SMIC UPHEAVALS.

Rule They Precede the Eruption of Volcanoes

tific Facts Bearing on the Recent Catastrophes in the Lesser Antilles—Theory of Crustal Weakness.

[Special Correspondence.]

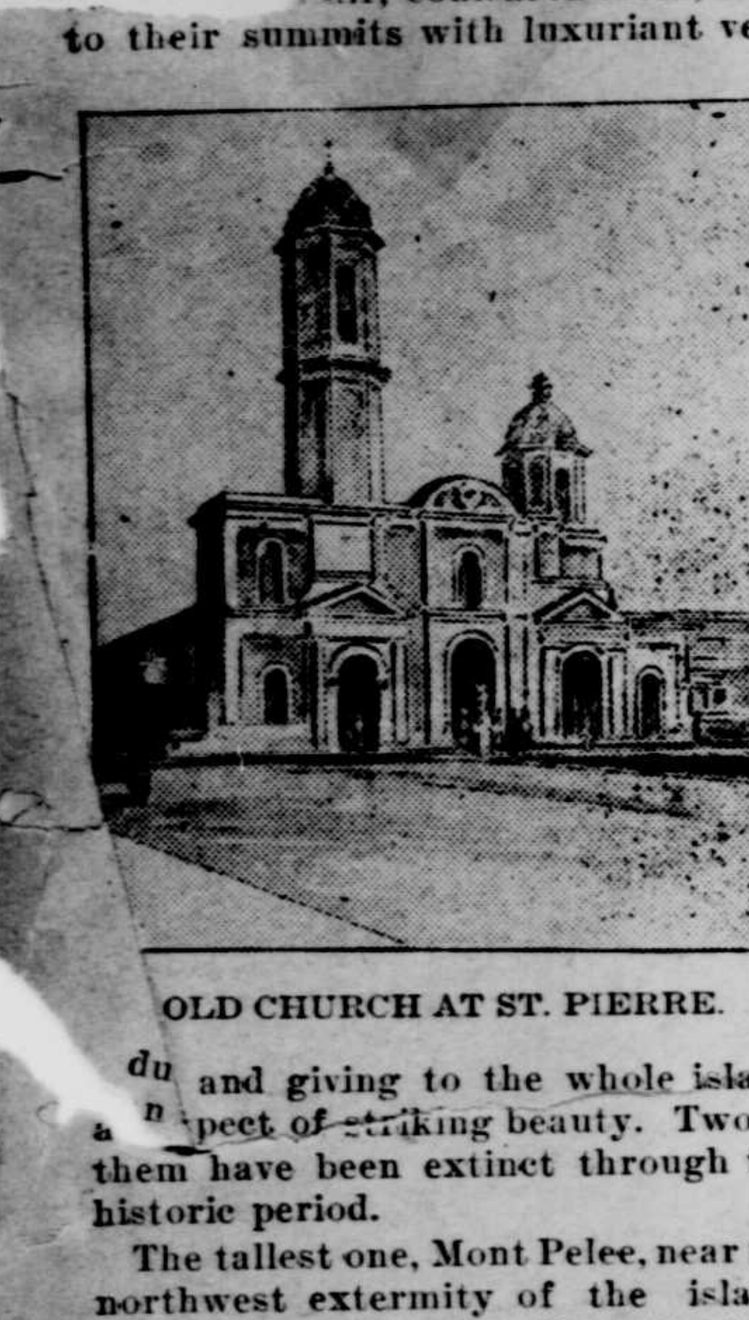

SCIENTIFIC men who have made volcanic and sismic disturbances a life study connect the recent disastrous outbursts and earthquake shocks in the Lesser Antilles with similar phenomena that caused such great destruction in Guatemala on the 18th of April of this year. The seismo-

NATIVES OF MARTINIQUE.

graph—a delicate instrument for recording the earth's tremors—recorded the effects of the Guatamalan earthquakes as far north as Baltimore, which renders it extremely probable that the rocks underlying the entire Caribbean sea were slightly disturbed. Whether this disturbance had the effect of precipitating the terrible outbreak in Martinique, St. Vincent and other places it is impossible to say with any degree of positiveness. If there was any such result it must have been communicated through the underlying rocks from one line of crustal weakness to another line, for the volcanic line of Central America and that of the Lesser Antilles, roughly parallel with each other, are 800 miles apart and supposed to be entirely distinct.

The group of small islands that have been brought into prominence by the St. Pierre and St. Vincent disasters form a curved line from Porto Rico southeast almost to the coast of Venezuela, and include the asphalt island of Trinidad, separating the Caribbean sea from the Atlantic. With the exception of Trinidad they are all considered to be of volcanic origin, mountainous, with intervening valleys of great fertility. Their history is filled with records of storms, earthquakes, fires and volcanic eruptions similar to the recent destruction of St. Pierre. They are all either English, French, Dutch or Danish dependencies. Of the islands affected by the late disturbances, that seem to have been more genera[illegible] than first reported, Guade[illegible] the largest. Its prinicipal [illegible]nt-a-Pitre, was almost wiped [illegible] earthquake in 1843. Mar[illegible] next largest island of the [illegible] purely volcanic. With an [illegible] 385 square miles six vol[illegible] none of them very high, [illegible] air, conical in form, clad to their summits with luxuriant ver-

OLD CHURCH AT ST. PIERRE.

du[illegible] and giving to the whole island a[illegible]spect of striking beauty. Two of them have been extinct through the historic period.

The tallest one, Mont Pelee, near the northwest extermity of the island, 4,428 feet high, at whose base stood the prosperous port of St. Pierre, has been generally quiescent, although it has repeatedly given warnings of trouble to come. It was last in eruption during the month of August, 1851, when flames and volumes of black smoke and fine ashes burst suddenly from the crater and threw the people of St. Pierre into a panic. They fled from the place, many taking refuge on the ships in the roadstead. The eruption was not serious, however, only covering some hundreds of acres with sulphurous debris, but it was enough to show that the crater was not dead, but sleeping. In 1767 about 1,600 people were killed by an earthquake in Martinique. In 1839 the then capital, Fort Royal, now Fort de France, was visited by an earthquake which destroyed half the town, caused great damage and killed about 700 persons. The people of St. Pierre considered Mont Pelee harmless, in spite of the rumblings, because the crater had been turned [illegible]nto a lake by the rains of the past [illegible] years, and considered the presence [illegible] water proof positive that the fires [illegible]ad been drowned out, never to be [illegible]ighted again.

Santa Lucia, south of Martinique, which has also suffered during the recent catastrophe, and Dominica, north of Martinique, are British possessions. The soil of both is covered with volcanic refuse of four eruptions. St. Vincent, the southernmost of the group affected by the late calamity, and next to Martinique the chief sufferer, also belongs to Great Britain. It is the seat of one of the largest volcanoes in the West Indies, the famous Soufriere, 3,000 feet high, with a crater three miles in circumference and 500 feet deep. Its activity at the present time caused the loss of nearly 2,000 lives and for a few days threatened the existence of Kingstown, the capital of the island, although located quite a distance from its base. Soufriere's eruption in April, 1812, was one of the most impressive demonstrations of its kind recorded by science. The crater showed signs of disturbance early in April. Charles Shephard, the historian of St. Vincent, continues that on April 27 from a fissure in the cone it exuded a thin, white smoke. The first indication of the coming catastrophe was a severe concussion of the earth, a tremendous noise in the air, and the bursting of a vast volume of black smoke. Like a heavy storm of rain, sand darkened the air. Vegetation was destroyed and the smoke and ashes continued for three days, while the sun suffered an almost total eclipse. At noon on the last day of the month the first great change was noted. The ground rocked and the noise was incessant. At nightfall a great pyramid of flame shot from the cone. Like rockets electric flashes shot in all directions. The pyrotechnic display was followed by the gushing forth of lava. During this time the crater was belching forth large globular bodies of fire, which exploded in the air with great noise. Then an earthquake shook the earth. For two hours cinders fell like hail and fire and heated stones shot skyward and fell. Houses were set on fire, and many persons were killed by the falling fire. Steadily until noon of May 1 the crater sent out its rivers of lava and its showers of red hot stones. but on the afternoon of that day it gradually subsided. So tremendous had been the upheaval that the conical mountain had disappeared; a new crater was formed to

STEPLADDER STREET, ST. PIERRE.

the north of the original one, and the face of the mountain was changed.

Science has ascertained that volcanoes are distributed over the face of the globe in lines. They mark lines of weakness in the crust of the earth; for along these lines the earth's crust has not been strong enough to withstand the enormous subterranean pressure. It is believed that this pressure is caused largely by water which, sinking to the heated regions, is converted into steam, and steam is now commonly regarded as the main motive force of volcanoes; hence the rise of volcanoes along these lines of weakness, and also earthquakes. Both naturally occur most frequently along lines of weakness where the rocks may be most easily disturbed.

The long chain of the islands of the Lesser Antilles lies along such a line of weakness. Their rocks are porphyries and lavas, igneous material thrown up from the bowels of the earth through a submarine break in the crust that extends in the form of a bow, roughly north and south, for a distance of 700 miles. The islands rise like the ruined piers of a bridge, the outer rampart of the Caribbean sea surmounted by volcanic cones. The eastern or Atlantic part of the chain, extending from Sombrero on the north to Barbados on the south, are not of plutonic but of oceanic origin, and all the islands in this latter group rest upon a foundation of firm rock.

WILLIAM WALTER WELLS.

Vast Forests in Russia.

"Wooden Russia" is the name familiarly applied to the vast forest area of Russia, in Europe, which cover 464,548,600 acres, or 36 per cent. of the entire area of the country. Yet some fear is felt that the country may be deforested through the carelessness of private owners, and the government is considering steps for the protection of the forests. In Russia houses built of any other material than wood are almost unknown outside the cities, and wood constitutes the principal fuel.

Big Rat Saved by Swan.

Some years ago, during a great flood, a number of persons were standing upon the bank of a river in England, watching the waters sweep by. Their attention was soon caught by a swan crossing the stream. The bird bore on its back a curious black object. As the swan drew near its burden was seen to be a rat. It was supposed that the flood had borne it into the water, and that it had jumped for safety upon the bird's back. As soon as the bird reached the shore the rat ran away.

Consumption Leads All Others.

Within the last ten years more new methods have been devised for dealing with consumption than with any other human ailment.

Another Version.

To believers in old axioms,
Let it now be understood,
It isn't that the good die young,
But that the young die good.
—Chicago Daily News.

JUST AS SHE LIKES.

"Yo' Ephie! D'yo' want me to hafter holler mahsef black in de face 'fo' yo' answers?"—Chicago American.

Drawing the Line.

Now as to the name of the garment,
There is one unerring test.
If it costs five plunks 'tis a waistcoat;
If less than that, a vest.
—Chicago Tribune.

MRS. ASTOR LAVISH HOSTESS.

Many Noted People Attend Her Magnificent Dinners at the French Capital.

Mrs. Astor has never entertained so continuously any previous season at Paris as this year. Dinners, receptions, ladies' luncheons, theater parties, followed by suppers, have been given without ceasing. Mrs. Astor, if possible, grows in social authority every Paris season. Even the best French families now consider it a great honor to be counted among Mrs. Astor's familiars.

Until now, Mrs. Harry Lehr has assisted her in entertaining, though even Mrs. Astor finds it hard to have [illegible] champagne [illegible]on accepted by the Faubourg St. Germaine aristocrats, who ever held Countess Castellane aloof, on account of a similar mercantile offense.

The last Astor dinner was in honor of Prince and Princess Radolin, the German ambassador. The list of guests will give an idea of Mrs. Astor's prominence. Among them are Duchess de Dohan, Marquis and Marquise de Beauvoir, Prince and Princess Dominique Radziwill, Duc De Gramont, Prince Borghese, Marquis De Gouy D'Arcy, Baron and Baroness Seilliere, and Marquis and Marquise De La Steyrie.

A Foregone Conclusion.

The Sage—Did I see you talking to Capt. Hawk just now?

The Innocent (with enthusiasm)—Yes; and isn't he a splendid fellow? He's the man for my money.

The Sage—Ah! and he'll have it, too, before he's done with you.—Ally Sloper.

A Great Reader.

"I suppose you read a good deal," said the young woman.

"Yes, indeed," answered the young member of congress. "I make it a point to read everyone of my own speeches as soon as they come from the typewriter."—Washington Star.

No Fun in It.

"Though 'brevity's the soul of wit,'"
Remarked the busted sport,
"I really cannot see a bit
Of fun in being short."
—Philadelphia Press.

EXCUSED.

Old Gentleman—Well, have you been a good girl and been to school?

Child (jubilantly)—Na-a-w; I've got the smallpox!—The Tatler.

Not Afraid of Newspaper Attacks.

London papers are severely criticising J. Pierpont Morgan for gobbling up England's maritime supremacy, says the Chicago Record-Herald. If the London editors think they can stop Pierp. that way they are in for a painful surprise.

Suggested Side Trip for Carnegie.

While in Europe, suggests the Chicago Inter Ocean, Andrew Carnegie may possibly amuse himself by visiting the Scotch kirks for the purpose of seeing for himself whether the pipe organs that he gave them are developing any leaks.

Locating Smut in Fields.

Prof. R. A. Moore says: In making the tests a barrel hoop should be used and the test made after the oats are fully headed and on the verge of turning yellow. On approaching the field, throw the hoop in such a manner that it will encircle grain in a place not previously selected by the operator. All stalks encircled by the hoop should be counted, then the stalks having smutted heads counted and that number divided by the whole number within the hoops, e. g., if 125 stalks are found encircled and of this number 25 are found to be affected, 25 divided by 125 gives the number, .20, representing 20 per cent. Several tests should be made in each field and the percentages averaged.

Do you wish to borrow money? We have it. Write or come to see us —Garey & Co., Denton, Md.

I have had occasion to use your Black-Draught Stock and Poultry Medicine and am pleased to say that I never used anything for stock that gave half as good satisfaction. I heartily recommend it to all owners of stock.
J. B. BELSHER, St. Louis, Mo.

Sick stock or poultry should not eat cheap stock food any more than sick persons should expect to be cured by food. When your stock and poultry are sick give them medicine. Don't stuff them with worthless stock foods. Unload the bowels and stir up the torpid liver and the animal will be cured, if it be possible to cure it. Black-Draught Stock and Poultry Medicine unloads the bowels and stirs up the torpid liver. It cures every malady of stock if taken in time. Secure a 25-cent can of Black-Draught Stock and Poultry Medicine and it will pay for itself ten times over. Horses work better. Cows give more milk. Hogs gain flesh. And hens lay more eggs. It solves the problem of making as much blood, flesh and energy as possible out of the smallest amount of food consumed. Buy a can from your dealer.

MRS. LODGE'S HAT.

How the President's Wife Came to Wear It When Sitting for Portrait.

It is not often that a woman in this day and time can boast an immortal piece of headgear, and it is probable Mrs. Lodge, wife of the United States senator, is the only woman in this country who has this distinction. Mrs. Lodge's hat figures as a prominent feature of the Chartran portrait of Mrs. Roosevelt now in Paris and which will later hang upon the walls of the white house.

It happened in the most natural manner imaginable. Mrs. Lodge accompanied Mrs. Roosevelt for her first sitting for the portrait and at the time Mrs. Roosevelt wore a black hat and her long, black visiting coat, the latter to cover the white silk dress in which she had decided to sit for the portrait. The artist liked the outer garment and hat effect so much he prevailed upon Mrs. Roosevelt to give her sittings in hat and coat, using the white house grounds and the executive mansion as a background.

The hat worn by Mrs. Roosevelt was a trifle small and the artist casually commented on the fact. Mrs. Lodge wore a large black picture hat and the exchange was quickly made. Looking from the portrait to the hat of Mrs. Lodge at the tea given by the French ambassador when the portrait was first shown the public, some of their friends discovered the exchange of hats, and laughingly commented on the hat becoming a feature of the future history of the white house.

VICTIMIZED GENEROUS JEWS.

Austrian Boy, Who Raised Money to Save Parents from Jail, Was Fraud.

The Jews who contributed the funds raised to send the boy, Solomon Schnurr, back to Austria, where it was said his family was in jail on a charge of murdering him, are beginning to think that they have been victimized. The story about the murder charge appeared in some of the Jewish papers in the form of a letter said to have been received from some of the imprisoned relatives, asking that the boy be sent back, as that was the only proof of the family's innocence that the Austrian government would accept. Sympathetic Jews at once began an agitation to send the boy to Austria. A mass meeting was held in an East side synagogue, at which $300 was raised to pay the boy's expenses. This was further increased by subscriptions gathered in the stores and even in the tenements. The boy, it was said, sailed three weeks ago.

A letter has been received from I. S. Fuchs, editor of the Austrian paper, saying that the whole tale was a piece of the grossest deception from beginning to end.

TO STUDY AMERICAN SYSTEM.

M. E. Sadler, British Educator, Comes to This Country for Ideas.

M. E. Sadler, director of inquiries and reports for the Board of education for England and Wales, has arrived in this country. Mr. Sadler is deeply interested in the plan of Alfred Mosley, the English capitalist, to send a commission to various countries to study and report on educational affairs. The commission will first go to Germany, Mr. Sadler says, and then come to this country, arriving here probably late in October. Each member of the commission will write his personal views and all will be published.

"The example set by your American moneyed men has had an immense influence in England," said Mr. Sadler, "and has led some of our leading capitalists to take an interest in educational matters and to devote some of their money to making English schools and educational institutions more effective. I consider the commission proposed by Mr. Mosley one of the most interesting moves in this direction that has yet been undertaken."

WOULD WED MISS ASTOR.

Lord Deresby, Son of Countess of Ancaster, Is a Tenative Suitor.

Miss Astor, the daughter of William Waldorf Astor, is being chaperoned again this season by the countess of Selkirk, who also has charge of Princess Sophia, daughter of Dhuleep Singh, the descendant of the grand mogul, from whose grandfather Great Britain took the Kohinoor, as well as a vast fortune. In return the government is now allowing the princess $25,000 a year.

Miss Astor is only occasionally seen with the countess of Selkirk, as she goes about chiefly with the countess of Ancaster, who has a marriageable son, Lord Willoughby Deresby, for whom the Ancasters would like to capture a multi-millionairess. Miss Astor, however, has inherited a good deal of her father's self-centered disposition, and will make her own choice of a husband.

May Not Keep It Loaded.

There is comfort in the thought, says the Chicago Inter Ocean, that for obvious reasons Hetty Green may not keep loaded the pistol that she is permitted to carry.

Well Named.

The Lesser Antilles, says the Chicago Tribune, may be considerably less after the disturbance is all over.

Horses Not Out of Date.

The horse has not yet gone out of date, notwithstanding the prophecies of a "horseless age." Cable and electric cars, bicycle and automobiles, portable engines and steam plows, are not yet able to eliminate him from the affairs of men. Great Britain, in connection with the Boer war, paid one of the largest bills for horse supplies, it is said, ever paid in the history of the world. The United States has lately carried on with foreign nations an unprecedented trade in mules and horses, the total export of the government for the first eight months of the current fiscal year amounting to more than $9,000,000,000.—Agricultural Epitomist.

A Good Salesman.

The man who succeeded in selling that pistol to Mrs. Hetty Green, says the Chicago Inter Ocean, was no slouch of a financier, either.

African Cocoa.

Africa promises to rival South America and the West Indies as a producer of cocoa.

SADLER'S BRYANT & STRATTON BUSINESS COLLEGE,
2 to 12 North Charles St., Entrance No. 12, Baltimore, Md.

Schley and Santiago
BY GEORGE EDWARD GRAHAM.

The intrepid Associated Press war correspondent, who was aboard the U. S. S. Brooklyn during the entire five months of the campaign. Illustrated with photographs taken by the Author during the fight.

The Most Sensational Book of the Day.

The true story of the famous cruise of the Flying Squadron under Commodore Winfield Scott Schley, including the blockade and destruction of the Spanish fleet, TOLD FOR THE FIRST TIME.

Contains an autograph endorsement and personal account of the battle by Rear-Admiral Schley.

"The facts of the story of the movements and operations of the Flying Squadron as the author tells them in this book are correct." —W. S. SCHLEY.

An interesting narrative of facts. Explains the so-called "Retrograde Movement," the "Loop," the "Coaling Problem," and settles conclusively every adverse ruling of the Court of Inquiry.

PRESIDENT ROOSEVELT, when Governor of New York, said:—"Mr. Graham's story is the best account I have heard or read of the naval fighting during the war. It needed just as much courage to go about taking photographs as it did to work the guns."

THE NEW YORK HERALD says:—"Mr. Graham, in the telling of facts, leaves the reader free to make the deduction that several naval officers need a Court of Inquiry to re-establish their reputations, if they can be re-established."

No subject has ever been before the public that has interested everybody as the manner in which Admiral Schley has been treated, and the American people demand the *full recognition of the Hero of Santiago*. This book tells everything just as it occurred and as the eyewitnesses saw it. Book is selling like wildfire. Liberal commissions. Outfit and books now ready. Send seven 2-cent stamps for canvassing outfit. ACT QUICK. Now is the time to MAKE MONEY.

Price $1 50, $1.75, $2.25, $2.75, according to style of binding desired.
