

Can this Engine ever wear out?

Pressure-Feed Lubrication: In the Oldsmobile Six engine you find pressure-feed lubrication to every revolving part. This superior lubrication system means long life.

Big Crankshaft: Perfectly balanced. That means elimination of vibration—and vibration is another foe of long life.

Oversize Bearings: Airplane type—used in Liberty engines during the war.

Splendid Cooling: Water flows all the way around all the six cylinders, valve seats and spark plug openings. Result—perfect cooling, no distortion, longer life. Valves are unusually large, cylinders are "honed" to a glass-like smoothness, perfectly-fitting grey iron pistons carry hammered rings. Result—perfect compression, surplus power and unusual long life.

You owe it to your pocketbook to investigate this Oldsmobile Six thoroughly.

POULTRY NOTES

Items Of Interest Concerning The Raising Of Poultry That Will Interest Our Readers

Occasionally one sees young poultry confined to a lot which is entirely devoid of vegetation or nearly so. Under such conditions scrawny, much-ruffled, and poorly developed chicks are in abundant evidence. For young stock succulent green feed is vital to that rapid development which is so highly necessary to profits in poultry raising, and for mature fowls it is essential for good egg production and health.

The bare poultry yard is most generally noted with farm or small home flocks. In many instances it is due to lock of space, but more often to the lack of proper arrangement of the hous ing, fencing, etc., to insure a constant supply of succulent green feed.

Succulent green feed furnishes natural plant juices which have such an indespensable stimulating effect upon the digestive system, to say nothing of the presence of the vitamines it contains, that no serious-thinking poultry keeper can countainence the idea of bare yards, or anything short of an abundant supply of green food for both adult and growing stock. Young oats, wheat, rye, clover, alfalfa, etc. are the most relished of green feeds. Natural grasses are good in early season, but toward the end of summer, when grow th practically ceases, offer little tender and succulent material. Plenty of young plant growth at this season will often be responsible for earlier laying in the pullets, because of the development possible when this feed is available.

Bare yards mean bare profits, and toughened matured vegetation is little better than bare yards. Plant an oat or wheat patch now for the pullets.

Have you separated the pullets? Again, serious thinking poultry keepers insure a higher egg production for the coming winter by insuring a better development of the pullets. Separating the cockrals, and giving them a run to themselves is an important phase of management and insures this better development of pullets as well as the cockerels intended for breeding.

Why keep a lot of cockerels around the yard? Save only the best to use or sell as breeders, and either market the rest as broilers or caponize them for the holiday and winter markets.

Do you still have the male and females mated up? Fertile eggs cost the American farmer $15,000,000 every year. Why? Simply because he does not take the males away from the females after the hatching season. In summer fertile eggs spoil in one-fifth the time infertile do, causing much loss on account of developing embryos. Swat the rooster and market him! Keep all females unmated. The presence of the male has no influence upon the number of eggs laid. Produce infertile eggs. They save loss, and are in greater demand.

The time is now at hand to weed out the earlier moulters and le st profitable layers. Force-molting is sometimes practiced, but the practice of forcing the molt in order to get fall and winter production from hens without interrupting often ends disastrously. A double mit is very apt to occur one in summer and one fall or early winter. Summer molters are the "long vacationists", while the fall or winter molters are the "short vacationists". No evidence yet seems to be established that would appear to make forced-molting a profitable or advantageous practice.

Careful feeding and management will give heavy summer and fall egg production from good hens, and their fall or winter molt will usually be very short as compared to a summer molt. A good proportion of pullets in the flock will keep the egg basket filled when the hens begin the fall or winter molt. Cull out the "summer boarders" and persistent broodies!

Don't forget that disease is always waiting to get a foothold in your flock. Constant warfare to prevent a hold is the only insurance against disease—"the eternal losing hand." Keep the houses and premises clean. Disease is the boon companion of neglect.

IT HAS LASTED

Chestertown People Must Believe Such Convincing Testimony as Mrs. Kirby's

No one in Chestertown who suffers backache, headaches, dizziness, rheumatic pains or distressing urinary ills can afford to ignore this twice-told story of a Chestertown resident. It is confirmed testimony, telling of last ing benefit from Doan's Pills—a stimulant diuretic to the kidneys. It's evidence that no man or woman in Chestetrown can doubt.

Mrs. S. E. Kirby, 101 N. Queen St., says: "I used Doan's Pills with good results when I was troubled with a slight disorder of my kidneys and backache."

Over Five Years Later, Mrs. Kirby said: "Doan's Pills cured me of kidney complaint and the cure has been lasting. I always recommend them."

Price 60c. at all dealers. Don't simply ask for kidney remedy—get Doan's Pills—the same that Mrs. Kirby had. Foster-Milburn Co., Mfrs. Buffalo, N. Y.

DODGE BROTHERS TOURING CAR

Important Improvements

New Front Axle Makes Driving Easy

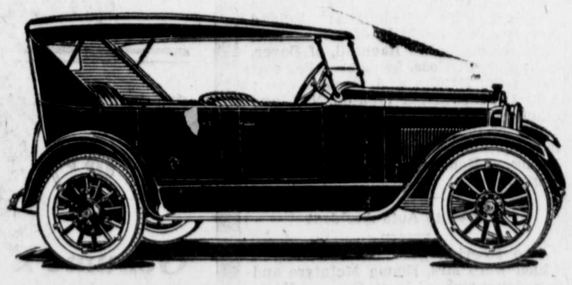

The front axle has been strengthened for greater margin of safety and redesigned to afford greatest possible ease in steering.

Springs Now Very Long and Underslung

The rear spring is underslung and semi-elliptical in type It is increased to 55 inches in length—ten inches longer than the old spring. Riding ease is now a feature of Dodge Brothers cars.

The front springs have been increased from 1¾ to 2 inches in width and are composed of more leaves of thinner stock, thus greatly improving riding comfort.

Hopkins Specialists Now Abandon Knife for Tonsils.

A few years ago, Chiropractic sounded the note, in tune with Dr. Mayo, the worlds most famous surgeon, who is president of woldr reknown Mayo Surgical Clinic of Rochester, Minn., that Surgery must some day give way to more advanced methods of Healing. That day has come!

In the Baltimore News, issue of July 25th announcement is made that Hopkins Hospital has abandoned the wholesale atrocity upon the tonsils. The extreme danger associated with tonsilar operations made it necessary for the Hopkins Specialists to devise a way to avoid the knife in the case of tonsils which are badly diseased. While the method now pursued at Hopkins is far from being the most advanced method, nevertheless it shows that Surgery is giving way to other methods, particularly Drugless Healing.

CHIROPRACTORS RESTORE TONSIL FUNCTION

The Drugless method of Chiropractic which is meeting with widespread popularity all over the country, and which is now recognized and licensed in 26 states, claim the most improved and scientific method of restoring diseased tonsils to normal condition.

The principle of Chiropractic is that normal function in any part of the body is dependent upon proper distribution of nerve force to the various organs and tissues of the body. Diseased tonsils or tonsilitis as it is called is due to a shutting off of the nerve force going to the tonsils. This condition is caused by pressure on a nerve fiber by a misplaced spinal vertebra. Instead of considering the diseased tonsils "dead" or useless, Chiropractic aims to restore normal function to these important glands by restoring the nerve power which revitaizes the tonsil tissue. The tonsils perform an important function in the process of digestion by secreting a fluid which aids digestion. The tonsils also act as filters to filter out poisonous elements, so that only pure air enters the lungs. The writer has had cases where Tonsil operations was advised, and after taking a course of Chiropractic adjustments medical specialists declared the tonsils to be entirely normal and health.
