Fatal Railroad Accident.—*A Notorious Thief Killed.*—As the train on the Queen Anne's road was returning, from Townsend to Centreville, on Thursday night, when between Cox's and Pricks stations, the cars passed over some obstruction on the track, and the conductor immediately stopped the train and walked back to ascertain the difficulty. He soon came upon a negro man, with both legs badly crushed, and a severe wound in the forehead. was still conscious, however, and gave his name as Sam Severe, and said he had sat down on the track to rest himself, and had fallen asleep. He had upon his person a considerable quantity of jewelry, several watches, a revolver, a flash of whiskey, and several other small articles. He also had a carpet sack with him, in which were articles of clothing, twenty-eight skeleton keys, a bunch of railroad switch lock keys, watches and miscellaneous articles. He was put on the train and brought on to Centreville, where medical aid was given him. He was identified as Gus. Davis, a notorious thief, who ran away from the county about twelve months ago, since which time his whereabouts have been unknown. The watches and articles of jewelry were identified as those stolen from the store of Mr. Charles E. Harmon, on Wednesday night. The wounded man lived until about one o'clock yesterday morning. We regard this accident as a fortunate occurrance, as the community has got rid of a desperate character and notorious thief.—*Maryland Citizen.*

Artificial Ivory.

By means of a simple process artificial ivory is now produced from India rubber. Two pounds of pure rubber are dissolved in thirty-two pounds of chloroform, and the solution is then saturated with a current of ammonia gas. When the rubber has been completely bleached, the admission of gas interrupted, the mass is transferred to a vessel provided with a stirrer, in which it is washed with hot water until the bleaching agent is entirely removed. The remaining product forms a kind of froth which, being pressed out, dried, and again treated with a small quantity of chloroform, is finally obtained as a consistent paste. This paste is now mixed with sufficient quantity of finely pulverized phosphate of lime, or carbonate of zinc, until it assumes the appearance of moist flour. In this condition it is pressed in hot moulds, which it leaves sufficiently hard to be turned, planed, filed or bored. In order to imitate corals, pearls, enamels, hard woods, &c., it is only necessary to mix the paste with the desired colors previous to its being compressed.
