of eggs is soaring to the
e to the fact that the production is not equal to the consumption. The high prices will remain until after Christmas and then gradually decline as the hens and pullets begin to lay. The price of white eggs is about twenty-five per cent more than brown eggs.

Those who have plenty of leaves available can use them as litter. It is doubtful if it pays to collect leaves just for this purpose. But perchance you live near a woods and have no straw rick, with plenty of time to get the same. Then it pays. Many do not regard them as desirable as straw or a mixture of straw and shavings.

Whatever [illegible] may have been doing through the summer, now that the birds are in confinement all or most of the time, their must be regularly and amply supplied. This is the only practical way of providing a substitute for the natural exercise that the fowls take when running at large, and that is so essential to their health. Especially when the birds are on heavy rations, health and production are largely conditioned upon providing plenty of litter and seeing to it that the birds have to hunt through it for the grain part of their ration.

CHURCH NOTES

I. U. Church will be open for
vice on Sunday at 10
terton at 3 p. m. I
congregation will a
vices as the rector
of interest to report
