Leaders In Low Prices.

In these close times we are all looking for the place we can buy the most for our money. We pledge ourselves to give our customers and the public more for their money than ever before.

Dress Goods Department

In this department our styles are universally admired by all who see them. We make a specialty in medium priced dress goods for the masses, as well as the fine dress patterns. No two alike. Our prices are the lowest to be found for the quality of goods in all grades from the finest to the lowest.

Domestic Department.

We have prepared for the advance prices in the rush of the season and bought heavily in order to give you the advantage of the low prices. Get our prices on Canton Flannels and Muslins before buying.

NOTION Department.

Everything in this department is up to date. Hosiery for Ladies and Children at very reasonable prices. New line of Underwear, larger and better than ever. Ask to see our 25c Ladies' Vest, a leader. Also Men's three-quarter wool shirt for 50 cents. We recommend

Featherbone Corsets

FOR SOLID COMFORT.

Satisfaction Guaranteed. Give them a Trial.

MILLINERY DEPARTMENT.

Always up to date. We have secured an expert city trimmer for this season. Has had ten years' experience in Washington and other cities. All the novelties of the season are in this department, in fact everything known to the millinery trade, and cannot be surpassed not even by the large city houses. The prices will be lower than usual. From about October 1st for 10 days we will have an extensive line of pattern hats and bonnets which we would be glad to have you call and inspect at any time. A big line of art and fancy goods always in stock.

OUR MOTTO: Strictly One Price and that the Lowest.

A fine line of standard patterns. Agents for the

Domestic & Reliable Sewing Machines

The best machines for the money on the market. Prices are: Domestic $30.00 Reliable $20.00. Give us a call, we will be pleased to show you through our stock and give you our prices. It's a pleasure to show our goods.

Your friends,

T. H. HOLLINGSWORTH & CO.

Those new MEZZO TINTS are what the people want in PHOTOGRAPHS. Some call them Carbon Prints. However, they are new, and we all want the latest. You can get them in Easton only at the MORRIS STUDIO, Dover Street near Hotel Avon.

ADVANCE IN SURGERY.

The X Rays Are Working a Revolution In Medicine.

The development of the new Roentgen photography in medicine and surgery continues at an almost incredible rate. Many of the latest reports from Europe read like cable canards, but the corroborative details and confirmatory mass of particulars are enough to convince the most skeptical. The greatest interest centers now in the hospital or laboratory, devoted exclusively to cases in which the X rays are used, which has been established in Berlin by Professor Buka of the Berlin Polytechnicum. Professor Buka himself is a scientific expert who is peculiarly fitted to undertake this enterprise, since it was he who discovered that all objects penetrable by the X rays become transparent to the human eye by the aid of a Crooke's tube and a screen smeared with barium cyanide.

An important new phase of Roentgen photography is also reported from Munich. At the international psychologic congress now being held there an apparatus of special design was used which enabled the spectators to observe clearly the action of the diaphragm and heart of a subject. Just as photography has succeeded in reproducing life motion by means of the kinetoscope, vitascope and cinemetograph, so the hitherto invisible action of the internal organs may hereafter be observed. Not only that, but by the present process these Roentgen ray photographs might be taken fast enough to insure their reproduction on a screen. The children of the next generation may thus study anatomy in the most realistic fashion. As Professor Buka himself has been quoted as declaring, "Skiagraphy is still in its tallow candle stage." What will it be when it reaches its electric light era?

As for the purely medical aspect of its development, it is now stated, according to the report of MM. Lortet and Genoud to the French academy of sciences, that tuberculosis is affected by the X rays. They inoculated eight guinea pigs with tuberculosis virus, and exposed three of them to the rays for an hour daily during eight weeks. The five which were kept from the rays developed abscesses, and their health was deranged. The three kept in good health and grew fat on the rays. The effect of ordinary sunlight on bacilli has been tried in the past, but with far from such a decisive result. The Roentgen rays burn the human skin itself like sunlight, and even destroy the hair.

Another curious extension of the use of these rays is the discovery by Professors Grumbach and Du Bois Reymond of Berlin that they will not only photograph the invisible bones of the body, but also some of the softer parts as well. By means of improved tubes these two scientists have succeeded in revealing the larynx and the diaphragm. The doctor of tomorrow will evidently have no need for a diagnosis. All that will be necessary for him to do will be to pull out his little Roentgen snap shot camera and present to the patient indisputable ocular evidence of the precise ailment. Cases of wrong diagnosis will be rare indeed. Even the exact causes of dyspepsia will be revealed at a glance, and nobody will need to be apprehensive about appendicitis or in dread doubt as to the need of the surgeon's horrifying knife.—Philadelphia Record.

A Poor Oxford Scholar.

A fortunate accident, the discovery of an undergraduate's account book for the year 1682-8, enables us to trace in comparatively minute detail the expenses and in some measure the life of an Oxford student of no great means at the close of the seventeenth century. The undergraduate in question, one James Wilding, seems to have been a servitor of St. Mary's Hall, and afterward became a member of Merton college. The total cost of his degree, or rather his total expenses up to the end of the term in which he took his degree, were something less than £57, a sum which might represent in modern values about three times as much. But even such an expenditure was large compared with such cases as that of Whitfield, whose popularity as a servitor, gained by his previous experience as a tapster, enabled him to take his degree in 1735 at a cost to his friends of less than £24, and Bishop Wordsworth has recorded instances where the entire outlay was even less than that.

Board and lodging, as we have said, were extremely cheap. Though James Wilding seems to have lived in Oxford the whole year round, his total expenses for chamber rent and food were no more than £10 for nearly five years. His terminal payments were on a similarly modest scale. Ten shillings a term was his tutor's fee. Half a crown to the barber, 4s. or 5s. to his bedmaker and laundress, an occasional largess of sixpence to the buttery boy and the cook, seem to have included all of what we may term his fixed charges. His matriculation cost him 7s. 6d., his entrance to that college 5s., and the fees upon taking his degree something over £3.—Macmillan's Magazine.

A French Sculptor Insulted.

Through the discourtesy and stupidity of the local Bumbles the town of Dover has lost the fine statue of King Lear which Mr. Albert Mulot, the French sculptor, desired to present to it. Mr. Mulot made the offer through Lord Dufferin, and it was accepted, and several sites were successively selected and abandoned for various reasons. Now the corporation, although it has had a photograph of the statue in its possession for a year and could have sent some one to Paris to examine it if there was any doubt as to its value, has coolly requested the artist to forward the bronze to Dover in order that they may come to a decision concerning it. Mr. Mulot is naturally indignant at this scurvy treatment and has promptly withdrawn the offer. This is not the first time within recent years that works of art have been lost to the public through the pettifogging behavior of public authorities.—London Figaro.

ENGLAND'S BEST SCOUT.

He Is a Fighter From Texas Engaged In the Matabele War.

Wherever you go you find the American, and he is never in the rear ranks, writes a London correspondent of the New York Press. The best scout in the Matabele war is an American, Burnham, a Texan, who wears a Texan sombrero and rides on a Texas saddle. He fights for the pleasure of fighting, and will be sad when the Matabele war is over. "His education and his natural powers of inductive reasoning," says an English newspaper correspondent, "raise him at once to a high rank among the scouts of this or any other country." Burnham's eyes are the wonder of all beholders. They are small, roving blue eyes. Women fall in love with them. Cecil Rhodes says they can see right through a mountain when a Matabele is on the other side of it. Another correspondent declares the sinewy little man—he is only 5 feet 4 in height—to be a veritable pocket edition of Hercules. Then he adds most impressively, "and withal he is modest and truthful," which is something wonderful and unaccountable in South Africa.

Burnham's greatest feat was the shooting of M'limo under circumstances that would have done credit to Davy Crockett. M'limo was the great witch doctor of the Matabele. He started the rebellion, saying that he could turn away the bullets from Uncle Hiram Maxim's patent music box into the water if his fellow countrymen would only bring him presents in return for the favor. His throne was in a cave which was the center of pilgrimages for the natives far and near. Burnham determined to kill him. The British officers laughed at his attempt as a "fool's errand." But he enlisted the assistance of a sturdy young Englishman named Armstrong, and they started for M'limo's cave. The hills were fairly swarming with natives, and Burnham and Armstrong traveled by night and slept by day. They led their horses so as to make as little noise as possible and also to keep them fresh, as they knew that after M'limo had been killed it would depend upon their horses whether they would be able to return to the laager or not.

When they arrived in sight of the cave, they found hundreds of natives about, but were disgusted to find that M'limo himself was not there, being two or three miles away. They sent the negro servant whom they had brought with them to tell the witch doctor that some natives were waiting for him with great quantities of presents. Then, like the good scouts they were, they moved on some distance from the place where they told the servant they would wait for him, so as to be on guard in case he played them false. But in doing so they ran plump into a body of Kaffirs. Had the Kaffirs been Matabele the two scouts would have been killed then and there. Burnham pretended they were in great fear of M'limo and wanted to make him presents. The Kaffirs persuaded the Matabele to leave the scouts alone until M'limo came and decided what should be done with them. So they started down the road from the cave to meet M'limo. When they met him, Burnham saw that if he shot M'limo the whole crowd of natives would be on them in a minute. After going through a long orgy M'limo invited them into a cave alone and told the natives to clear out. No sooner were they in the cave than Burnham sent a bullet through M'limo's skull.

"We didn't wait to lay the body out," says Burnham, "but we ran for our horses with all our might. The niggers followed and shot at us repeatedly, but their aim was bad. We put our horses to it for all they were worth. It seemed to me that our horses jumped over some rocks as high as their heads, and it is a wonder to me that they did not break their necks and ours into the bargain." Though the killing of M'limo did not have the effect that was expected, this detracts none from Burnham's daredevil cleverness.

What Free Trade Does.

Free foreign trade admits the foreigner to equal privileges with our own citizens. It invites the product of foreign cheap labor to this market in competition with the domestic product, presenting higher and better paid labor. It results in giving our money, our manufacturers and our market to other nations to the injury of our labor, our tradespeople and our farmers. Protection keeps money, markets and manufactures at home for the benefit of our own people.—Hon. William McKinley.

Demand For Reciprocity.

The demand for a return to reciprocity is as universal and vigorous as is the demand for a restoration of other features of the McKinley tariff. This combination will form the basis for the construction of a protective tariff that will, we trust, be enacted by a special session of congress in less than a year from now and without any suggestions from Bermuda potato growers, Australian sheep farmers, French chambers of commerce, Austrian manufacturers or British bulldozers.

Mrs. Herman Not Indicted.

CAMDEN, N. J., Sept. 11.—The grand jury ignored the bill charging Mary Herman with the murder of her two children last July. Mrs. Herman is the South Camden woman who one day walked down to the river with her two little children. After arriving at Chestnut street wharf, in Camden, she swallowed the contents of a bottle of carbolic acid and then, taking her two children in her arms, jumped into the river. Two boatmen arrived in time to rescue Mrs. Herman, but the children were drowned.
