F.—Stops on signal to receive or discharge passengers.

TAKE NO CHANCES WITH A SORE THROAT

Outbreaks of diphtheria in different parts of the state since the opening of the schools in September, have focused attention on the importance of immunizing children against diphtheria so that they may be protected from this dread disease.

Figures given out by Dr. R. H. Riley, chief of the Bureau of Communicable Diseases of the State Department of Health, show that during the first six weeks after the schools were opened this fall, 133 cases of diphtheria were reported in contrast with 98 cases during the corresponding period in 1924. "Diphtheria is one of the diseases in which we cannot afford to take any chances," said Dr. Riley. "The germs are spread from the throat and nasal discharges of a person who is ill with diphtheria, or who is a 'carrier' of diphtheria germs. 'Carriers' are persons who though not sick themselves carry the germs in their noses and throats, and transmit the disease when coughing or sneezing

"When a suspicious case of sore throat, croup, or tonsilitis occurs, time should not be wasted on home remedies, but a doctor should be sent for at once, so that antitoxin may be administered without delay. Just as any up-to-date fire department keeps supplies of fire fighting materials at central depots, so the State Department of Health has supplies of diphtheria antitoxin at easily accessible centers throughout the state, and no nome in the state is more than 3 or 4 hours distance from one of these supply depots. Before the use of antitoxin was discovered, the disease was fatal to one out of every two children stricken. Now, prompt treatment with antitoxin, will nearly always save if he canont be reached, the local health officer, gives smaller doses—protective doses—to the persons who are nursing the patient, or who have come in contact with him. The smaller dose of antitoxin protects the person temporarily, only—that is for a period of from two to three weeks After that, the immunity, as we call such protection, wears off.

"But we have a method of protecting or immunizing against diphtheria so that the immunizaton will last for a period of years. For this complete immunization a different substance is used—toxin-antitoxin—it is called. As practically all children under 12 are susceptible to diphtheria, it is no longer necessary to give the children a susceptibility test, but time is saved by going right ahead with the treatments The immunization clinics that have been held in the schools in Baltimore and in many of our county schools, have been based on this knowledge. Three treatments, given at intervals of a week apart, are necessary to complete the treatment—with a test at the end of six months to see whether or not the treatments have been effective.

"It is better to protect the children against diphtheria than to let them run the risk of getting the disease. You are no tonly protecting them against the disease, the suffering and anxiety that come with it, but against the dangerous after-effects which usually follow the 'catching' diseases of early childhood—damage to eyes and ears, to the heart and to the kidneys.

"County commissioners and County Boards of Education will be rendering untold service to their communities by providng the means which makes this protection of the children possible."

last Tuesday morning, October 20, at 11 o'clock. He had only been sick 24 hours. He leaves a widow and five children. Mr. William Harrison and Roland Trice, Mr. Harry Ritchey and Mrs. Gardner Williams. The funeral was at Concord church Thursday afternoon, the Rev. C. H. Atkins having charge of the servicesfl Burial at Federalsburg cemetery.

MONEY TO LOAN on mortgages. Fred R. Owens, Attorney-at-Law. Denton, Md.,

This is "HUNCH"

—one of the most famous characters in advertising history. Recognized all over the world as the Prince Albert man. You can find his prototype in any town. He's up on politics, baseball and horses, and has the real low-down on pipe tobacco. Name's "HUNCH."

Play this hunch and you *can't* lose

GET out that little old jimmy-pipe. Fill the bowl to the brim with Prince Albert and light up! Will you *like* it? Man, *man!* Does a kid like ice cream? Can a bullfrog dive? You bet you *will* like it, like you never liked anything before.

Because, what a man's smoke-appetite hankers for, Prince Albert's got nothing else except! Yes, *sir,* you can bet your life on that. You'll fire-up right after breakfast and stay with it till the little blue stars wig-wag "Good night."

Never was a pipe tobacco like good old P. A. Cool and sweet and soothing, the smoke zooms up the stem, bowling over pet peeves and filling your system with a new kind of joy. And how kind it is to your tongue and throat. That's because the Prince Albert process cuts out bite and parch ab-so-lute-ly!

So, slip into top-speed and head for the nearest store where they hand out jimmy-pipe joy in tidy red tins. If you haven't got a jimmy-pipe, get one now. Then borrow a match and you're all set for a smoke *experience!*

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

Look at the U. S. revenue stamp—there are TWO full ounces in every tin.

PRINCE ALBERT

—no other tobacco is like it!
