

Oil'er up
with "Standard" Polarine medium

Your Ford is not the easiest car to oil correctly. "Standard" Polarine (medium) is a *quality* oil that does the trick. The proper oil for other cars, too. Insist on seeing the name.

Ask for it by name

"STANDARD" Polarine Medium

The wrapper
is your protection—
let the label be your guide

Better than words can describe

WITHIN the white parchment wrapper of Corkhill Ham or Corkhill Bacon is the finest product of its kind that more than a half-century's experience has developed.

We are proud of Corkhill ham and bacon; they are worthy company for the other *quality* meat products of our daylighted plant. The improved method of curing gives them a flavor that is distinctively delicious and mild.

So, let the Corkhill label guide you. It will never fail to justify your trust. Your dealer has Corkhill Ham and Corkhill Bacon—or will get them for you, if you ask him.

Say Corkhill
All Corkhill Products are Government Inspected.

J. D. BACCHUS,

Farmers, List Your Repair Needs

It would be hard to find a farmer who at some time or another had not lost valuable time waiting for necessary repair parts. Take this territory and total up the time lost in this way and it will astonish you. And all because repairs are not odered as early as they should be.

There is no better time than right now—just before the busiest season on the farm—to go over your machines carefully, make a list of repairs you are likely to need and send it to us. With this list in our hands, we can order our stock so as to be prepared to meet every call promptly.

Repair part service is a necessary part of our business. We realize what it means to you in time and money to get what you need at once. Help us to help you by making up your list now and sending it in to us.

Poultry Notes

NEWS OF THE POULTRY YARDS THAT WILL INTEREST OUR READERS

Hard-boiled eggs are much used in chick feeding, and rolled oats are excellent. Many of our customers prefer this feed as a starter to anything else. Eggs are rich in food elements and should not be fed in too great quantity Your mash would be improved by the addition of wheat products; make it equal parts by weight of cornmeal, sifted ground oats, wheat middlings and sifted beef scrap, with two parts of wheat bran added. The sifting of the ground oats and beef scrap is for the purpose of taking out the coarse hulls and large parts of the scrap for chicks under five or six weeks old. Either sweet or skim milk may be used to moisten mash, though sour skim-milk or buttermilk, if milk is to be purchased, would be much better than condensed milk, and would cost less. Do not use cottonseed meal in the mash. It is not a fattening food and is of doubtful value in a poultry mash.

The greatest number of eggs laid by any Plymouth Rock in one year at the New Jersey contests was laid by a White Plymouth Rock at the Vineland Egg-Laying Contest in 1916-17. She laid 301 eggs. The highest Barred Plymouth Rock production is 313 eggs. We don't know at which contest this was made.

Many a case of so-called leg weakness in both mature and partly grown chickens is due to the presence of intestinal parasites. These may be tapeworms or they may be the more common roundworms. Roundworms appear to be rather easily eliminated by the use of two pounds of tobacco dust or pulverized tobacco stems to every hundred pounds of dry mash for three or four weeks. This may have to be repeated after an interval of time equal to the period of treatment. The tapeworms, according to authorities, are more difficult to get rid of.

Fowls can live and thrive without any meat feed of any kind. Still beef scraps and limited quantities of green cut bone pay better than any feed stuff that can be bought.

Geese are easy to raise, cheap to feed and are long-lived if they are kept for breeding. They are perfectly hardy and will live out of doors in seemingly perfect comfort during the coldest weather, yet the poultry farms of our country raise but comparatively few of them. More geese should be kept.

No man can learn the whole of the poultry business by simply reading the magazines and poultry books, but in them he can find the knowledge and a foundation on which to begin which will not fail him.

It is claimed that chicks that are forced when very young do not make as rapid a growth as they approach maturity as do those that have been feed regularly on a modern and substantial ration.

Try to breed good fowls and follow up your improvement. Do not rely on culls.

The chickens hatched in March or April (of the large breeds,) commence laying in the fall and keep it up until March. Then, if sitters are wanted, they are ready for business; if they are not allowed to sit they are in their best condition to produce a vigorous progeny.

Those who should know, claim that meat in some form is necessary when fertile eggs are wanted.

Sprouted oats, wheat or barley are among the best and most popular of green feeds now and at any time.

Keeping poultry is not hard work, it is work that must be done regularly and thoroughly if one would succeed.

The nests often reach a temperature above that of incubation, during hot days or even during relatively cool days if the sun shines brightly. Nests should be constructed so that the sun cannot reach any part of them and so that there will be a good circulation of air not directly in contact with the eggs.

For the average breeder the hatching season is short. The man who sells bred-for-production stock usually confines his incubating operations to three months—March, April and May.

The fancier generally makes use of a longer period—about five months because he has a smaller number of birds and because he plans to have birds ready for the early shows and also for the very late ones.

A great deal depends upon the kind of birds raised for that determines the rapidity of its growth into maturity. We all know that a Leghorn or any one of th Mediterranean breeds matures much faster than one of the heavy breeds, such as Orpingtons, Rocks or Giants. But we may fairly say that all of the hatching must be done in the short space of three to five months and the effort must, naturally, be to secure the highest per cent of fertility during this important period, for, as indicated in the title, there is nothing but gloom in trying to hatch infertile eggs.

If ever a poultry success has been made without earnest endeavor, it has not come to our notice. Success in any undertaking can only be attained in one way, and that as the result of study, of mastering conditions, and of earnest labor toward that object. All this most strongly applies to poultry production when breeding for improved quality combined with the greatest possible worth. If you will but study the lives and works of our many great breeders, you will find that they were, first, students as well as workers; and, second, that they have the confidence in themselves and in poultry possibilities to give their best and their all to its production.

ROCK HALL

Mrs. Maud Warran, of Betterton, spent last week with her sister, Mrs. B. F. Sewell.

Mr. and Mrs. Walter Davis and children, of Baltimore, were overnight guests Saturday of their parents, Capt. and Mrs. Charles E. Davis.

Mr. James B. Turck has returned from a month's pleasant visit to relatives in New York.

Mr. and Mrs. Thomas E. Joyner visited the latter's daughter, Mrs. W. A. Hunter, and Mr. Hunter in Baltimore Sunday and Monday of last week.

Mr. and Mrs. C. A. Blackiston have as guests this week their daughter-in-law, Mrs. Noble Blackiston and three little girls.

Mrs. Hynson Carter was a visitor to Baltimore Monday.

Miss Rila Vansant spent the week end in Baltimore with her cousin, Miss Mary Edwards, who has now returned home for a lengthy stay.

Mr. and Mrs. George Wooley and family were supper guests Sunday of Mr. and Mrs. G. Price Orr.

Mr. and Mrs. Fred Williams entertained at Easter their son, Fred, Jr., and Mr. and Mrs. Edward Auffarth and daughter, Oneida, of Baltimore.

Mr. Theodore Gladski has had as guests his brothers, Messrs. Frank, Stephen, Joseph and Stanley Gladski.

Mr. Owen Clark will move from near Tolchester to his new bungalow in town the latter part of the week.

Mr. and Mrs. Charles Davis, of Baltimore, came Monday for a visit to their parents, Capt. and Mrs. Chas. E. Davis and Mrs. Sarah Whaland.

Mr. and Mrs. Marion Parsons and Mrs. Hicks Loller, of near Chestertown, were Sunday evening guests of Mr. and Mrs. Charles Parsons.

FISH LAW TO BE ENFORCED

Violators of the State law covering the catching and selling of undersized fish will be prosecuted vigorously, it was said this week.

Small white perch, yellow perch and catfish are being thrown on an already overstocked fish market, with the result that many of the undersized fish remain unsold and are consigned to the dump, it was said.

The law in regard to the size of fish prohibits the catching and selling of white and yellow perch and catfish less than 7 inches long, pike under 14 inches, rock, sometimes called striped bass, under 10 inches, tailor under 8 inches, stnrgeon under 20 pounds or rock over 20 pounds in spawning season of April, May and June.

Wholesale fish dealers who accept small fish were warned that they were encouraging violators of the law.

Several arrests have been made in Talbot and convictions obtained against violators of this law.

—The jury in the $100,000 damage suit of Miss Catherine R. F. Francks vs. the Victory Sparkier and Specialty Company, of Elkton, on trial in the Circuit Court for Caroline county since April 14, save Good Friday, on Thursday night awarded her a verdict for $22.500.

TRAFFIC~

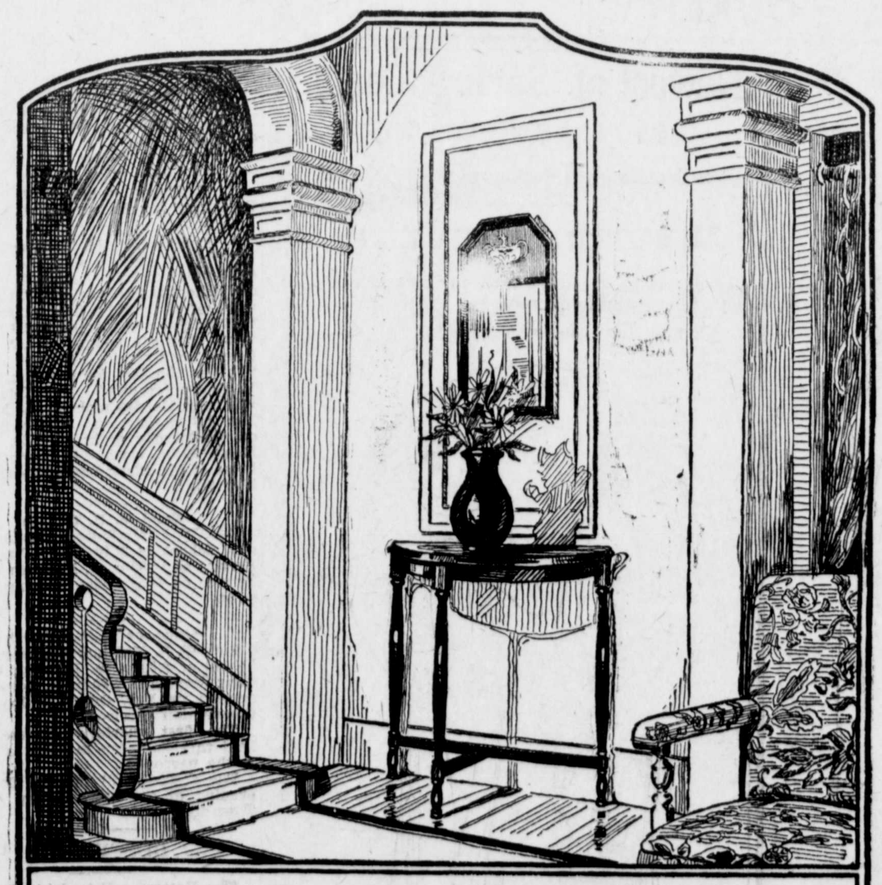

Knowledge, comfort, wealth, even safety, are dependent on the highways over which men go. Every increase in a road's usability is a fourfold benefit.

Today permanent highways have proved that they are both most usable and also ultimately cheapest. And the one material that makes this possible is Portland Cement, which, despite wide general demand, remains the cheapest of all manufactured products.

Atlas, through developing the rotary kiln, did more than anyone else to make Portland Cement actually cheaper today than thirty years ago. And in selecting the building material dealer as the only link between Atlas and user, assured distribution economy.

DODGE BROTHERS TOURING CAR

Important Improvements

New Front Axle Makes Driving Easy

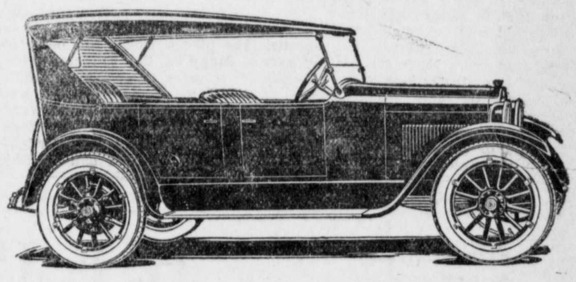

The front axle has been strengthened for greater margin of safety and redesigned to afford greatest possible ease in steering.

Springs Now Very Long and Underslung

The rear spring is underslung and semi-elliptical in type It is increased to 55 inches in length—ten inches longer than the old spring. Riding ease is now a feature of Dodge Brothers cars.

The front springs have been increased from 1¾ to 2 inches in width and are composed of more leaves of thinner stock, thus greatly improving riding comfort.
