CUT THE CORDS

that bind you to your kitchen

Come down to-day and see a graphic picture of conditions that apply in kitchens that lack Hoosier convenience. The whole story is in our window.

THE NEW HOOSIER CABINET

Puts your whole kitchen at fingers' ends, and cuts your work in two. We'll put one in your home to-day **FOR A SINGLE DOLLAR.**

We start to-day to explain the new HOOSIER PLAN by which we are permitted to sell a few of these famous cabinets on surprising terms.

MOST OF THEM ARE ALREADY TAKEN

This plan differs from any other on which furniture was ever sold. Note the details.

1. One dollar puts any Hoosier you select in your home.
2. One dollar weekly dues quickly pay for it.
3. The low cash price fixed by the factory prevails absolutely.
4. The is under the direct supervision of the Hoosier Company.
5. When this allotment is taken, the sale closes.
6. If you are not *delighted* with your cabinet we will gladly refund your money.

When you think of the miles of steps this cabinet saves you *every day*, can you daily postpone looking at these cabinets *until it is too late to enroll?* The time is getting short. Come in today and look at these Hoosiers. You place yourself under no obligation.

You will not be asked to buy.

unless you realize yourself the need of this cabinet in your home. But if you do not enroll, remember, some other woman will enjoy the privilege that is now yours if you enroll to-day.

Nothing you have seen will save you so much labor in your kitchen, if you act to-day.

BUSINESS METHODS SPELL PROFIT FOR FARMERS

Should Improve Production By Use of Simple Tests in Co-operation With the Country School.

J. E. METZGER,
Maryland Agricultural College.

It is estimated that the average cow produces only about 4,000 pounds of milk and 150 pounds of butter fat per year. The cows from herds, where some attention has been given to selection, breeding and care, produce on an average from 5,000 to 8,000 pounds of milk and from 200 to 300 pounds of butter fat annually.

The important question to each farmer is how can he determine what each cow is doing? Only three things are necessary, a circular spring-balance, recordsheet and a testing outfit. The first two should be owned by each farmer since they may be had at a small cost, and the last should be purchased by the school district and placed in the local school room.

The making of the test for butter fat is quite simple, and may be done very accurately by boys and girls of the sixth and seventh grades. This would make a very valuable school exercise for one day in each month. In schools where agriculture is not taught it could be made a part of the work of the physiology class. Each boy and girl should learn how to make the test quickly and accurately and should be given school credit for the work done. The results obtained from the test will make valuable lessons in arithmetic, language and sanitation, and what is more important, it will give the boy or girl a new interest in the farm business. In addition the patron of the school will be receiving, monthly valuable information regarding his herd.

The apparatus necessary to make the test is:

1 dozen test bottles.
1 acid measure.
1 pair of dividers.
1 tester (8 bottles).
1 pipette.
A supply of 90 per cent. pure sulphuric acid.
A gallon kettle in which to heat water.
1 sample bottle for each cow.

This is only one of the many ways in which the school can be of valuable service to the community. While the school is not in session, one of the boys or girls may be engaged to make the tests at home, and be paid a reasonable amount for the service. Full directions for testing milk for butter-fat will be sent on application to the Agricultural College, College Park, Maryland.

One of the best places to store vegetables is in a cellar with an earth floor and without the usually ever-present furnace. This, or some modification of it, is used almost always for the storage of such vegetables as white potatoes, turnips, carrots, parsnips, salsify, celery and in fact, anything that requires cool or moist conditions. An earth floor is a necessity for vegetables that must be kept from wilting. Parsnips, carrots and turnips are vegetables of a class that wilt quickly if placed in a dry atmosphere. On the other hand, sweet and white potatoes and onions will do better and retain their quality in a drier air.
