Kent Soldiers May Get Extra Pay.—Increasing interest is being manifested among the many Kent County soldiers who served in the Army or Navy during the war with Germany in the passage by Congress of the extra-pay bill. This bill, which has already been introduced in the House of Representatives and also in the Senate, authorizes an additional payment of $360 to all who served in the naval and military forces of the United States, either at home or abroad, during the period between April 6, 1917, and November 11, 1918.

TYPHOID FEVER

How To Prevent Its Spread

ISSUED BY THE

State Board of Health

OF MARYLAND

When TYPHOID FEVER appears in a family the source of the infection must be looked for in the drinking water or food taken within the preceding twenty days. The patient may not have been infected at home, but if a second case occurs this second infection will in all probability be traceable to the first patient. In a majority of instances the drinking water has become infected. Your first business therefore, is to find out the quality of your drinking water.

You can do this by asking your health officer for instructions about shipping us samples of your drinking water. **The daily supply of drinking water should be boiled.**

The infectious material of typhoid fever is produced in but one way. It grows always in the bowels and sometimes in the bladder. It, therefore, escapes from the sick person in the stools and urine. If we kill the germs in the stools and urine as soon as they are passed, there can be no spread of typhoid fever. These discharges should, th refore, be disinfected as soon as possible. You will need a large quantity of a good disinfecting solution.

Receipt For A Good Disinfectant.

To four gallons of water add enough salt to make a strong brine. Put this in a five gallon demijohn or jug and add a quart of crude carbolic acid. Shake it up well and you have a good disinfectant for stools and urine.

The crude carbolic acid, known as U. S. P. 90 per cent, is very good, and a quart will cost about 50 cents. There is a cheaper grade, known as a 36 per cent acid, which is nearly as effective.

About a pint of this solution should be put in the chamber or bed pan before it is used, so that the discharges will begin to be disinfected as soon as they leave the body. There must always be at least as much of the disinfecting solution as there is of the discharge so that more of the disinfecting solution may need to be added after the discharges are passed. If the stools are thin and watery their disinfection will be accomplished in half an hour or so, but if the stools are thick or formed, very much more time will be required. On that account it is best to have a covered jar or bucket into which the bed pan can be emptied, and to empty this jar only once in 24 hours. If the discharges cannot be finally thrown into a sewer they should be buried in the soil at a convenient spot where there is no chance of their fouling a water supply. The discharge should never be thrown on the surface of the ground, for you will hardly be successful in killing all the typhoid bacilli, and you must not place them where those not killed by the acid may be blown about in the dust or carried away by flies to infect other people.

In spite of every precaution, those who wait on the sick person will get their hands infected and it is, therefore necessary to wash the hands every time one does any service about the patient's bed or body. Whoever waits on the patient must not prepare food or drink for other persons in the house, or if it is impossible to mind this rule one must most carefully and thoroughly cleanse the hands before performing any house-hold duty outside the sick room. Good scrubbing with soap, water and a brush, and then rinsing well in fresh water will suffice for cleansing the hands.

If anyone else in the house falls sick within two weeks after the first patient, the probability is that the infection was lodged before the precautions were taken in regard to drinking water and the disposal of discharges. But if the second case occurs more than 20 days after the first case that will signify that we have made a mistake somewhere in our precautions.

Camel CIGARETTES

18 cents a package

Smokers realize that the value is in the cigarettes and do not expect premiums or coupons!

Camels are sold everywhere in scientifically sealed packages of 20 cigarettes; or ten packages (200 cigarettes) in a glassine-paper-covered carton. We strongly recommend this carton for the home or office supply or when you travel.

If you want to know what rare and unusual enjoyment Camels provide smoke them in comparison with any cigarette in the world at any price!

CAMELS are a cigarette revelation any way you consider them! Take quality, or refreshing flavor and fragrance; or, that wonderful mellow-mild-smoothness you never before got in a cigarette smoke! Yet Camels are so full-bodied and so full-of-satisfaction you marvel that so much delight could be put into a cigarette!

Camels expert blend of choice Turkish and choice Domestic tobaccos makes them so irresistibly appetizing! And, the blend explains why it is possible for you to smoke Camels liberally without tiring your taste! *You will prefer Camels to either kind of tobacco smoked straight!*

You'll realize pretty quick, too, that among the many reasons you smoke Camels is their freedom from any unpleasant cigaretty aftertaste or unpleasant cigaretty odor!

Once you know Camels you won't take much stock in premiums, coupons or gifts! You'll prefer Camel quality!
