solutions for both
hand washing of
ggs. Yet, there are
aints of black rot
es of deterioration
of eggs washed with these sanitizers.

"This indicates that some of the solutions in common use are not effective in killing the bacteria responsible for many of the egg losses," Rice said "Information on this phase of washing is needed."

"The program for check testing of the sanitizing properties of detergents now in common use should be of special interest to all poultrymen producing market and hatching eggs," Rice pointed out.

Breed Cattle Now For All Freshening

It's now time to breed cows for freshening early next fall — it's a paying proposition.

During the heavy fall breeding season last year, the Maryland Artificial Breeding Cooperative rendered 5 percent more services than the year bfore.

Th reason for the increase, according to John Dietrich, University of Maryland extension dairyman, is that more Maryland dairymen are realizing that fall freshening increases their profits.

Dietrich says there are two ways that profits are increased: 1) milks brings a better price in the fall; 2) Maryland DHIA records show that fall fresh cows produce from 700 to 900 pounds more milk than spring freshening cows.

Two other advantages pointed out by the Extension dairyman are:)(calves born in the fall and early winter get a better start because they get more attention than spring calves born when field is pressing; 2) cows are dry late summer when harwork is heavy.

ese things all add up to money in the dairyman's t," Dietrich says.

insect enemies invade homes, garages and garden tool sheds after the growing season. Most home owners are unaware of their presence.

They gain entry through open doors, cellar windows and crevices and head promptly for a nice dry refuge. You've got to look closely, for they squeeze into crevices and in between walls. The adult insect, about one-quarter inch long, is yellowish green and has vertical brown stripes down its back. If you discover one, chances are there are hundreds of others about the premises.

You'll do your landscape a good turn by executing as many as you can. Those in the cold attic will be lethargic. You can sweep them from their hibernating places and burn them. In the basement or elsewhere where it's warmer, ordinary types of contact fly sprays will be effective.

Elm leaf beetles are among the first insects to emerge in the Spring. Then they hatch their young and start their depredations. These leaf-eaters chew up so much greenery, they severely weaken many elms. This, in turn, invites attack from other insects and disease. Directly and indirectly, the elm leaf beetle is responsible annually for the loss of countless thousands of beautiful shade trees.

Farm Pointers

Many farmers have bottom land that could be profitably cleared or hillsides that need to have briars and bushes removed. Perhaps some pastures that were improved a few years ago need attention. Lime and fertilizer needs should be checked also.

If you fence according to a careful plan. you'll add considerable flexibility to your pasture improvement. Electric fence is easily installed and readily moved for rotating pastures.

Giving farm livestock and poultry all the protection and feed they need during the winter months may mean the difference between a profit and loss for the producer.

The addition of a pound of good green alfalfa hay to the winter ration of arm animals will protect them from Vitamin A deficiency.

Fire Insurance

The revised Fire Insurance rates represent both percentage increases and decreases in varying degree according to the latest five year classified experience of these companies for the State of Maryland. Rates on Residence Properties have been decreased 7%. Other classes of risks will receive rate reductions of 10% while some will receive rate increases of between 10% and 25%. It is estimated the overall effect of the rate revision will result in premium savings to the Maryland insuring public of more than $350,000.00 annually.

Extended Coverage Insurance

Extended Coverage Insurance provides protection against the perils of windstorm, hail, riot, riot attending a strike, civil commotion, aircraft, vehicles and smoke and has heretofore been available on a full coverage basis only. Now in addition to a general revision of rates for this form, a new form available at the option of the insured has been approved which provides for $50 deductible applicable to loss or damage resulting from windstorm or hailstorm.

The present full coverage Extended Coverage rate on Residential Property has been increased from .06 per hundred dollars of insurance to .09 per hundred dollars of insurance. However, the rate for the Deductible Form on Residential Property is .05 per hundred dollars of insurance.

The use of the Full Coverage Form of Extended Coverage Insurance and the newly introduced Deductible Form together with the concomitant rate adjustments will have the effect of producing approximately the same total premium for the companies and the same total cost to the insuring public of this State as the rates which have heretofore been used in connection with the old Full Coverage Form.

PARTY AT ARMORY

A game party will be played at the National Guard, Armory, Prince Frederick, Md. on Friday, January 30th 1953 from 8-12 P.M. Refreshments will be on sale. Let's see you all out and play the game.

subscribers
for the family, R. H. Dabney, Blue Cross executive director, said.

"The rates that subscribers pay to Maryland's Blue Cross for protection against hospital bills are based on the actual demand and cost of care," he pointed out.

"Blue Cross records show that Husband and Wife memberships cost Blue Cross about the same as Family memberships. This is because hospital expense doesn't depend entirely on the number of people covered; it depends also on the age of people. Older people require hospital care more often, and for longer periods.

"In the belief that each group of members should reasonably pay its own share of expenses and be self-supporting, husband and wife subscribers will be charged the same rate as family subscribers. This is fairer to all members," Mr. Dabney explained.

Subscription charges to subscribers who pay directly to Md. Hospital Service also will be increased. They will be, on a quarterly basis, $5.55 for individuals and $13.50 for families.

Although the basic benefits will remain unchanged, certain revisions will be made in the certificate which will affect benefits. These are broadening of the outpatient coverage to include minor surgical procedures as well as emergency accident care, and waiting periods of 12 months for the removal of tonsils and adenoids and for coverage of conditions existing on the effective date of membership. However, these waiting periods will not affect present subscribers.

Wood Brothers Promoted

On January 8, 1953, Mr. and Mrs. Allen Wood of Barstow, received word that there son, John, had received his Corporal rating on December 1, 1952. Cpl. Wood is stationed somewhere in Korea with the Marines.

A/2c Eugene Wood, brother of Cpl. John Wood, who is also stationed in Korea with the Air Force received his rating the first of December. A/2c Wood is the husband of Mrs. Pat Wood of North Beach.

Slebos, lots at Long Beach.

Heber MacWilliams, Sr., Wm. K. MacWilliams and Bertha N. MacWilliams to Clayton D. and Mary E. Hove, lots at North Chesapeake Beach.

Dominick Caparrota to Goldie H. Gaarder, Spencer K. Gaarder and Edith A. Hall parcel of land at North Chesapeake Beach.

Randle Cliffs Incorp. to Wm. B. and Dorothy B. Paton lots at Randle Cliffs.

George F. and Annie R. Gravatt to Arthur B. and Marion T. Fridinger lots at Scientists's Cliffs.

John Franklin and Mary R. Davis to Wilbur R. and Marie P. Coffey, parcel of ground in 1st Election District known as Briscoes' Subdivision.

The North Chesapeake Land and Improvement Co. to Arthur E. Bingler, lots at North Chesapeake Beach.
