Maccabees Caravan

Eleven states in the Union have one automobile for every family, according to A. W. Frye, supreme commander of the Maccabees, in an address here.

"California leads in the density of cars to population with one car to every three people, recent compilations of a statistician show," said Mr. Frye, in outlining plans for the Maccabees' international automobile caravan to Washington this summer. "Iowa is next with one car to every 4.1 persons, followed by Nevada with one car to every 4.2; and Kansas, Nebraska and Oregon all with 4.4.

"Of the eleven states having a ratio of less than five persons to every automobile all are west of the Mississippi, except two, Indiana which has one car to every 4.7 and Michigan which has 4.8.

"Practical demonstration of the automobile as the nation's biggest transportation factor will be given by the Maccabees caravan to the nation's capital in July. Ten thousand members of the fraternity from every state in the Union and every province in Canada in 2,500 automobiles to Washington for the quadrennial convention. The caravan will be the largest movement of automobiles in the history of America.

one car to every six persons. Only eight states have more than ten inhabitants for every car. The average

"Nineteen states have an average of for the entire nation is estimated at one car for every 6.37 persons."

Poultry Notes

Items That Will Interest and Perhaps Be of Benefit To Our Many Readers

The two hatcheries near Chestertown are still running full capacity and will perhaps do so until well into the month of June. These hatcheries have sent many thousands of chicks weekly to many customers all along the Atlantic seaboard states. The chicks turned out by these two hatcheries are of a quality that rank them among the very best produced in the country, both for vigor and hardiness, calibre of stock.

Kent County is fast becoming a chicken-producing county of note. There are at least a dozen farms in Kent and near Kent line that keep from 1000 to 2000 hens.

Get the youngsters on the ground often, but do not leave them out when it turns cold. A chilled chicken is a dead chicken, very often. You may save the chick that gets chilled, but you have set it back to such an extent it is more than apt to be worthless as a breeder.

With green things growing almost everywhere there are hundreds of thousands of fowls in this country which never get a good feed of green stuff, although there is not a poultry keeper in the country who might not have a plentiful supply of the best kind of green feed, even if he has not a square foot of land outside his poultry yards. Any one can supply sprouted oats or wheat for his fowls, even if he must use the roof of the poultry house for the purpose of sprouting his grain. Nearly every one has land enough on which to grow lettuce or rape enough for fifty fowls. Either of these vegetables may be cut off two or three times and will renew themselves, or either may be pulled out by root and a new crop planted as often as necessary. Failing these sources of supply a bale of well cured clover or alfalfa hay will make a fine substitute.

Green feed is so absolutely necessary to the best results that if we were confined to a choice of either green feed or meat feeds we would select the green feed first. We have recently had an example of the value of green feed. For a time this spring it was impossible for us to get a sufficient supply of succulent green feed for our laying hens. They were feed raw beef in the shape of butcher's scraps and given everything else they needed but green feed was out of the question, except in very limited quantities, out nearly enough for them. The hens looked well, but they ceased to lay except in a desultory way.

Then alfalfa began to come up and a supply was near enough so the hens could be fed about as much of it as they would eat. The green alfalfa was cut into short lengths with a hatchet and fed perfectly fresh. Two results were immediately noticeable, the quantity of grain consumed was cut in half and the number of eggs produced was quadrupled and this within two weeks after beginning to eed alfalfa liberally.

If any one will try an experiment by feeding one pen as good as they can be fed, except to withhold green food, and another pen in the same way with all the chopped green clover, alfalfa, lettuce, rape, dandelion tops or sprouted grain the hens will eat, he will soon be convinced of the value of green feed in the production of eggs.

Turkeys are only reared successfully where they can have free range. The breeding stock should be two-year-old hens mated with an early hatched and fully developed tom. The laying qualities of the hen are more affected by feed than in any other domestic fowl. If fed a little extra with table scrappings she will lay earlier and sit sooner. To tame the hen is not difficult, a sly morsel from the hand will cause her to linger near the house and lay in the nests of the common hens, thus saving many a weary tramp to find her eggs. These should be gathered each night and wrapped in cloths and stood on end, turning twice per week. She should not be allowed to sit until she has laid her third litter. The eggs should be put under common hens, nine or ten under each. When hatched the hen should have a large airy coop that is rain proof, as dampness is fatal. If a square of glass can be inserted to let in light and sunshine it will add to their comfort.

Freedom from insects can best be insured by dusting the poults well with powder that is fresh and strong, then wiping the hen's feathers with a cloth wrung dry as possible from kerosene, putting the young turks into baskets covered with a blanket to get rid of the lice while the hen is drying off. She can be well fed and watered meanwhile and put in the coop. Then take the poults one at a time from the basket and rub the top of the head and ides of the neck with sweet cream. This will bring to view any head lice that stick in the flesh and suck the blood, causing many deaths that are hought to be caused by disease. It needs a keen eye to see this form of vermin. They are a dark blue, sticking n the flesh, and are often mistaken for pin eathers. When the feathers are wet with cream they can be pick-d off. The cream dries in a very short time.

The trying time with young turks is when the ground is soaked and dampness penetrates their house. If one has an airy, dry shed that is not infested with rats, it is just the place for them, but rats are very fond of young fowls.

COLLEGE NEWS.

Washington Defeats Loyola 2-0 in Eight Inning Battle Baseball Track and Tennis Teams are Away This Week-end; Oratorical Contest and Y. M. C. A. represent Washington

On Saturday April 25, Washington's nine faced Loyola. The game was called after eight innings to allow Loyola's team to make boat connections.

From the first both teams were in for a fight Carroll the left handed twirler for Washington held Loyola to three hits and no runs. Washington came thro with four hits and two runs. In the first inning with one out, and man on first base, Smoot came thro with a solid hit over second base. An error on the center fielder alowed Smoot to bring the man on base and himself in, registering two (2) runs. Seven more innings passed without a score for either team, although both teams were in serious positions at times but due to errors on base running on the parts of both teams, both being able to work out of the critical positions. Washington looked serious in eighth inning with bases loaded, one out and Loyola's hardest hitter at bat. The man on third was caught off base and thrown out. The batter popped a fly ball which was caught making a third out, enabling Washington to come thro in the characteristic moment.

The track team that represented Washington at the Penn. Relays met with too steep competition for them to bring home any metals. They were losers from the poll man but did not become discouraged, finishing the race in five seconds less time than the winner.

In spite of the defeat at Penn, she will be reprented at Maryland on Thursday April 30. The contestants are;—Crouse—100 yards dash, Norris 220 yards run, Schauffer—440 yards, Hildenbrand—one half mile; Buchanan—one mile. These men have been training hard and are doing their best for Washington.

On Wednesday the first time in the history of the institution announcement was made of three atheletic teams to leave on one day.

The base gall team leaving for a two day trip, meeting teams of Blue Ridge and Mt. St. Mary's. Tennis team facing the "Racket Swingers" of Blue Ridge and Western Maryland.

The track contestants to go to Maryland meet.

The dinning hall was in an uproar, cheering and yelling for the different teams. Each was given hearty send off by an individual cheer for each team.

Washington is taking part in the State Oratorical Contest held at College Park on May 1st. This is open to the colleges of Maryland only. T. H. Owen Knight will represent us. Mr. Knight is very well prepared for this contest and is thought to possess the ability to put his declamation across in good order.

The Y. M. C. A. of Maryland, Delaware, and D. C. Colleges are holding a conference at Sherwood Forest, May 1-3. Two delagates will be sent from here; they are Leslie Timmons, President, and E. Franklin Griffin, Treasurer, of the College Y. M. C. A. The "Y" has been given much credit by the faculty for moralizing the trend of the college behavior. There is still opening for it and no doubt it will put forth its best efforts to carry out its aims.

It is somewhat unusual to have so much on for one week-end, but there is no doubt but every individual will do the best of his ability to flash the colors, "Maroon and Black".

ORDER NISI

Ordered by the Orphans' Court of Kent County, that the sale of the property mentioned in these proceedigs, made and reported by Herbert E. Perkins, Executor, be ratified and confirmed, unless cause to the contrary thereof be shown on or before the 16th. day of June next; provided a copy of this Order be inserted in some weekly newspaper, printed in the Town of Chestertown, once in each of three sucessive weeks, before the 16th. day of May next.

The report states the amount of the sale to be $250.00

The Delco-Light Millions Have Waited For

$195

F.O.B. DAYTON, O.

AS THE world's largest manufacturers of farm electric plants, we have been working for months on the development of a lighting plant that could be sold at a radically lower price—a price so low that it would bring electricity within the reach of every farm home in America.

We knew that a million farm homes were ready for electricity—that a million farmers realized the money-saving, time-saving value of electricity—that a million farm women had learned that electricity would lighten the burdens of farm life and bring new happiness and new opportunities to their families.

A Price That Is Revolutionary

We realized that a small reduction in price would not be enough. It must be revolutionary—drastic. And we wanted to be able to offer this plant on very easy terms—so that every farm home, whether owned or rented, could have the benefits that are so much appreciated on the 200,000 farms where Delco-Light is now in use.

And Now It's Ready

Today the new Delco-Light is ready. It is more than we had hoped. Quantity production—modern engineering—millions of dollars worth of machinery—research and invention—have produced the Delco-Light that can make all farms electrically lighted farms.

A 600-Watt Non-Storage-Battery Plant

The new plant is a genuine Delco-Light in every respect—full 600-watt capacity, strong, sturdily built, economical in operation. It is equipped with a standard Delco starter and an economical starting battery. And its price is only $195 f. o. b. Dayton—the lowest price and the greatest value ever offered in a Delco-Light electric plant.

Complete Installation at a Remarkably Small Cost

In addition to this, special arrangements have been made whereby the Delco-Light dealer in your community will install your plant and wire your house for five lights, to be located wherever you specify. You will receive with the plant five beautiful spun-brass lighting fixtures complete with bulbs.

And *all* of this—plant, installation, wiring, fixtures, everything ready to turn on the lights—will cost you only $53, in addition to the price of the plant itself.

A Small Down Payment—Balance on Easy Terms

Finally, we have arranged that this new low cost for Delco-Light, completely installed, can be paid on terms so easy that anyone can take advantage of them. The total cost is only $248, including freight (a little more west of the Mississippi). But you make only a small down payment. The balance is payable on easy terms, arranged to suit your convenience.

Ask for Details

Never before has such an offer been made. Never before has Delco-Light cost so little and been so easy to buy. It means that any farm home—*your* home—can have Delco-Light today.

At the bottom of this advertisement appear the name and address of the Delco-Light dealer for your community. Call on him, write, or telephone for full information—specifications of the plant, illustrations of the fixtures that come with it, details of our complete installation and wiring plan, and the figures that show how easily you can now get Delco-Light.

Delco-Light Company, Dayton, Ohio, Subsidiary of General Motors Corporation
