Potash Discovery.—Potash deposits have recently been discovered at Searles Lake in Death Valley, California. Covering twenty square miles, seventy-five feet deep, it is thought that they will yield for a quarter of a century to the United States as much as we have regularly imported from Germany. It will be sent as a fertilizer to all parts of the country, to be scattered over the farms to feed corn and root crops.

Jarman Has Broken Arm.

The event of the season in the basketball world was the great game between St. John's and Washington quints in Washington College gym last Saturday night. The score was 25 to 11 in favor of Washington, and the 300 or more spectators who witnessed the game were tickled sick when Washington won although St. Johns had many sympathizers in the crowd. An unfortunate feature of the game was the injury to Carey Jarman, the plucky little forward for St. John's, who played a star game for his team before the accident. Mr. Jarman was thrown in a run and fell hard on his arm, fracturing the small bone in his left arm. Dr. Hines set the fracture, and Mr. Jarman returned to Annapolis with the team, where it is reported he is doing fine.

Grange Notes.

Chestertown Grange, No. 248, held a very pleasant, interesting and profitable meeting March 2, and a larger membership present than usual. The subject of lime, fertilizers, rock phosphates and farm seeds were fully discussed, and it was the concensus of opinion of those present that it was for the best mutual interests of the farmers to stand together, thereby lessening the expenses of farm operations and add materially to their cash balances. Our sisters chatted about the things dear to the feminine heart, and felt it was good to be there. On account of weather and roads we did not elect officers for the ensuing year, but will do so next Wednesday, and hope all of our membership will be present, as business of much interest and importance will come up for discussion.
