NOTICE OF

First Meeting of Creditors

In the District Court of the United States for the District of Maryland

In the matter of Della Pennington, Bankrupt.

Notice is hereby given that on Sept. 8th, 1924, the said Della Pennington, of Kennedyville, Kent County, Maryland, was duly adjudged bankrupt and the first meeting of her creditors will be held at the law office of Sidney P. Townshend, in Chestertown, Maryland, on the 2nd day of October, 1924, at 10.00 o'clock a. m., at which time the creditors of said bankrupt may attend, prove their claims, appoint a Trustee or Trustees, examine said bankrupt and transact such other business as may properly come before the said meeting.

SIDNEY P. TOWNSHEND, Referee,
Chestertown, Md.

N. B. Creditors should at once prove their claims before a Notary Public and file same with the Referee or have them ready to file at the first meeting of creditors.

Freedom
From Washday

Is the right of every woman

No longer is it economically sound for women to spend any portion of their time over steaming tubs or turning back-breaking wringers.

The family laundry—large or small—shirts, towels, socks work clothes and dresses, table and bed linen, underwear—can not only be washed but ironed, in the modern laundry, well and at a low price.

Poultry Notes

Items Of Interest For Our Poultry Raisers And Others

Cull your flocks of pullets and hens closely and put the culls on the market Don't keep undesirables—it don't pay.

Those pullets need bodies of iron, muscles of steel, fiber as tough as whip leather. You want every one of them to lay 150 eggs during the pullet year Now that's a real "man's job" for any hen. Then you want her to do as large an egg stunt the second year and the third. You must therefore build strong keels and wide bottoms for them now. Don't be too anxious to get them laying young. Make them FIT to lay. This is your largest business in the poultry yards during the next two or three months.

A fowl annually faces no more trying ordeal than that commonly known as the molt. A fowl may be physically fit and strong so long as it is fully clothed, but the moment Dame Nature orders that the clothing shall be changed for new attire a weakening of the bird's physical forces sets in. Altho domesticated fowls generally have all the food they can comfortably deal with during the molting season, it cannot be said that they escape so many risks as do the wild birds whose food supply is curtailed. Wild birds begin to molt at a time when a diminution in the natural food supply is noticeable and yet they get thru the ordeal safely. Why? Simply because they do not experience the double strain such as molting and laying would impose upon them, and such as we—or the majority of us—allow our domesticated fowls to bear. Feed heavily during molt. You hens need it. Experience has taught me that the fowls which continue to lay thru the molt do not parent the strongest of chicks in the following breeding season, and therefore, it would appear that fowls are incapable of extracting sufficient nutriment from the foods consumed to produce eggs, a new attire and bodily tissue at the same time.

Do you know "where you're at?" A great many men fail in business for the simple reason that they do not know where they are and "whither they are tending." They simply blunder on "hoping" that all is well—but not at all certain that they are better off, or worse off, today than they were a year ago. Know what you are doing.

The development of the poultry industry of the United States into an enterprise having an annual valuation of well over one billion dollars is no mean achievement. This achievement is the more remarkable in that the rate of increase from year to year in the quantity of eggs produced has been exceeded by few other agricultural commodities. Because of the rapid increase in the human population the demand for eggs and poultry meat has been greatly augmented each year and in addition the per capita consumption of eggs ,especially, has increased materially. The constantly increasing demand for eggs has been the principal factor making for the remarkable degree of development to which the poultry industry has attained. Furthermore, since, on the best authority available, the United States will not reach its maximum population which which the agricultural industry of the country can comfortably support before we have about 200,000,000 people, it is readily seen that there is further opportunity for a considerable expansion of the industry. Still another factor must be taken into consideration. The laying hen as a producer of food products for human consumption is a smaller unit than most of the other domestic animals which are also used in the production of food for humans. It is probable that eggs can be produced more economically than many other foods of animal origin and to whatever extent this is true, it means that poultry will be relied upon to help feed the human family.

WILL CORN CROP MATURE?

This Question Is Center Of Interest Among Kent Farmers Everywhere

The race between Jack Frost and the corn crop in Kent county is exciting. The runners are now in the home-stretch, and you may take your choice. Millions are at stake. One of our Western friends went to the Iowa State Fair and talked with many farmers. He says they practically all agree on the following proposition:

They all think that with ordinary average weather about one-third of the crop will be fit to crib. The other third will be fair hog feed and the last third will be practically worthless, except as a poor grade of fodder.

With unusually good weather, which you might call almost a miracle, the proposition would step up one place. That is, we might have two-thirds of the crop pretty decent corn and another third fair pig feed. That is the very most we could hope for.

On the other hand, an early frost would put us the other way one place and would mean one-third of the crop pretty fair hog feed and two-thirds worthless except as fodder, so if you hear that Iowa has had a heavy frost along about the middle of September you will know what shape we are in.

The situation in some parts of the East is better than in the West. The crop is further advanced, and is being greatly helped by the present hot weather. An early frost, however, would be a calamity, and would send corn prices up out of sight, with comparatively few able to profit by the high figures. We are all hoping that we will have the latest fall on record.

Veterans To Meet

The last stand of the Eastern Shore Regiment of Maryland will be a matter of history after September 25. The rapidly thinning ranks of the Union contingent, comprising 1,000 volunteers of the Eastern Shore of Maryland, organized during the early days of the Civil War will hold its thirty-fourth re-union in Cambridge this mosth, and last year it was decided that this should be its last. Only 70 survivors of the unit, which took part in the battle of Gettysburg, were reported at the meeting at Federalsburg last September; but only 28 were able to attend. Since that time several others have answered the final call.

The average age of those physically able to attend the reunion was 80 years. The oldest was 93 and the youngest 77. Uuless the handful of remaining veterans decide to "stand to the last man" the venerable followers of the Union flag will bid a final farewell to their former comrades in arms in the same town in which they first signed up for military service.

—Members of the teaching staff affiliated with the Queen Anne's Teacher's Association have met in the Centreville Grammar School, and organized for the school year.

Increasing Cost of Telephone Plant and Equipment

ONE of our big tasks today is to provide the plant and equipment necessary to meet the demands of the people of Maryland for more telephone service.

¶Each telephone added to the system requires additional plant and equipment. During the last five years the number of telephones added in Maryland has been 42,000; an increase of 36 per cent. But the increase in telephone plant during the same period has been 64 per cent. Thus, while the growth in telephones has been large, it has been greatly exceeded by the increase in plant.

¶Stated another way, the plant per telephone in service in 1919 averaged $151.00. It is now $182.00 and in 1928 it will be more than $200.00 per telephone.

¶You ask why. It is because of the present high cost of building plant—first, to extend the system, and, second, to replace old plant built at low pre-war costs, with new plant built at present-day costs.

¶This process of extending and replacing plant and equipment is constantly going on. It is a part of this Company's obligation to give service to the people of Maryland. But our present rates were designed to yield a return, not on the average plant per telephone today, but as it stood in 1920.

¶It takes more net earnings now to pay a return on the property than it did in 1920. This is one of the reasons why we must ask for some moderate increases in our rates.

You Have a Chance To Win.

Watch the Number on Your Fan

In the upper right-hand corner of the new fans which we are distributing among our customers will be found a number which may win for you one-half gallon of our delicious ice cream. A number will be drawn every Saturday, and the person holding the fan with the number corresponding to the number drawn, will receive free of charge one-half gallon of ice cream. If you do not win this Saturday, hold your fan and watch for the lucy number next week, as a new number will be drawn every Saturday as long as the offer holds. The lucky number will be announced in the county papers and displayed in Gill Bros. show window. The winner should call for the prize not later than Thursday following the Saturday named.

Watch for the lucky number.

☞450 Wins This Week.

GILL BROS.,

CHESTERTOWN, MARYLAND

DODGE BROTHERS
TOURING CAR

Important Improvements

New Front Axle Makes Driving Easy

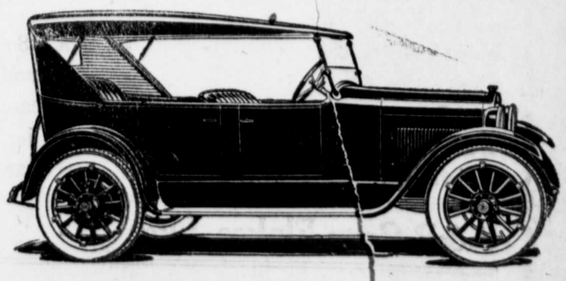

The front axle has been strengthened for greater margin of safety and redesigned to afford greatest possible ease in steering.

Springs Now Very Long and Underslung

The rear spring is underslung and semi-elliptical in type It is increased to 55 inches in length—ten inches longer than the old spring. Riding ease is now a feature of Dodge Brothers cars.

The front springs have been increased from 1¾ to 2 inches in width and are composed of more leaves of thinner stock, thus greatly improving riding comfort.
