The Tale of Perfect Time in a Watch

From Mainspring and Hairsping, between them lies the secret.

The Mainspring is the power which it transmits to the active parts of the watch. The Hairspring has the control and regulates the motion. The fitting is most delicate; imagine a 100th part of a hair (impossible isn't it?). Yet it is enough to interfere in its performance, so wonderful is the adjustment. The friction from accumulating dirt, lack of oil, etc., destroys these perfect fittings. Do not let your watch run to ruin from neglect. Remember, our business is the care of watches, and our opinion costs nothing.

BUICK MODEL 35.

PRICE $1060. Fully Equipped.

Read this unbiased Government opinion of the Buick Cars, copied from the Philadelphia Inquirer:

Government Approval of the Buick Car.

Last week a model 28 Buick Motor Car was delivered to Colonel Spencer Cosby of the Department of War at Washington, to be used by the inspector of public buildings and grounds on his daily trips.

The government invited all the leading manufacturers of cars priced from $900 to $2000 to submit a car in competition to a committee of mechanical experts. The cars were driven to the designated place and the drivers dismissed. The examination was then made with no representative of any of the cars present. Motor for motor, shaft for shaft, bolt for bolt, the cars were compared, tested and appraised by the government experts. One by one cars were eliminated until but one remained. It was the Buick. Of the seventeen or eighteen cars submitted the Buick alone stood the rigid tests of quality and construction upon which the examination was based. This car was at once turned over to the government for immediate service.

This is not the first time the Buick has been selected for government use. Last year when an appropriation of $250,000 was made for experiment on road construction the Buick was the car used to drive over the various road surfaces that were laid and tested.—Philadelphia Inquirer, January 14, 1912.
