IT PAYS TO ADVERTISE

You'll Laugh Till Your Sides Hurt When You See This

For 150 good laughs and a jovial feeling the rest of the week see the play this year, which is one, we know from experience as well as reputation will meet your highest expectations. "It Pays to Advertise" is presented by the Chautauqua Players, under the direction of Elizabeth B. Oliver, whom you will remember from "The Hunter" and "Rebecca of Sunnybrook Farm."

A feature of another circuit last summer and the hit of two of our winter circuits, this play bubbles with laughs and exudes good humor from every line. It is a laugh on modern advertising, but it is the best ad the advertising man could have.

Why do you eat hens' eggs?

The central character is soaked in the gospel of advertising. He claims that the reason we eat hens' eggs in stead of ducks' eggs is because the hen advertises her product. Ever think of it just that way?

Come and see the play on the fifth evening.

COWPEA GROWTH IMPROVES SOIL FOR CROPS OF FUTURE

The ease with which cowpeas are grown and their marked effect on succeeding crops have made them one of the most popular crops grown for soil omprovement. Besides increasing the productiveness of the soil, the cowpea also improves its general condition, making heavy clay soils more open and sandy soils more compact. The cowpea has the distinct advantage of making a good growth on soils which will not produce profitable yields of other legumes or cereals. It is an excellent green-manure crop for vineyards and orchards.

Except on the poorer soils, results indicate that it is decidedly more profitable to utilize the cowpea as hay or pasture and then plow under the stubble than it is to plow under the entire crop. About 85 per cent. of the fertilizing and soil-improving value of the cowpea is contained in the hay and about 15 per cent in the roots and stubble. Feeding experiments indicate that much of the fertilizing value of feeds is recovered in the manure. It is possible, therefore, to obtain the feeding value of the cowpea as hay or pasture and, in returning the manure to the soil, to save a large part of the fertilizing value, provided the manure is well handled. When the entire crop is plowed under, a more beneficial and lasting effect is obtained, but this advantage is not sufficiently great to equal the feeding value of the cowpea.

Light or sandy soils that have been cropped for a long time and need humus receive greater benefit from plowing under the whole crop. When, therefore, the improvement of the land is the sole object, the entire crop should be plowed under to obtain the greatest value. In utilizing the entire crop for soil improvement, it is best to plow it under when green, before being killed by frost. The green plants decay more readily and are superior to dry plants in their fertilizing effect.

The results of analyses made by one of our Southern Agricultural Experiment Stations show that 1 ton of cowpea hay contains 47 pounds of nitrogen, 10 pounds of phosphoric acid, and 29 pounds of potash.

"Make It A Bundle Week" is coming. It will begin June 1. During that week everyone in this county isappealed to by the Near East Relief, to bring all the clothing they possibly can spare, and shoes, to centers that will be announced later.

Clothing, almost unlimited, and shoes, are needed at once, by thousands of men, women, and children in the Caucasus. The appeal, by the Near East Relief, is made especially to help the Armenians, Syrians and Assyrians, but there are people of many nationalities in dire straits. Many of them are almost naked, many in the mountainous regions are barefooted in the snow; these include little children, wearing rags that fail to protect their frail little bodies.

This appeal will find the householders at their spring-cleaning. They are asked, as they go over the clothing, preparatory to packing it for the summer, to see what they can spare for these people who are appealing to the Near East Relief, and they are asked to give every garment they possibly can. The merchants who are going over their stocks are asked to give what they can of shopworn goods and of shoes; they will find many things that will be wearable and all of them can be used in the Levant.

The clothing and shoes donated will be sent to New York, through Maryland Headquarters, 14 W.Franklin Street, Baltimore, and from New York will be shipped overseas to those who so eagerly await their coming.

"Make It A Bundle Week"—June1. Make it a Record Week, for this county.

Red Cross Saves 150,000 Chinese

Washington, May 18.—Through providing road building employment in the Province of Shantung the American Red Cross is now making food available to 150,000 Chinese who were menaced by starvation, according to cable advices from Peking. The work is under the direction of John Earl Baker, an American engineer, and was undertaken upon the judgment of Chinese authorities that in this way the Red Cross could accomplish most. A total of $11,000,000 has been appropriated by the American organization to finance the work.
