintend. He does usually, and very effectively, with the result that we get less for our money than any other county hereabouts.—Dayton (O.) Herald.

Has the Twisting Helped?

The twisting we've given the lion's tail—
Has it to do or not.
With that member taking its present form—
The form of a true-lover's knot?
—Puck.

Gorman the Trickster.

BALTIMORE, MD., June 3, 1899.

Mr. Editor:

Ex-Senator Gorman positively refuses to stay politically dead and buried. In 1895 he was hit with the sandbag of public opinion and it was announced officially that he would no more trouble the roseate dreams of the Maryland Democracy. But, alas, the gentlemen most interested in keeping Gorman dead made the fatal mistake of not obtaining Gorman's acquiesence in the matter, and now he comes forth to plague them with his persisent presence.

"If my health continues to improve," say the ex-Senator, "I shall take an active part in the campaign in Maryland this fall, doing what I can to help my friends along."

Now here indeed is a promise that will be hailed with joy by the enemies of the ring rule. Gorman to lead the State campaign and help along his friends! What does this mean? It means this, nothing more and nothing less—Gorman is to take unto himself the prestige of the victory which he thinks will come to the Democratic party this fall. His "friends" are those who will help to this end, and whose interests are intertwined with his own. Rasin, for instance, in Baltimore city is one of the "friends" that Gorman will help along, and who, in turn, will help Gorman along. His influence is already felt in the chamber of the newly-elected City Council of Baltimore and its presence has called forth warning editorials from papers that were but yesterday declaring that "Rasinism" was dead and that the result of the municipal contest could not effect the situation in the State. Gorman remained in apparent retirement during the city fight, but now announces that he will take a hand in the battle for supremacy in the State. He has nothing to lose and all to gain by the outcome and he knows it. With Gorman and Rasin again at the head of the Democratic organization we may expect a swift reversal of the present healthy condition of public affairs in Maryland and a sliding back into the dark and devious methods in vogue before 1895.

The question now arises whether the voters of the State, Democrats as well as Republicans, and independents as well as both, will consent to any such proceeding.

TAXPAYER.

Peninsula Dairy Farming.

Work has been begun on the big experimental dairy farm of the Carlisle brothers near Frederica, Del., an enterprise that excels in size any agricultural undertaking in the Eastern States. Dr. Paris T. Carlisle, of Frederica, and Dr. Lester L. Carlisle, of Milford, brother, and both men of means, having had a life-long experience in agricultural pursuits, have decided that the business of dairy farming can be carried on upon a large scale to far greater advantage than in a limited way. Their fine farms were therefore united and plans for their undertaking were announced upon which the work of building has been begun. As a safe store-house for various pure grain, a modern barn will be first erected. It will be 125x50 feet, and contains three silos, with a capacity of 750 tons. Near this will be the main cow stable for sheltering in bad weather the thoroughbred cattle with which the place will be stocked. It will be 312x33 feet, having stall capacity for 150 cows. As soon as work on these buildings is completed, another barn of the same size and dimensions as the first will be built.

Work will also begin on the creamery building, a substantial structure 122x40 feet, which will be fitted with aereators, separators, and all the modern improvements for cream, butter and cheese-making. Another building, for the storage corn and 30 feet wide, will complete the storehouse. These structures will be of iron all over, and the construction of an office 12x24 feet will also be prosecuted with the same material.

Five tenement dwellings, for herders, farmers and engineers will constitute the remaining work for this summer, during the building of which the plant will be in full operation. Portable engines and hydraulic jacks will be used in the construction of these buildings.

Reina Mercedes at Norfolk.

The former Spanish cruiser Reina Mercedes, the first large naval trophy of our war with Spain, reached Fortess Monroe from Santiago on the 21 ulto., in which port she was sent to the bottom by her own crew and shells of the American blockading fleet nearly one year ago. She is full of barnacles inside. Her forward funnel was riddled by six-pounders, and the places where the ten and five inch shells pierced her through and through are still plains ly to be seen. These shells must have done terrific execution among her crew. They exploded in passing, and wrecked the entire interior of the ship, which will have to be wholly restored. Her port side is badly warped, and many of the plates must be replaced, but in general the hull is in good conditions. Two of her forward five-inch Hontoria guns are still aboard, and two torpedoes. Her engines appear to be in good condition. She will be towed to the Norfolk Navy Yard and there the work of repairing her will begin as soon as possible. Upon its completion she will be added to the Navy.

That Throbbing Headache

Would quickly leave you, if you used Dr. King's New Life Pills. Thousands of sufferers have proved their matchless merit for Sick and Nervous Headaches. They make pure blood and strong nerves and build up your health. Easy to take. Try them. Only 25 cents. Money back if not cured. Sold by George & Redden, Druggists. 1 5

Old papers for sale at this office at your own price. *

WEATHER FOR JUNE.

Hicks, the renowned weather prophet, says: Electrical phenomena with high temperature, rain and hail, will be most natural. Rising barometer, westerly winds and much cooler weather will follow behind these disturbances, beginning about the 1st, to the west and north, and advancing eastward over the country and touching the 2nd and 3rd. The barometer will fall, cloudiness will ensue, and storms of wind and rain, attended by much hail and thunder in many sections, will culminate about the 4th, 5th and 6th. The moon is at her extreme north point on the 7th and is new on the 8th, the general tendency to thunder showers and storminess will bridge over the interim between the period 3rd to 6th, and reactionary storm days, 9th to 12th. We shall not be surprised to hear of touches of frost far northward, about the 11th to 14th. A regular storm period is central on the 16th, covering the 14th to 18th. During the 16th, 17th and 18th, these conditions will grow in extent and intensity causing many storms of very marked lightning, thunder, rain and hail in their eastward passage over the country. Daily squalls of showers and wind, with electrical displays all round the heavens during the evenings, and often throughout the night, are the regular and normal results during all this part of June.

The 22nd to 24th is a storm period exactly at the point where the earth begins to turn backward, or westward, from her extreme elongation eastward from the sun. A decided rise of barometric pressure and change to very much cooler will indicate the termination of this and all other storm periods for June. The last storm period for the month will be central on the 27th, extending from the 26th to 29th. This period will culminate on and touching the 28th and 29th, moon being on the equator and at last quarter on those dates. Look for very high temperature, low barometer and active thunder storms. Cooler, fair weather with rising barometer will advance from western parts as the month goes out. Upon the whole, we predict that June will bring ample rains to most parts of the country, with too much, perhaps, in many central and southern sections.

We admonish all haymakers and harvesters that June showers will jeopardize their crops unless care is exercised as to times of cutting and manner of protecting. Reap with full force and speed, promptly as the rising barometer succeeds storm areas and put into secure shape before the on coming of the next storm cycle. At best, June solstice showers will baffle the efforts of many, but those who understand and follow these forecasts and suggestions will greatly minimize their risks, perplexities and losses.

MATTERS OF INTEREST.

Peaches are expected to be plentiful in the vicinito of Wyoming; Felton and Harrington this season.

Messrs. McBee & Kimberly, of Baltimore, have rented the Hotel Bolingly for this season and will take charge about June 1st.

John Lyons, a farmer near Harington, Del., who was bitten by a vicious dog nearly a year ago, is showing symptoms of hydrophobia.

Mrs. Betsy Harrington, aged 83 years, mother of ex-Speaker of the Delaware Senate, Hezekiah Harrington, died at Harrington, Del., last week.

The ladies of Queenstown and vicinity gave a supper last Friday and Saturday evenings for the benefit of the proposed Queenstown fire company.

Mr. David Hurlock sold at private sale last week a farm owned by him, situate in Queen Anne's county, near Bridgetown, containing 300 acres, to Mr. Cole, of this county, for $6,080.

Ground has been broken for the new shirt factory at St. Michaels. The main building will be 26x40 feet, and will contain twenty-five machines. The capital stock of the company is $5,000.

The Baltimore American says: "The laying of roads and the extension of telephone systems on the Eastern Shore are bringing that Peninsula so close to Baltimore that it is virtually a fertile and beautiful suburb of the city, which is likely to become one of the richest trucking sections in the country.

The Henlopen House at Renoboth will be conducted the coming season by John Sayers. The dancing pavillion will be in charge of A. S. Webster. His son, Howard Webster, and Frank Wilson, of Wilmington, and James D. Fullen, of Philadelphia, will be in the orchestra. The house will be opened June 15.

At the joint meeting Tuesday of last week of the county commissioners and school commissioners of Queen Anne's it was decided to build a high school in Centreville. The school board is to sell Centreville National Bank stock owned by them to furnish the money needed. The building is estimated to cost $15,000. The site for the building has not been selected.

Robbed the Grave.

A startling incident, of which Mr. John Oliver of Philadelphia, was the subject, is narrated by him as follows: "I was in a most dreadful condition. My skin was almost yellow, eyes sunken, tongue coated, pain continually in back and sides, no appetite—gradually growing weaker day by day. Three physicians had given me up. Fortunately, a friend advised trying "Electric Bitters, and to my great joy and surprise, the first bottle made a decided improvement. a continued their use for three weeks Ind am now a well man. I know they saved my life, and robbed the grave of another victim." No one should fail to try them. Only 50cts per bottle at George & Redden's Drug Store. 5

CASTORIA

for Infants and Children.

The Kind You Have Always Bought

BEARS THE SIGNATURE OF

Chas. H. Fletcher.

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY.

PENINSULA HEADQUARTERS

MACHINERY AND FARM IMPLEMENTS.

No House in Eastern Maryland carries a heavier stock of Machinery and Improved Farm Implements than does this, and by the aid of appreciative patrons we have this season the largest and best stock of these goods ever exhibited. We keep almost everything in our line from a "toothpick to a steam engine.

We want to speak to our good friends over in Caroline and introduce them to some "Talbot Bargains" We have them right here. You can put both eyes on them and see for yourself. Prices are so low you will find something saved by coming to see us

STEVENS and PITTS ENGINES and THRESHERS.

These two favorite makes are still sold by us. Samples on exhibition. We have found none better, and today we have numbers of friends in this State and Delaware praising their value. If you think of buying any Steam Machinery this year don't fail to see us. We also sell the REEVES' STACKER. We can save you money.

South Bend Chilled Plows, Oliver Chilled Plows, Economist Plows, New Ground Grub Plows (the best and cheapest we have ever seen,) Sulkey Cultivators, Disc Harrows, Drag Harrows, Field Rollers, Plow Castings, Corn Shellers Fodder Cutters

any many other minor articles not necessary to name. Among other things however, we want to make special mention of the

Auburn Steel-Axle Farm Wagon,

We sell more Farm Wagons than all others combined and that's because they are the Best Wagon, by far, in this market.

CARRIAGES AND HARNESS.

Don't put cash into anything "shoddy", especialy a carriage. You'll regret it ever and always. Such things get on the market, only to sell regardless of value, and some people find it out too late. We have just received a stock of carriages, that are built on honor, out of the best materiels and will satisfy you in long service. They are handsome and cheap See us or write.

Corn Planters and Buckeye Cultivators.

The Tiger Corn Planter Embodies the latest and best ideas in corn planting. Steel Check Rower Heads, Angle Steel Frames, Steel Hoppers and and High Wheels. This planter is so simple that a boy can work it. It is the "King of the Corn Field."

FINE BICYCLES FOR 1899.

We are the the pioneer dealers and Headquarters on Bicycles. We brought to Easton the first wheels sold. Since then we have sold Hundreds in this and the adjoining counties. We keep by far the largest Stock of bicycles ontside the Cities, and are prepared to give you the very best prices. Appreciative buyers are right with us. We sell the renowned RAMBLER, CRESCENT, STORMER, IDEAL, READING SPECIAL, MARS, WINNER and PENANT. We are in the Front Rank with the best bicycles made, and that too at a price so low that almost any one can afford to buy a wheel.

THE MOST COMPLETE REPAIR DEPARTMENT.

We venture to say we have the most complete repair department on the Peninsula. We have an "Expert Bicycle Doctor" that can "cure any ailment" at short notice and still shorter cost. Try us.

PAINTS IN ALL COLORS.

Put up in all size cans and in all colors. If you are going to do any painting this season call and see our immense stock. You know all about the high standard of Longman & Martinez, John Lucas & Son, and the Monarch. They are known the world over. We can save you money, and give you perfect satisfaction. Call and see us on paint.

REMEMBER US ON BINDER TWINE

and keep in mind we are in partnership with the people, and will give all the advantags it is possible for any well-regulated house to do.

YOUR FRIENDS,

Shannahan & Wrightson Hdwr. Co., Easton, Md.
