

POULTRY YARD FENCE.

The One Here Described Is Economical and Is Sure to Keep Cockerels from Fighting.

Wire netting is very commonly employed by poultry keepers to fence their fowls in with but, though economical and easy enough to string upon stakes, it has its disadvantages. For one thing, chickens will go under it unless a board extends along the whole length of the fence at the bottom, or unless pegs have been driven

GOOD POULTRY FENCE.

every few inches to hold the bottom of the wire tightly to the ground. If the netting is used as division fences between yards, and there are male birds in the different yards, it will be necessary to have a number of boards at the bottom to keep them from fighting each other.

All this can be very easily obviated, however, by building a lath fence, such as is represented in the accompanying illustrations; and as it is not at all difficult of construction and will give a good appearance to any poultry house, especially when a division fence is desired between two yards to keep cockerels from fighting.—Fred O. Sibley, in Ohio Farmer.

TO CURE EGG-EATING.

Positive Reformation Has Followed the Method Here Outlined by an Eastern Farmer.

Almost every one has had trouble with hens eating eggs. Any one who has learned much from it will be glad to learn any way to prevent or cure it. A poultryman of experience says: There is nothing more provoking and more unprofitable than a flock of hens which have acquired the habit of eating their eggs. This is a habit more easily prevented than cured. Give the hens plenty of exercise with a variety of food. Gather the eggs frequently, provide sufficient resting places and keep one or more porcelain eggs upon the floor of the house. Dark nests are advisable, and a meat diet is excellent.

To cure the habit provide dark nests and add meat to the food. Remove the end from several eggs and pour out the contents. Make a mixture of flour, ground mustard and red pepper, adding a little water to hold the material together. Fill the shells and place upon the floor of the henhouse. The hens will make a wild scramble for these prepared eggs, will gobble down some of their contents, and will soon be gasping with open beaks. Follow up this treatment until the hens refuse to touch an egg. It seems and perhaps is somewhat severe, but no permanent ill effects will follow. The hens will soon learn that eggs are not so palatable as they regarded them, and will desist from the bad habit. Positive cures have followed this method. —Tri-State Farmer.

Poor Sort of Economy.

It is a poor economy that leads to the purchase of musty and even moldy feed for the fowls. When grain is spoiled too much for any other use it is the practice to try to save it by feeding it to the poultry. It is charged by fanciers that musty grain is a fruitful source of sickness. We cannot prove that point, but we are ready to accept it on its face. It is now well established that some of the smuts and molds are poisonous in their character. Especially is this the case with oat smut. Other smuts have been little examined with this point in view. Until they are proved to be innocuous let us feed our fowls only healthful grain.—Farmers' Review.

How to Prevent Runaways.

The man who wants to be sure of having a safe driving horse will do all in his power to prevent that horse from ever getting beyond control. If the horse gets to run away once, he is liable to be an unsafe animal ever afterward. It is a tribute to the good disposition and good sense of horses that more of them are not ruined by carelessness. Unsafe harness, neglect to fasten properly, careless or reckless driving, constant nagging until the horse is nervous and the infliction of pain in bitting or reining are common with young horses being broken to drive. It is a wonder that there are not more run-aways than now recorded.

The Hog on American Soil.

In an account of the introduction of swine into America it is stated that they were brought by Columbus to Hispanola in 1493, and to Florida in 1538 by De Soto; they were brought to Nova Scotia and Newfoundland in 1553 by the French, and into Canada in 1608. In 1609 they were brought into Virginia by English adventurers, and 18 years afterwards it is secorded that their numbers had so increased that the settlement at Jamestown had to be surrounded with palisades to keep them away.

LOCATION OF APIARY.

Timely Suggestions for Beginners in Beekeeping Who Don't Think They Know It All.

The best queens I ever owned were Italians, evenly colored, very bright golden, and of good size. Beware of the waspish, tapering queen that shows one or two golden bands and the rest of the body very dark. They are not so prolific as solid golden queens and were not so good workers in my apiary. Moreover, they were ready to fight at every opportunity. I prefer even color first, build next, and the more golden the better.

Some beekeepers make a great ado if anything is mentioned about a different sized hive or section from the one they are using. Such ideas would keep us all in the ruts together. A difference in the size of hives is very necessary to suit the great variations of climate. A shallow frame that would allow a large top surplus and winter the bees well in the sunny south, where they are confined in the hives only a few days at a time, would be very risky where the bees are confined from 60 to 90 days. It would not allow the bees to form in a cluster deep enough for safe wintering.

Large sections are easily disposed of among farmers, lumbermen and those who labor in shops, but city people who do light work like small sections the best. I have often thought a section that could be retailed for a dime would meet with much favor in the cities. Odd size sections insure fresh made ones, which are less liable to break than standard make, which are sometimes several years old and very brittle. Square sections do not look well. All the odd sizes I ever used were a little longer than wide.

Those who intend to purchase a site for an apiary should make a thorough investigation to learn what wild flowers or cultivated crops will produce honey for several years within a mile of the apiary. The experience of 40 years in bee keeping has caused me to believe there is but very little honey gathered outside of a radius of one mile from an apiary if there is a fair amount of flora within that distance. Of the several hundred lines of bees that I have followed to a termination not half a dozen went the distance of a mile.—A. H. Johns, in Farm and Home.

AN EXCELLENT COOP.

Serves as a Shelter from Sun and Storm and Guards Against All Peril at Night.

This excellent coop is three feet long, 30 inches high in front, and the panel swinging upon pivots, serves

WELL-PLANNED COOP.

by day as a shelter from sun and storm and when let down at night closes the coop effectually against all perils which might otherwise beset the young brood. The panel is made with cleats and when closed may be fastened by a button or bolt. If desired, one-third of the coop may be floored to afford a dry brooding place; this, however, is not necessary if the coop is kept on suitable ground. Means of entry and exit are secured through a small door in the rear.—Fred O. Sibley, in Farm and Home.

PUBLIC LOCAL LAWS.

CHAPTER 134.

An Act to incorporate the "Caroline County Law Library Association" and to provide means for maintaining the same.

Section 1. Be it enacted by the General Assembly of Maryland, That T. Pliny Fisher, Henry R Lewis, Albert G. Towers, Fred. R. Owens, Harvey L. Cooper and William H Deweese, and such other persons as may hereafter become members of the same and their successors, be, and they are hereby, created, a corporation by the name, style and title of the "Caroline County Law Library Association"; and by that name shall have perpetual successors, shall sue and be sued, answer and defend in any Court of Law or of Equity, and may adopt such by-laws, rules and regulations as may appear necessary and proper for conducting the concerns of said corporation as shall not be contrary to the laws of this State or of the United States, and the same may change, alter or amend as may appear proper; and may have, use, and at pleasure, change a common seal, and, in general, exercise all such rights, privileges and immunities as by law are incident or necessary to the corporation herein constituted.

Section 2 And be it enacted, That the capital stock of said corporation shall not exceed the sum of ten thousand dollars to be divided into shares of one hundred dollars each.

Section 3. And be it enacted, That one-half of the fines and penalties, hereafter paid imposed by the Circuit Court for Caroline County upon any person or persons convicted in said Court of any crime, and one-half of all forfeitures that may be collected by said Court by judgment or decree of said Court, shall be paid to said Caroline County Law Library Association and by it expended in the purchasing of law books for the use of said Association.

Section 4. And be it enacted, That the said corporation shall be capable in law to have, receive and retain to it property real personal and mixed, also devise and bequests of any person or persons capable of making the same, and the same at its pleasure to transfer, mortgage or otherwise dispose of.

Section 5. And be it enacted, That the Judges of the Circuit Court for Caroline County, for the time being shall have the privilige of the use of any and all the law books belonging to the said Association as fully as members thereof but no Judge shall take any book beyond the limits of the county.

Section 6. And be it enacted That the affairs of the said Association shall be controlled and managed by six directors, and that T. Pliny Fisher, Henry R. Lewis, Albert G. Towers, Fred R. Owens, Harvey L Cooper and William H. Deweese shall serve as such directors until the first Monday of January, in the year Nineteen hundred and three, and until their successors are duly elected.

Section 7. And be it enacted, That this Act shall take effect from the date of its passage.

Approved April 8th, 1902.

JOHN WALTER SMITH, Governor.

JOHN HUBNER, President of the Senate.

NOBLE L. MITCHELL, Speaker of the House of Delegates.

OFFICE OF THE CHIEF CLERK HOUSE OF DELEGATES.

I hereby certify That the aforegoing is a true copy of an Act of the General Assembly of Maryland passed at the January Session, 1902.

B. L. SMITH, Chief Clerk of the House of Delegates

FOR SALE. — 200,000 Cypress Shingles at Denton Bridge. They are going fast, send in your order at once. Z. T. HUTCHINSON, 4-17. Denton, Md.

Some Reasons

Why You Should Insist on Having

EUREKA HARNESS OIL

Unequaled by any other.
Renders hard leather soft.
Especially prepared.
Keeps out water.
A heavy bodied oil.

HARNESS

An excellent preservative.
Reduces cost of your harness.
Never burns the leather; its
Efficiency is increased.
Secures best service.
Stitches kept from breaking.

OIL

Is sold in all
Localities

Manufactured by Standard Oil Company.

POULTRY PARAGRAPHS.

Hens should be kept quiet and comfortable.

Do not have the mash sloppy; it should be crumbly.

If laying hens are confined they should have meat or milk.

Allow as much exercise as possible to all classes of poultry.

Unless a fowl is very valuable it does not pay to doctor it.

Sorghum and broom-corn seeds are excellent as a variety feed.

Give your house plenty of fresh air every day, winter and summer.

Milk may be profitably fed in any form—sweet, sour or buttermilk.

The poultry house should be whitewashed inside and out, roof and sides.

The time of hatching is of more importance than the breed, if you want winter eggs.

Young ducks should be sold as early as possible, and to that end should be pushed to get their growth. —Commercial Poultry.

Feeding Meat to Poultry.

When feeding meat to hens do not use that portion which is fat. The object in feeding meat to hens is to supply them with nitrogen and not fat, as the grain contains all the fat and starch required for them. If the fat is fed it does not assist in any manner to provide material for eggs, but rather retards than assists laying. The cheap portions of beef, such as the neck, are better for fowls than the choicest fat and lean steaks. Blood is excellent for fowls, and can be easily fed to them by mixing it with their soft food. The ordinary ground meat contains both fat and lean, and sells for about three cents a pound; but as the meat is subjected to heavy pressure at a high temperature most of the fat is removed. —Farm and Fireside.

ORDERS FAST AUTOMOBILE.

Charles M. Schwab Wants a Machine That Will Go Mile in Forty Seconds.

Charles M. Schwab, president of the United States Steel corporation, is evidently dissatisfied with his present mile a minute automobile, for he has ordered another machine from Germany, to be delivered in this country in July. A condition of the contract requires the makers to furnish Mr. Schwab with an automobile that can cover a mile in 40 seconds. If it fails to attain this speed the order is void. The carriage is to be fitted with an engine of 55 horse-power, and in general outline is to be a duplicate of the one that W. K. Vanderbilt, Jr., is now using in Paris.

The new automobile will be constructed to carry four persons. The carriage is to be made at the Daimler works in Cannstadt, Germany, and it is estimated that Mr. Schwab will be compelled to pay at least $12,000 for the vehicle, and probably $5,000 more duty.

EXPOSES NEW IMPOSTURE.

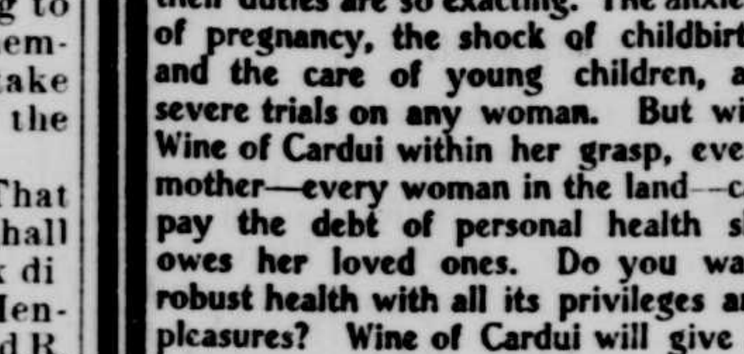

Librarian of Congress Discredits the Advertised Plan of a Private Book Agent.

Herbert Putnam, the librarian of congress, has issued the following note to the public:

"Washington.—I have received the following letter: 'An agent calling himself F. E. Stewart, of the library of congress, came to me the other day with a project for a traveling library—a branch of your library at Washington. For $2 a year one book a week would be sent free to any address, same book to be returned at the end of the week. Is this a legitimate arrangement?'

"During the past few years there have been various attempts upon the part of publishers and book agents to promote their enterprises by the allegation, direct or implied, that their publications emanate from the library of congress or are issued in some way under its authority. Here appears to be an imposture of a different sort. The library of congress is, of course, a free library. It is not a circulating library and there is no F. E. Stewart on its rolls, nor, so far as I am aware, any person of such a name employed in any way to represent it. Very truly yours,

"HERBERT PUTNAM,
"Librarian of Congress."

Healthy Mothers

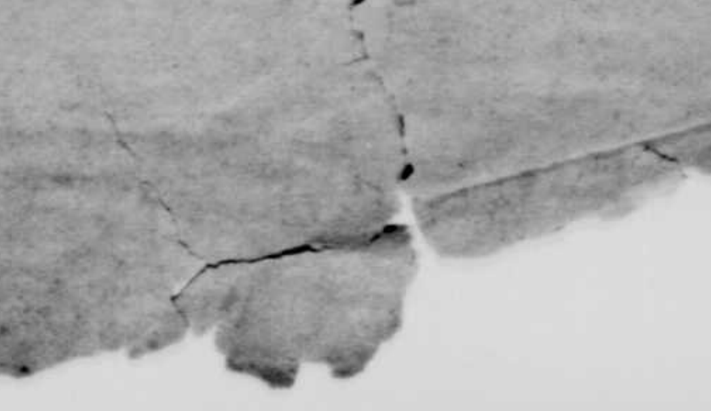

Few mothers are healthy, because their duties are so exacting. The anxiety of pregnancy, the shock of childbirth, and the care of young children, are severe trials on any woman. But with Wine of Cardui within her grasp, every mother—every woman in the land—can pay the debt of personal health she owes her loved ones. Do you want robust health with all its privileges and pleasures? Wine of Cardui will give it to you.

WINE of CARDUI

strengthens the female organs and invigorates weakened functions. For every female ill or weakness it is the best medicine made. Ask your druggist for $1.00 bottle Wine of Cardui, and take no substitute under any circumstances.

Mrs. Edwin Craes, Gormer, Mich.: "When I commenced using Wine of Cardui I was hardly able to walk across the house. Two weeks after I walked half a mile and picked strawberries. When my other child was born I suffered with labor pains 24 hours, and had to raise him on a bottle because I had no milk. After using the Wine during pregnancy this time, I gave birth last month to a baby girl, and was in labor only two hours, with but little pain, and I have plenty of milk. For this great improvement in my health I thank God and Wine of Cardui."

BETTER THAN A FAN

Prof. Moore Invents Machine for Cooling Hot Rooms.

Chief of the Weather Bureau at Washington Takes Out a Patent for a Novel But Effective Apparatus.

The possibility of keeping living rooms at a temperature of 70 to 72 degrees in the hottest weather, which means practically an end to summer suffering from heat, is held out by Prof. Willis L. Moore, chief of the weather bureau, who has filed application for a patent on what he calls a gravity air-cooling, dry and purifying machine. The new apparatus is the result of several years of study and experiment. Prof. Moore believes the invention to be of immense scientific and practical value. The cost of the machine will be so small that it will be within the reach of nearly all, so that the horrors of sweltering in stuffy rooms of the city during midsummer promises to be materially lessened. Prof. Moore said the other day:

"I believe that my machine solves the problem of a cheap, harmless and automatically working apparatus for cooling rooms. It is so simple that anyone can manipulate it; it can be removed from room to room; it is absolutely safe, and, above all, can be constructed so cheaply that it will be within the means of practically everyone to obtain. There will be no trouble in keeping a room at a temperature of between 70 and 72, no matter how hot it may be under normal conditions."

Have you a mortgage you want to sell? If so, write or call to see us. —Garey & Co-, Denton, Md.

PUBLIC LOCAL LAWS.

CHAPTER 157.

An Act to repeal and re enact with amendments Section 27 of Chapter 713 of the Acts of the General Assembly of Maryland, passed at the January session, 1900, entitled "An Act to repeal Sections 27 and 28 of Article Six of the Code of Public Local Laws, titled "Caroline County," Sub-titled "Birds and Game," and to re-enact the same with amendments.

Section 1. Be it enacted by the General Assembly of Maryland, That Section Twenty seven of Chapter Seven Hundred and Thirteen of the Acts of the General Assembly of Maryland, passed at the January session, 1900, entitled "An Act to repeal Sections 27 and 28 of Article 6 of the Code of Public Local Laws, titled 'Caroline County,' Sub-titled "Birds and Game," and to re-enact the same with amendments; be and the same is hereby repealed and re-enacted with amendments so as to read as follows:

Section 27. It shall not be lawful for any person in Caroline County to shoot, kill, catch or in any way entrap any woodcock, in said county between the Fifteenth day of January and the Fourth day of July in each and every year, nor any sora or water rail between the Fifteenth day of January and the Fifteenth day of September in each and every year; nor any wild duck between the First day of April and the Fifteenth day of September in each and every year; nor any squirrel between the Fifteenth day of January and the First day of September in each and every year; nor any patridges (or quail), rabbitt (or hare) between the Fifteenth day of January and the Fifteenth day of November in each and every year; nor any raccoon between the Thirty-first day of March and the Fifteenth day of September in each and every year; nor any muskrat or otter between the Fifteenth day of March and the First day of December in each and every year, and it shall be unlawful for any person, at any time, to dig into and destroy any muskrat home or den, provided, however, that nothing herein contained is intended to prevent any person at any time from digging out muskrats, minks or otters making dens in or tunneling into a mill dam or from killing at any time of the animals depredating upon their property.

Section 2. And be it enacted, That all Acts or part of Act inconsistent with the provision of this Act, whether the same be embodied in the Code of Public Local Laws or in the Code of Public General Laws, be and the same is hereby repealed so far as they relate to Caroline County.

Section 3. And be it enacted, That this Act shall take effect from the date of its passage.

Approved April 8th, 1902.

SEISMIC UPHEAVALS.

As a Rule They Precede the Eruption of Volcanoes.

Scientific Facts Bearing on the Recent Catastrophes in the Lesser Antilles—Theory of Crustal Weakness.

[Special Correspondence.]

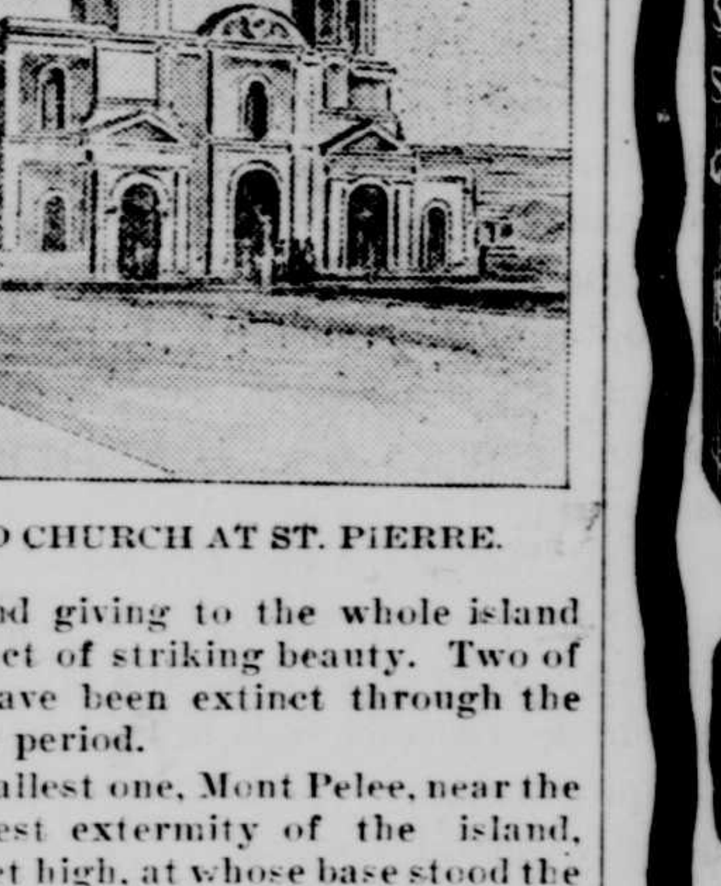

SCIENTIFIC men who have made volcanic and sismic disturbances a life study connect the recent disastrous outbursts and earthquake shocks in the Lesser Antilles with similar phenomena that caused such great destruction in Guatemala on the 18th of April of this year. The seismo-

NATIVES OF MARTINIQUE.

graph—a delicate instrument for recording the earth's tremors—recorded the effects of the Guatamalan earthquakes as far north as Baltimore, which renders it extremely probable that the rocks underlying the entire Caribbean sea were slightly disturbed. Whether this disturbance had the effect of precipitating the terrible outbreak in Martinique, St. Vincent and other places it is impossible to say with any degree of positiveness. If there was any such result it must have been communicated through the underlying rocks from one line of crustal weakness to another line, for the volcanic line of Central America and that of the Lesser Antilles, roughly parallel with each other, are 800 miles apart and supposed to be entirely distinct.

The group of small islands that have been brought into prominence by the St. Pierre and St. Vincent disasters form a curved line from Porto Rico southeast almost to the coast of Venezuela, and include the asphalt island of Trinidad, separating the Caribbean sea from the Atlantic. With the exception of Trinidad they are all considered to be of volcanic origin, mountainous, with intervening valleys of great fertility. Their history is filled with records of storms, earthquakes, fires and volcanic eruptions similar to the recent destruction of St. Pierre. They are all either English, French, Dutch or Danish dependencies. Of the islands affected by the late disturbances, that seem to have been more general than first reported, Guadeloupe is the largest. Its prinicipal town, Point-a-Pitre, was almost wiped out by an earthquake in 1843. Martinique, the next largest island of the group, is purely volcanic. With an area of only 385 square miles six volcanic peaks, none of them very high, rise into the air, conical in form, clad to their summits with luxuriant ver-

OLD CHURCH AT ST. PIERRE.

dure and giving to the whole island an aspect of striking beauty. Two of them have been extinct through the historic period.

The tallest one, Mont Pelee, near the northwest extermity of the island, 4,428 feet high, at whose base stood the prosperous port of St. Pierre, has been generally quiescent, although it has repeatedly given warnings of trouble to come. It was last in eruption during the month of August, 1851, when flames and volumes of black smoke and fine ashes burst suddenly from the crater and threw the people of St. Pierre into a panic. They fled from the place, many taking refuge on the ships in the roadstead. The eruption was not serious, however, only covering some hundreds of acres with sulphurous debris, but it was enough to show that the crater was not dead, but sleeping. In 1767 about 1,600 people were killed by an earthquake in Martinique. In 1839 the then capital, Fort Royal, now Fort de France, was visited by an earthquake which destroyed half the town, caused great damage and killed about 700 persons. The people of St. Pierre considered Mont Pelee harmless, in spite of the rumblings, because the crater had been turned into a lake by the rains of the past 50 years, and considered the presence of water proof positive that the fires had been drowned out, never to be lighted again.

Santa Lucia, south of Martinique,

"I can't understand about this wireless telegraphy," said Mrs. Wunder.

"Why, it's plain as day," said Mr. Wunder. "They just send the messages through the air, instead of over wires."

"I know that," said she, "but how do they fasten the air to the poles?" —Baltimore American.

The Diplomatic Grocer.

"I don't see why you continue to deal with Sands?" said Mr. Hauskeep, "he's the most dishonest grocer in the neighborhood."

"How can you say such a thing?" exclaimed Mrs. Hauskeep, who is growing distressingly stout. "He weighed me on his scales the other day and I only weigh 151. I think he's real gentlemanly."—Philadelphia Press.

Lenten Sacrifice.

The dear girl sought some way of keeping Lent,
And chose her special sacrifice with care;
She thought and thought, and then in good intent
Gave up the chappie whom she couldn't bear.

SADLER'S BRYANT & STRATTON BUSINESS COLLEGE,

2 to 12 North Charles St., Entrance No. 12, Baltimore, Md.

Schley and Santiago

BY GEORGE EDWARD GRAHAM.

The intrepid Associated Press war correspondent, who was aboard the U. S. S. Brooklyn during the entire five months of the campaign. Illustrated with photographs taken by the Author during the fight.

The Most Sensational Book of the Day.

The true story of the famous cruise of the Flying Squadron under Commodore Winfield Scott Schley, including the blockade and destruction of the Spanish fleet, TOLD FOR THE FIRST TIME.

Contains an autograph endorsement and personal account of the battle by Rear-Admiral Schley.

"The facts of the story of the movements and operations of the Flying Squadron as the author tells them in this book are correct." —W. S. SCHLEY.

An interesting narrative of facts. Explains the so-called "Retrograde Movement;" the "Loop;" the "Coaling Problem," and settles conclusively every adverse ruling of the Court of Inquiry.

PRESIDENT ROOSEVELT, when Governor of New York, said:—"Mr. Graham's story is the best account I have heard or read of the naval fighting during the war. It needed just as much courage to go about taking photographs as it did to work the guns."

THE NEW YORK HERALD says:—"Mr. Graham, in the telling of facts, leaves the reader free to make the deduction that several naval officers need a Court of Inquiry to re-establish their reputations, if they can be re-established."

No subject has ever been before the public that has interested everybody as the manner in which Admiral Schley has been treated, and the American people demand the *full recognition of the Hero of Santiago.* This book tells everything just as it occurred and as the eyewitnesses saw it. Book is selling like wildfire. Liberal commissions. Outfit and books now ready. Send seven 2-cent stamps for canvassing outfit. ACT QUICK. Now is the time to MAKE MONEY.

Price $1 50, $1.75, $2.25, $2.75, according to style of binding desired.

Kodol Dyspepsia Cure

Digests what you eat.

This preparation contains all of the digestants and digests all kinds of food. It gives instant relief and never fails to cure. It allows you to eat all the food you want. The most sensitive stomachs can take it. By its use many thousands of dyspeptics have been cured after everything else failed. It prevents formation of gas on the stomach, relieving all distress after eating. Dieting unnecessary. Pleasant to take.

It can't help but do you good

Prepared only by E. C. DeWitt & Co., Chicago. The $1. bottle contains 2½ times the 50c. size.

Sold by Hugh Duffy, Hillsboro, Md.

Remember the place, the Gold Medal Bakery & Fancy Grocery, Field & Willis.
