SALISBURY ICE COMPANY TO BUILD COMMERCIAL COLD STORAGE PLANT

Work To Commence At Once on Lot Recently Acquired of the Lime Plant

The Salisbury Ice Company recently purchased from the Salisbury Lime Company their lot of land on which the old lime plant was located at Naylor street, adjoining the Pennsylvania railroaod and the Salisbury Ice Company's plant, consisting of a little over an acre of ground, on which they propose to erect a modern commercial storage plant.

The company, ever alive to the demands of the public, realizes that this is a field which must be taken up, as this section is engaging more and more largely in the growing of apples, pears, and other fruits. It is also adjacent to the great potato growing belt of the Eastern Shore of Virginia, which has created quite a demand for seed potatoes. There are also several concerns engaged in the packing of cold fruits such as strawberries, who feel the need of commercial storage facilities. The company proposes to erect a large storage plant, divided into different rooms capable of maintaining different temperatures, and will cater to all classes of commercial storage business. It has already arranged for considerable business as soon as the storages are completed, which will be some time during the year. The company is now cleaning off the lot, and having plans drawn for this much needed addition to our commercial life and prosperity. When this plant is completed the Salisbury Ice Company will be in a position to store about 20,000 barrels of apples, 10,000 bags of sweet potatoes, provide low temperature rooms for cold packed fruits and other commodities. This venture will no doubt meet with hearty approval and support from the growers and others interested in the conservation of perishable products.

It is not only of interest to the growers of this county to have ample storage facilities in this city, but to the entire Peninsula, especially to the sections East and South of this city. This was proven this year when nine carloads of apples left this city for European markets.

Through and by the efforts of the Traffic Bureau of the Wicomico Chamber of Commmerce, the railroads have granted a "stopping off" privilege for this city. This means that a grower will not have to pay a double freight, but will get the advantage of storing his products here, and when shipment is made the rate will be based upon a through rate just as though the original shipment had been made straight through from the growers station.

To show what this means, the freight thus saved on a carload of apples from Berlin, Md., would amount to $50, and like savings would result from other points on the Peninsula.

Salisbury is a central point for a wide territory, and is the best possible location for plants of this character and ample facilities will not only prove of great aid to our local growers of fruits and potatoes, white and sweet, together with other produce that requires storage, but will be the means of bringing much additional business to the city as well as provide a real need for the entire section.

RADIO FANS SHOULD HEED INSURANCE RULES

Although Good Aerial Does Not Increase Risk, Some Companies Require Notice

A receiving set is the cause of considerable worry to some landlords who are in doubt as to how it is going to affect their insurance policy.

In flats, or apartment houses, this is likely to cause the listener embarrassment until the situation is straightened out.

When the radio fan owns his home he usually wants to make sure that the installation of an antenna is not going to endanger his own policy. Others less particular in such matters, have merrily strung up a wire without giving insurance a thought.

The listener should find out exactly what his own company requires. Should he have to string one end of the receiving wire to a neighbor's house or garage he should be armed with the necessary information to obtain permission.

Fortunately for the listener, insurance companies do not regard as particularly dangerous the lightning risk incident to the installation of an attenna designed for receiving.

If the installation of the aerial is accomplished in the approved manner, the claim, in case one is made, is not likely to be contested by the insurance company because of the aerial.

An official of one of the largest fire insurance companies recently said it was doubtful if any reputable company would contest a claim of this kind in a court of law. However, this should not be taken as an excuse for has installed an antenna.

The important thing the radio fan should keep in mind is that practically all insurance companies have a clause in their policy requiring the policy holders to notify the company if the risk under which the terms were made is increased. A fine interpretation would include receiving aerials in this class.

Some insurance companies go as far as to state that if the risk is increased without their knowledge, or without a permit, the policy becomes void. In lack of specific requirements the radio fan who desires to be on the safe side should notify the agent from whom he purchased his insurance that he has installed an attenna.

In some cases this will protect him adequately, while in others he cannot be positively sure that his policy is protected until he receives a written permit from his company.

Should it be the custom of the company to make an inspection, it is unlikely that any fee will be charged for so doing. The procedure of notifying the insurance company should be followed by the householder having an antenna attached to his home, regardless of whether the reciving set is installled in his house or in that of his next door neighbor.

One insurance official declared that due to the widespread use of radio receiving sets, the time will come when fire insurance companies will insert a clause in their policies automatically providing for a receiving aerial. Until such time, however, the policy holder should not rest easy until he has obtained a permit in writing from his company, or determined by inquiry that a permit is not required.

FIRE INSURANCE

Law Building

DENTON, MARYLAND

FIRE WASTE

According to recently published figures, one city dwelling is destroyed by fire in the United States every four minutes. Farm buildings are burned at the rate of one every seven minutes. One hospital, five churches and five school houses burn down every day.

Every day 41 persons lose their lives and 47 are injured by fire.

The prosperity of a country is determined quite as much by the amount of its needless waste as by the amount of its accumulated wealth.

As a necessity in establishing a sound basis of credit in commercial transactions, insurance had its origin enterprise and it has attained its commanding position as a world force for betterment of social conditions of mankind through the initiative, ability and courage of a group of men as much deserving of immortal fame and glory as any other class of benefactors of the human race. State trading in the field of insurance has never advanced the cause by a material improvement in practice. Necessary reforms and changes as dictated by experience have been evolved by private companies and it is due to these and these alone that insurance business has become one of colossal magnitude and world-wide extent.

LAST WORDS

Under this head the News Bulletin of the Public Service Information Committee (Philadelphia) prints the following suggestive remarks:

"I don't think it's loaded. I'll just look down the barrel and see."

"Look at this wire hanging down into the street. I'll throw it over to one side."

"I wonder if this rope will hold my weight?"

"How much electricity do you suppose these wires carry?"

"I'll just touch one and find out."

"Listen! That's the interurban whistle. Step on the accelerator .I'm sure we can beat it across."

"It's no fun swimming here. I'm going out beyond the lifelines."

"I've never driven a car in traffic before. But they say it is perfectly simple."

"I think these must be the headache tablets, although there isn't any label on the box."

ORPHANS COURT

Judges West, Harper and Shawn were present at the session of the Orphans' Court on Tuesday.

John L. Everngam, executor of Martha Everngam, deceased, filed releases from Miriam Seeders and John L. Everngam, distributees.

Fred R. Owens, executor of Josephine Edgell, deceased, filed an account of sales of the personal property of said deceased.

In the matter of the estate of Lawrence H. Smith, minor, upon petition of Otho B. Smith, guardian, the court authorized the Eastern Shore Trust Company Bank at Federalsburg to pay over to said Lawrence H. Smith funds in said bank to his credit, he being now of full legal age.

On petition of Anna Blanch Bell, guardian to Mary Etta Pippin and Ruth Anna Pippin, minors, the court ordered the withdrawal of a portion of the said minors from the Goldsboro Bank for their maintenance and support.

In the matter of the estate of Dorothy Virginia Keets and Mary Keets, minors, the court, upon petition of Joseph H. Carroll, guardian, directed the withdrawal of certain funds in the Peoples Bank for the maintenance and support of his said wards.

EUROPEAN RED MITE INCREASES IN STATE

Growth Is Such As To Make New Operations Necessary

IN WESTERN SECTION

College Park, April 7.—The appearance in large numbers of a comparatively new insect pest, the European red mite, will necessitate a change in the spraying operations of fruit growers in the leading apple and peach producing sections of the State this year.

When the mite was first observed in orchards in Harford county a number of years ago, methods for its control were undertaken by the University of Maryland Experiment Station. Investigational work, conducted by C. C. Hamilton, of the Department of Entomology has shown that it is advisable to apply what is known as a delayed dormant spray to kill the winter eggs of the mite.

Sprayed in Spring

On apple trees the delayed dormant spray is usually applied in the spring when the buds begin to show silver green. Usually the spray is a concentrated solution of lime and sulphur. This year, however, a lubricating oil emulsion or a miscible oil, applied according to directions of the manufacturer, is being recommended for those sections where the European red mites are prevalent.

In the case of peach trees, harboring red mite eggs, a lime-sulphur application is recommended before the buds swell, followed by a lubricating oil emulsion or miscible oil application.

"Experimental Work," says Mr. Hamilotn, "has shown the deirability of killing the eggs of the past rather than attempting to control the mites after the eggs have hatched. Summer control of mites requires more thorough spraying than is usually done, and in addition there is always a possibility that with the favorable weather conditions the mites may increase so rapidly that severe injury may occur before the infestation is noticed or can be checked.

"As shown by laboratory and field tests the winter eggs of the mite can only be controlled effectively by the use of oil sprays. If properly applied most of the miscible oils and oil emulsions should give control of the winter eggs.

Home-made Aid Effective

"However, experiments have shown that soap oil emulsions, both proprietary and home-made, have given as good control as miscible oils, spread better over the trees and are cheaper.

"The summer stages of the mite have been effectively controlled on apple trees by the regular applications of lime-sulphur where the spraying was thoroughly done," says Mr. Hamilton, "but sprays recommended for peach trees have failed to give good control. The use of the oil spray during the dormant period is therefore important in the case of stone fruits."

Eggs of the red mite are reported to be present in sufficient quantities in most orchards in the Hancock, Hagerstown, Smithburg, Frederick, Westminster and Havre de Grace sections to necessitate the use of the oil spray, it is said. Eastern Shore orchards are not so heavily infested.

VERNON

Rev. C. S. Larrimore, former pastor of Union M. P. Church, has resigned from the M. P. conference and entered the M. E. He is stationed at Gumboro.

Housekeeping, gardening and poultry raising are claiming the attention of our housewives.

Mr. and Mrs. R. Wesley Ross attended the dedication of the new duPont school building at Houston, which was greatly enjoyed by citizens of progressive education, a large crowd being present. The speaking was exceptionally fine, after which cake and cream were served. Mr. duPont is to be congratulated and complimented by educators everywhere, as well as the citizens of Houston for his generosity, and his name will be highly honored long after he has passed to his great reward. May the pupils do him credit by surpassing any other generation ever before in existence, and hand down to succeeding generations the munificence of the gift of their wonderful benefactor. Like Washington, Lincoln and Columbus, Pierre L. duPont will be more highly honored in after life than at present, and noble and imposing monuments greater than stone or marble and disseminating that which time can never efface will be in evidence throughout the length and breadth of our commonwealth, and he will be known from center to circumference of our beloved country as the godfather of his native state.

Mr. and Mrs. Lawrence Price and son have been spending several days with Mr. and Mrs. Jacob Price, of Burrsville.

George Swain, formerly upper grade teacher of Houston, attended the dedication of the new $30,000 school building at that place.

Mrs. Margaret Simpson has been on the sick list. She and her daughter, Miss Edith, have been entertaining a great deal of company.

R. W. Ross has been a recent Dover visitor.

Mrs. Lynn is spending some time with Mrs. J. L. Hopkins.

Mrs. Charles Truitt is spending some time with Mr. and Mrs. William Blessing.

Benjamin Hopkins attended the box social at Potash.

Mr. and Mrs. Hugh Vincent have removed near Harrington.

Mrs. Alyce H. Ross attended the state P. T. A. convention and luncheon at Dover. It was a very enjoyable affair.

Miss Florence Anthony has had a return of her old trouble—appendicitis.

Mrs. Alyce H. Ross was an invited guest to the Delaware women's luncheon served in the gold ballroom of the Hotel duPont April 7, and has been an invited guest at the alumni reunion and conference at Teachers' College, Columbia University, April 25 and 26, to renew old acquaintances, and to the $13,000,000 library building and to Russell Hall at the dedication of the several million dollar building which has been about a year in completing; all these being delightful affairs for inspiration, sociability and intellectuality.

FEMININE TOPICS

People evidently are losing their superstition about opals. At any rate long chains of round, milky opals are considered chic today. The opals are alternated with rose quartz or black onyx.

—

A huge tassel, frequently a yard and a half long, is the chief adornment for evening wraps now. A scarf of velvet, brightly lined and ending in one of these big tassels, often takes the place of a fur collor on the evening cloak.

—

One of the newest little tailored models for the summer is of "Grain dePoudre" (a sort of poplin) bordered with three rows of black and white check designs, worn over a skirt of the same material and giving a rather amusing effect.

—

The handkerchief today has grown more giddy in coloring and has become an important article of dress. Debutantes are fastening their handkerchiefs to small rings which they wear upon the little finger

—

White evening gloves have regained their former prominence in the wardrobe of the well dressed man or woman.

—

Instead of shoulder straps, the Parisienne today frequently employes a pair of long, jewelled pins, patterened after the ancient ornaments from Thebes. These pins are adequate now that the neck line is getting higher.

—

Scotland is coming bravely into its own these days. One of the fascinating new turbans is nothing more nor less than a length of gay Scotch tartan in silk, gathered into a big knot over the right ear.

Your Garden Best

Vegetables, sun-ripened on your plants and vines and gathered just a few minutes before cooking, are vastly more delicious, wholesome and healthful than the best you can buy.

But the quality of your seed is vitally important to your garden's success. Plant nothing but the best seed. Our Seeds are tried and proven and every packet is a guarantee to successful gardening.
