Buckeye :: Incubators

HOT WATER SYSTEM

The Buckeye is GUARANTEED to hatch MORE CHICKS and STRONGER CHICKS than any other incubator.

We have the following 3 sizes in stock and can get the larger sizes in three days.

No. 14, capacity 65 eggs, $18.50
No. 16, capacity 110 eggs, 31.25
No. 17, capacity 210 eggs, 42.00

Less 10 Per Cent.

Standard Colony Brooders

COAL BURNING

Makes 3 chicks grow where 1 grew before Self feeding, self regulating, simple, safe, everlasting. We have a stock of these in 2 sizes.

No. 18, capacity 500 chicks, $25.50
No. 19, capacity 1000 chicks, 31.50

Less 10 Per Cent.

We have a full line of repairs for Buckeye Incubators and Colony Brooders.

Luck and Lack

Don't trust to luck. Luck is untrustworthy. Systematic, scientific striving for any goal is far more likely to bring you success than any mere faith in your success.

Just as changing a single letter changes "Luck" to "Lack," so will the reverses of a single day change plenty to want. But you can insure yourself against this by building your success on the habit of saving.

Messages to Seekers of Success

Save and Win

Be well dressed. Make friends. Increase your influence in your community. Enjoy the respect of all your associates.

These things do not come to those who trust to luck for them. Systematic saving will win them for you. Systematic saving will accumulate for you a small fortune that can safely and readily be expanded to a large one.

PROPER TIME TO PREPARE GARDEN

A Few Well-Cared-For Hotbed Sashes Are Good Money Makers on Any Farm.

COVER CROP IMPROVES SOIL

All Rubbish, Dead Vines or Plants, Stakes and Poles Should Be Cleared Away and Ground Planted to a Green Crop.

Whether it is conducted on an extensive scale to supply the market or whether it is to produce food for the family the garden plot is likely to be the most profitable acreage on the farm. Gardening really starts in the fall. When the last vegetables have been removed and stored the prudent gardener sets about to prepare the ground for the next year's crop.

Clearing Away Refuse.

Any rubbish, dead vines or plants, and bean poles or tomato stakes should be cleared away, says the United States Department of Agriculture, and the ground sown to rye or some other green crop to prevent the loose earth from washing under the winter rains. A cover crop also improves the physical condition of the soil. When a cover crop cannot be supplied the next best thing that may be done is to plow or spade the soil and allow it to lie rough throughout the winter. This practice destroys many insects that lie just below the surface. The

Hotbeds Furnish Early Vegetables at a Time When They Command Highest Market Prices.

winter frosts have a lightening effect upon the soil, especially on clay soils.

The earliest and choicest vegetables are harvested by the man who maintains a few hotbed sashes and uses them to start his garden. He is able to handicap the frost line by several weeks, and to set strong, well-developed plants in his garden at a time when his neighbors are planting seed.

The farm income is at its lowest point in the early spring, but it can be increased considerably by the sale of young plants grown in hotbeds and ready for transplanting. Tomato, cabbage, eggplant and pepper plants are always snapped up when the first warm planting days come, and they are easily grown in the hotbed. A little more space and a little more seed than the grower needs for his own use are likely to bring good profits. Before the ground freezes in the fall is a good time to clean out the old hotbeds.

Unless the soil used in the hotbed is to be exchanged for fresh earth it should be shoveled from the bed and tossed into a pile nearby. The decayed manure from the bottom is scattered over the pile and thoroughly mixed with it to form rich soil for next year's beds. Over this goes a coat of straw or leaves held down by bits of board to keep it from blowing.

Some farmers find it convenient to use evergreen boughs instead of straw for the outer covering.

Preparation of Hotbed.

New hotbed pits should be dug so that they will face the south, and the location should be selected so that the beds will be protected from the cold north winds and late spring storms. Sometimes the earth taken from the new pit is suitable for use in the hotbed, but this is the exception rather than the rule. A few loads of leaf mold from the woods mixed with the natural soil will often form a smooth, rich stoneless mass which gives an ideal hotbed filler.

The back or north side of the frame is usually from 12 to 18 inches high, while the south end is about eight inches, so that the whole bed may have pitch enough to get the sun upon all parts. The standard hotbed sash is handled by most dealers, and measures three feet in width and six feet in length. A frame just wide enough to support the sash seems to be the most satisfactory, though wider beds are sometimes used with supporting ridges placed at six-foot intervals. A well-painted cypress sash, glazed with a good double-strength glass well set in putty should give the careful gardener 12 to 15 years' service.

Heat for the hotbed is furnished by means of a bed of horse manure 8 to 16 inches thick in the bottom of the pit. Permanent hotbeds are often heated with coils of steam or hot-water pipes under the bed.

Hotbeds require constant care to prevent their becoming overheated, especially during bright weather.

New Glove-Cleaning Device.

A Massachusetts inventor has devised a glove-cleaning machine which is somewhat like an ice cream freezer. The soiled gloves are dropped into gasoline or other cleaning fluid and whirled around by a perforated blade through which the liquid is forced. After the handle has been turned about three minutes the gloves may be taken out spotless.

ADVANTAGE NOW WITH WOMEN

Modern Feminine Garments Such That They No Longer Need "Take All Day to Dress."

No longer does it "take her all day to dress."

Quietly and steadily woman has got rid of many checks upon rapidity of dressing; has consolidated garments, abolished buttons, done away with hooks and eyes, abandoned very often even corsets and the "fixing" of her hair, while man is quite as slow a dresser now as when Uncle C. Depew repeated his first story.

Not, of course, if woman garbs herself for purposes strictly social. This means one-tenth dressing and nine-tenths preparation of an armament that no stupid League of Nations would ever hope to curb. Very different is the morning method of feminine executives, of girls intent on business, study or art, of stump-speaking ladies when in transit.

Brother dazed himself with speed when first he fastened trousers with a belt, though buttons still remain for the "weskit" and the coat and that weary round of pearl and gold buttons for the shirt. But sister takes her one-piece suit at a single hurdle and snaps a single "snapper" at the waist.

Long ago man hopped into his congress gaiters. Now he ties his oxfords. His wife, however, steps into her pumps.

"Making her hair" once impeded mother's toilet. Fathers having hair to part must part it still. But daughter, being "bobbed," gives her hair one shake to "do" it.

"Nowadays," says an expert, "a girl can easily dress in ten minutes. Then she adds 20 for making up her face."

SALMON HAD TRAVELED FAR

Fish "Tagged" at Point Partridge, Washington, in 1918, Taken in Waters 600 Miles Distant.

The Canadian department of marine and fisheries has notified the bureau of fisheries of the United States Department of Commerce of the capture in the Skeena river, British Columbia, in the spring of 1920, of a chinook salmon bearing an aluminum button or tag with the letters "B. F." stamped on one side and the number "1911" on the other. An examination of the bureau's records shows that the tag in question, one of a special series employed in connection with an investigation of the rate and route of migration of the sockeye salmon in the Fraser river-Puget sound region, was attached to a fish at Point Partridge, Whitbey island, Wash., on August 13, 1918. It is now evident that the fish was a chinook salmon tagged by mistake.

The fact that a chinook salmon should be caught in a shore trap far from the sea two years after the fish attained the spawning condition is interesting and suggestive, and the wanderings of this fish before and after tagging would be a fascinating theme for speculation. The distance between the two points at which it came under observation is about 600 miles by the most direct water route.

At Four-Forty.

Theater orchestras throughout the country have fixed on a tone standard for general use in all theaters. The A is toned to 440 vibrations a second. Louis Ruth, manager of B. F. Keith's orchestra, called up a local piano tuner and asked him to go to Keith's to tune the piano.

"I wish you would give it immediate attention," Ruth told the piano man. "Tune it at four-forty."

A day passed and the piano in the Keith pit remained untuned. Ruth called up the man who took the job.

"You haven't touched our piano," Ruth said a bit indignantly.

"Well, I was over there at 20 minutes to five yesterday afternoon and couldn't get in," was the excuse.

And then Ruth explained what he meant by four-forty.—Indianapolis News.

Increase in World's Crops.

A bulletin issued by the international institute of agriculture announces that the aggregate wheat and rye crops of the northern hemisphere total 62,400,000 metric tons, as against 61,700,000 metric tons in 1919. The production of barley, according to the bulletin was 8 per cent larger than last year, while oats increased 21 per cent. The maize crop of southern Europe was good, and that in America 10 per cent more than last year. The probable yield of beet sugar is considered favorable by the institute. The export of 400,000 tons of wheat from British India is advocated by the institute.

Make Your Mind Your Klondike.

Every man has a rich mine of precious ores if he wants to work it. The other day the news went out that great oil fields had been discovered in Klondike, the land famous for gold. The papers say men are rushing to stake claims as they did in the palmy days of the gold craze, and there will be many who will part with all they have and make their way to what promises to be a quick fortune. In the last rush the way to Dawson City had many a ghastly group of bleaching bones when the snows of winter melted away. The chances are this present craze will duplicate the scene. Only a few of the many make money. It will ever be thus as long as men try to win by chance the riches that usually come by toil.—Grit.

"'A fellowship dinner? What's that?' said Myrtle.

"'Why,' said Mabel, 'you pay for mine, and I pay for yours.'"

Not Apprehensive.

"Aren't you afraid America will become isolated?"

"Not if us farmers keep raisin' things the world needs," answered Farmer Corntossel. "The feller that rings the dinner bell never runs much risk of bein' lonesome."

Saturday, January 29, "The Love Flower"

The latest and greatest of D. W. Griffiths famous productions, now being presented at the New Theatre in Baltimore city.

The master screen craftsman, David Wark Griffith, creator of the screen's greatest sensations, has presented an admiring public with another wonderful production, "The Love Flower." It is an unusually dramatic story of the wonderful love of a daughter for her heart-broken father, who being hounded to the very ends of the earth, dares to plan the undoing of the man who is desirous to bring ultimaet disgrace upon the very light of her heart and soul and grief to her every thought.

Not one woman in ten thousand would have dared to do what this daughter unhesitatingly did to save her father. Not one person of her sex in many times that number would have clung to the heart strings of her parent through their many trials and tribulations, with every atom of strength in her frail body, as did this girl of nature, this child of all that was good and true and wholesome.

The development of this theme by Mr. Griffith has been handled in a most masterly manner. His players, headed by Richard Barthelmess and Carroll Dempster, are par excellence in this play.

A Charming Comedy will be the Night Cap for this Great Film.

Admission, Special For This Picture, 50 Cents, Including War Tax.

Tuesday, February 1, "Fair and Warmer"

Featuring May Allison in Avery Hopwood's Most Hilarious Farce Comedy.

The Story the Return Mail Tells

AFTER all it is not the *quantity* of printed matter which is mailed, neither is it necessarily the expense of the job, nor the elaborate manner in which it is printed—IT IS RETURNS ALONE THAT COUNT.

¶ The *return* mail tells the story of the success or failure of a piece of printed advertising.

¶ There is but one way to make the results of the return mail a certainty—and that is by CO-OPERATION between the Printer and his client.

¶ A frank discussion of your problem—the application of our experience, and we are positive that your message will receive the attention that it merits from those to whom it is addressed.

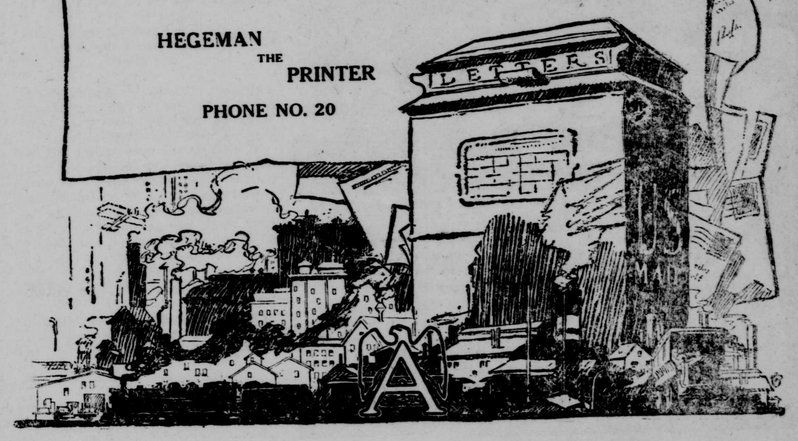

The head of a large business concern in New York was told a few weeks ago that in his office a 50c all-rag bond was being used for memorandum forms and a "cheap" 16c sulphite or wood-pulp bond for letterheads sent to clients. In many business houses there is probably a waste of this sort.

¶ Economy in printing may mean the expenditure of more or less money according to the results desired, but economy is *best* practiced in the matter of mechanical treatment in accordance with your Printer's suggestions.

Call on us and let us help you to arrange your supplies of printed stationery, Etc.
