Coated

Look at your tongue. Is it coated?

Then you have a bad taste in your mouth every morning. Your appetite is poor, and food distresses you. You have frequent headaches and are often dizzy. Your stomach is weak and your bowels are always constipated.

There's an old and reliable cure:

Ayer's Pills

Don't take a cathartic dose and then stop. Better take a laxative dose each night, just enough to cause one good free movement the day following.

You feel better the very next day. Your appetite returns, your dyspepsia is cured, your headaches pass away, your tongue clears up, your liver acts well, and your bowels no longer give you trouble.

Price, 25 cents. All druggists.

"I have taken Ayer's Pills for 35 years, and I consider them the best made. One pill does me more good than half a box of any other kind I have ever tried."
MRS. N. E. TALBOT,
March 30, 1899. Arrington, Kans.

Does Yo' Bones Ache?

YOHN'S Rheumatic Elixir

Is an Infallible Cure for
RHEUMATISM,
LUMBAGO and GOUT,
where external remedies fail.

It is a scientific combination of various remedial agents, the efficacy of which has been proven by years of experience in the leading hospitals of the country and in private practice.

25 Cents Per Bottle.

THE USE OF NITROGEN.

Intelligent Adjustment of the Fertilizer to the Kind of Crop.

The need of definite information in regard to the application of fertilizers gives special interest to the views of Professor E. B. Voorhees of New Jersey, who has made a study of the nitrogen question. Professor Voorhees reminds the farmer that the best use of nitrogen is attained when it is applied to soils in good condition rather than to poor or worn out soils.

Also the influence of kind of crop, in determining the possible profits from the use of the materials applied, affects more particularly the constituent nitrogen. For example, the liberal application of materials containing nitrogen to crops which possess a low market value may result in a maximum production—that is, as large an increase in yield as it is possible to obtain—yet because the nitrogen is so expensive the value of the increased yield may not be equal to the cost of the nitrogen applied. On the other hand, its application to crops of a high commercial value, though not causing so large a proportionate gain in crop, may result in a larger profit, because the cost of the nitrogen, though considerable, is relatively a small item when compared with the increased value of the crop obtained from its use. This adjustment of the fertilizer to the kind of crop is not a matter of indifference.

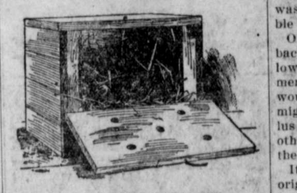

In the next place, the form of nitrogen used is very important, particularly in the culture of early market garden crops. Market garden crops, as turnips, beets, tomatoes and others, in order to be highly profitable, must be grown and harvested early. At this season the natural soil agencies are not active in the change of soil nitrogen into available forms, and the plants must therefore be supplied artificially with the active forms of nitrogen if a rapid and continuous growth is to be maintained. Their edible quality is dependent to a marked degree upon this rapidity of development, hence a supply of plant food in reasonable excess of ordinary demands is essential in order that unfavorable conditions of season may in part at least be overcome.

Nitrogen exists in commercial products in a form that is immediately available—namely, nitrates; yet the fact that a nitrate is extremely liable to loss makes it desirable to determine first whether this most available form is in actual practice of greater or less service than those other forms which are rapidly changed into this active form, but which before their change are not liable to be lost from the soil. For example, the nitrogen in nitrate of soda is immediately available to the plant. If it is applied before or at the time of seeding, in such quantity as to meet the entire demands of the crop, an opportunity is afforded for loss previous to the time that the plant has thrown out its roots and is able to gather it from the soil, and also during its early growth, when it is unable to gather it rapidly. Sulphate of ammonia and dried blood are forms which change very rapidly into the nitrate form, but which previous to that change are readily held by the soil.

In the use of any of these forms, therefore, the conditions which prevail between the time they are applied and the time that they can be used by the plants would determine their relative usefulness, and it is, therefore, quite possible that under the same methods of application the one on the average might be as useful as the other, yet theoretically the active form would be the most desirable.

How Canadians Sit Hens.

At one of the Canadian experimental farms the sitting hens receive no more attention than it is thought any careful

BOX NEST FOR A SITTING HEN.

farmer would give them. The diagram shows one of the nests, which are made of straw arranged in small square boxes without bottoms and with hinged door in front.

Popping the Question.

A writer in Lady's Realm says there are certain precautions which all lovers should take when proposing. Never propose, says an old student of woman, when returning from the theater. She will be still under the spell of one of the actors, and beside his romantic figure you dwindle into insignificance. It is better to propose on the way to the theater or some entertainment. Rather than upset an evening's enjoyment by rejecting your suit, she will accept you. Never, continues our mentor, propose to a young lady after having a meal with her. Her imagination is chilled by the process of digestion, while there is nothing that so degrades a man in a girl's eyes as to see him eat a hearty meal.

Was it not Charlotte Bronte who lost her admiration for Thackeray after seeing him eat? On the occasion of their first meeting at a dinner party Thackeray took Charlotte Bronte down to dinner. Thackeray was hungry, and as he ate steadily at his dinner her admiration and awe gradually faded away. At last, when she saw the great man of her visions attacking a huge potato, she called out in despair, "Oh, don't, Mr. Thackeray!"

A Happy Expedient.

Some few years back a colonel commanding some marines was much exercised in his mind as to how to deal with two of his men who were continually fighting. Threats, pack drill and even cells were tried, but were of no avail. No sooner were they free than they flew at one another and were at it again with worse results than before.

At last he hit on a happy expedient. The next time the men were brought before him he set them to clean all the windows in the barracks, one inside, the other out, and neither to go to the next window till the other had finished. The next morning they started, and after glaring at one another for three or four windows the situation became too ludicrous. They both burst out laughing and have been good friends ever since.—London Answers.

Dig down to the *cause* of your sickness if you want to get well and stay well. Most likely it's indigestion. The irritating poisons of fermenting, putrid food, left in the stomach by indigestion, cause headache, neuralgia, nervousness, dizziness, stomachache, nausea, irritability, and all the other well-known symptoms of indigestion.

They also cause many pains a... ders which are often laid to ... and hence are not easil... pison...

CAUSE OF ROPINESS

HOW BACTERIA MAY EASILY BE TRANSMITTED BY UNCLEAN UTENSILS.

The great importance of thoroughly scalding or otherwise sterilizing all the utensils used in handling and delivering milk is emphasized by the investigation of two outbreaks of ropy milk and cream handled by two different dealers made by the New York Cornell station, says E. W. Allen in a bulletin recently issued by the agricultural department. The matter became so serious that the dealers were losing their customers and appealed to the station for aid. No complaints were made when the milk was used immediately, but when allowed to stand overnight, even at a temperature of 45 to 50 degrees F., the cream on the

ROPY MILK.

surface became ropy to such an extent that it would adhere to a table fork, stringing out in a ropy mass.

The ropiness was found to be due to the action of a bacillus which was present in the ropy cream, but the point at which the milk became infected with it was only discovered after considerable investigation. The examination of the milk of different cows as it was drawn from the udder and of the dust and dirt of the stable showed that the milk was not infected when taken from the barn. In the case of one dealer the night's milk was held overnight in deep cans set in cold water, and the morning's milk was aerated and strained in the dairy room. The brass wire strainer used for straining all of the milk into the deep setting cans proved to be in a filthy condition owing to lack of thorough cleaning. This strainer was found on two different days to be capable of contaminating milk with the specific organism which caused ropiness. Two out of four deep setting cans examined were in a like condition. In the other case an examination of the milk as drawn from the different cows failed to show any ropiness, and the contamination was traced to the cans used for holding the milk overnight or during delivery. The strainer in this case could not be charged with the contamination.

The indications were that in both of the above cases a more thorough scalding of the utensils would bring relief, and it was suggested that the smaller utensils be totally immersed in boiling water for three minutes and the larger cans be filled to the brim with boiling water for a like time. This suggestion was adopted, and immediately the trou... ble disappeared.

Owing ... bacillus c... low temp... merged in... would no... might eve... lus to pr... other for... the low te...

It was ... original so... but from t... lieved that ... used for was... which the cow... may readily be... ning water to... mud, which... may be dislo... utensils which ha... taining water sho... using again for ... purity of water us... gives no assurance ... bacteria."

Another important ... brought out was the l... may be done to innocent ... failure of consumers ... cleanse their milk pails ... Consumers who had been ... the milk becoming ropy ... transferred their patronage to another dealer, often without remedying the difficulty, because their own utensils were not thoroughly scalded. The infection was continued through their own milk vessels and gave rise to the belief that the trouble was more widespread among dairies than was the case.

Why They Keep to the Right.

"It is a rare treat for a person to go through Europe the first time," said a returned tourist. "I visited one old palace in Scotland and was walking down a long corridor when I came to a sentinel, who told me to keep to the right. I could not see any reason why I should keep to the right and asked him why, but he said he could not tell. I finally asked the custodian, and he said he had looked it up in the archives of the palace and found that nearly 100 years ago the floor was painted, and some people walked over the fresh paint. The officer of the day was ordered to station a sentinel there to keep people off from the fresh paint and have the... night. The order had never been counte... and from that day to this a sentinel stands there and tells everybody to keep to the right."—Indianapolis Press.

Antidotes For Carbolic Acid.

Alcohol and vinegar are effective antidotes for carbolic acid poisoning, a New York doctor announces. Whatever quantity of the poison has been swallowed, four times as much whisk... or five times as much vinegar sh... be administered immediately. No ... any kind should be given. "Thu... ed early enough," he adds, "... will recover."

It is very hard ... our dear ... arrival ...
