Paper Cups and Dishes Made by Electricity

Exemplifying the many diversified applications of electricity, ingenious machines are now used for making paper cups and dishes by a manufacturing concern in Brooklyn. The creation of these paper cups is an interesting process. Mechanical fingers on an ingenious electric-driven machine pick up a single disk of fine quality paper and place it in a section of the machine for pressing. This pressing gives the cup its shape, plaiting the sides for strength and rigidity. The piece is then transferred to another unit of the same machine, where it is sterilized by heating.

When the second step has been completed, the cup has assumed its final form with plaited sides, natural curved lip and tumbler shapes. But, as a measure of added efficiency, it is put through a third process, being sprayed with hot paraffin, which seals the plaits and gives increased rigidity and crispness. From this point the cup passes into a baking chamber, where the paraffin is drained off. The finished cups are carried along on an endless conveyor past a fan, the breeze from which hastens drying.

Relieves Workers of Stigma of Suspicion

To save workers in factories which employ in their products gold, silver, or precious stones from suffering the indignity of being selected for searching, a Danish engineer has invented a special apparatus.

Hitherto, the custom has been to stop a certain proportion of the workers leaving such factories at night, thus apparently casting suspicion upon the individuals selected. By the new invention the worker asked to adjourn to the searching-room is chosen by a machine.

The apparatus consists of a container holding a number of balls, corresponding to the number of workers engaged in the factory. Some of the balls are made of a material conductive of electricity. As the workers pass to the exit they press a button, when a ball is released. It rolls out of the container and a white lamp glows for a moment. In such case the worker passes on.

Should one of the conducting spheres roll out, the electric current turns on a red lamp, which means that the person indicated is one of those to be searched.

Wife Was His Memory

"Your story of the absent-minded minister," writes a contributor to the Youth's Companion, "reminds me of a minister whom I knew in a little Wisconsin town many years ago. He had a wretched memory, but for all that he was nothing less than a saint.

"His absent-mindedness was chronic He seldom could remember his text, and, being averse to notes, he depended on his good wife to come to his rescue. He would lean over the pulpit and say, 'What was my text for today, my dear?'

"She would tell him, and he would then proceed to preach a fine sermon from it.

"One Sunday after the singing of the second hymn he opened his Bible and, leaning down, made the usual request: 'My text for today, my dear?'

"'I don't know, I'm sure,' composedly replied his wife. 'You forgot to tell me!'"

Butterless Land

The supply of fluid milk in the Dominican republic is fairly adequate, and although it is in general use for adults, modern methods of production and distribution do not prevail. A large amount of condensed, evaporated and powdered milk is imported into the country each year and one or the other of these preserved milks is always used for infant feeding. No butter is made anywhere in the republic and the demand for this commodity in the local market is met by importations chiefly from the United States and Denmark. — New York Times.

She Pitied the Lion

Uncle had just returned home from an expedition into Africa after big game, says the Tatler; he was delighting all the family with stirring tales of adventure in the jungle.

"One of my beaters was so savagely bitten by a lion once," he announced, "that he had to have his arm amputated."

There was a short silence while the information sank in, and then the small daughter of the house said in a sympathetic voice:

"What a pity, uncle; the poor lion might just as well have had it."

Skis and Snowshoes

Owing to the thick forests of America the snowshoe has been found to be more suitable for use than the ski, which is preferred in less wooded regions. The large, flat surface of the snowshoe furnishes a larger plane of resistance to the soft snow and by distributing the weight of the wearer over a larger surface does not break the brittle crust on top of the snow, which makes progress without snowshoes impossible.

Had Reason to Think So

Giles was being questioned in the court by a lawyer who considered himself great on cross-examination.

"Do you on your oath swear that this is not your handwriting?" he asked sternly of the witness.

"I reckon not," answered Giles.

"Does it resemble your writing, then?"

"No, I don't think so."

"Well, do you swear that it doesn't resemble your handwriting?"

"I do, indeed."

"What?" thundered the bullying counsel. "You take your oath that that writing doesn't resemble yours in a single letter?"

"Yes," persisted Giles somewhat nervously.

"How do you know it doesn't?" asked the lawyer, with a cunning smile.

"Well," replied Giles, with a smile, "I think so, because I can't write."
