POULTRY NOTES

Items That Will Interest Our Readers From Many Sources

Formost among the internal parasites presenting problems to the Maryland poultry raiser are the intestinal worms, of which there are three general types. These three types are the fowl tapeworm, a flat, whitish, segmented worm, the large roundworm, and the small roundworm, both of the latter being round and yellowish white to white in color. All of these worms are found in the small intestine of the fowl, the small roundworm being found in the caeca or blind gut of the small intestine, the others in the main passage of the small intestine.

The Tapeworm is a whitish flat worm, composed of a head and many segments. It is 3 or 4 inches in length in natural position but can be stretched out to two or three times this length. Tapeworms affect practically all classes of poultry and are very common among turkeys in Maryland. Tape worms are more commonly found in Maryland turkeys than the round worms, though both are found.

Each segment of a tape worm has both male and female organs, and develop eggs which pass out into the soil with the droppings to be picked up by other birds.

The large roundworm when mature is about 1½ to 2½ inches long and is found near or in the loop of the small intestine. The small roundworm is so small that it appears very hair-like, seldom if ever reaching one inch in length. The small roundworm is usualy found in the caeca or blind gut of the small intestine, and may in severe infestations be found in the small intestine itself.

Records show that about 40 percent of the poultry marketed in the United States is infested with some kind of intestinal worms. Birds that are well fed and well housed, seldom exhibit any ill-effects, even though infested. strong enough to resist the ravages of the worms through the natural processes of the body.

Adult birds may show signs of infestation and severe losses result where conditions are crowded and insanitary. However, ill effects are most observed in young stock about 10 to 16 weeks of age. Young stock get the infestation from adult fowls or from soil infested by previous flocks with the worms.

Ill results from worms in young stock are most generally precipitated by over crowed houses and yards, the use of contaminated or "chicken sick soil," and in many cases by an unbalanced diet. Any one or all of these factors may serve to precipitate losses due to worms.

Affected stock usually lose flesh rapidly, show shallow bodies, and develop a slim or lowheaded appearance. Appetites continue good and often are ravinous. The color may fade from the head and legs and the bird will assume a generally "dried up unthrifty appearance.

Control of land infestation is of paramount importance for permanent relief from worm infestation. Affected flocks should be given several doses of a reliable vermifuge accompanied by doses of Epsom Salts at the rate of ¼ lb. to each 100 birds about 12-14 weeks old, and ½ lb. per 100 adult fowls. After several doses of vermifuge have been given, care should be taken to clean up and disinfect the droppings. If many worms have been expelled, the stock should be moved to fresh land which has not been previously used by poultry for 3 or 4 years and the old run given a vacation of several ears to starve out the worms. The vermifuge treatment should be continued in mild doses in the new location for a while to make sure the eradication is complete. Some recommend that immovable houses and old yards be treated heavily with a strong brine solution which is said to be quite effective. This treatment, however, will kill all vegetation in the yards.

Many vermifuges are offered on the market, some of which are expensive, and difficult to administer. One of the most practical to administer is the tobacco treatment which is as follows: Mix 2 to 3 pounds of tobacco dust with each 100 lbs. of mash and feed this mixture for three weeks. Discontinue the tobacco for three weeks and then feed for another three weeks. Continue this tratment as long as necessary. Epsom Salts should be given about every 3 or 4 days to keep the birds' digestive tracts in good order. Give birds more room. Feed an abundance of greens and move to a new location after one or two treatments.

Projects for August:
Cull out Molters.
Cull out unthrifty young stock.
Select birds for showing.
Feed carefully.

MILLINGTON

Miss Mary Everett, of Roanoke, Va., is visiting her parents, Mr. and Mrs. George S. Everett near tows.

Miss Elizabeth Mabrey, of Washington, D. C., was the guest this week of her brother, Mr. Russell Mabrey, near town.

The regular monthly meeting of the Woman's Home Missionary Society, of Asbury M. E. Church, will be held next Thursday evening at the home of Mrs. W. H. Minner.

The Sunday School of Holy Cross Chapel held its picnic at Rochester last Thursday.

Little Miss Virginia Vansant, of Wilmington, spent last week with her aunt, Miss Marie Vansant.

Miss Ruby Ahern left on Thursday of last week for Augusta, Georgia, after spending several weeks with her parents, Mr. and Mrs. J. P. Ahern.

Mr. and Mrs. George Slaughter, of Cynnoyd, Pa., were guests last Sunday of his parests, Mr. and Mrs. John Slaughter.

Miss Esther Porter spent the past two weeks with her relatives at Clayton, Del.

Mr. and Mrs. William Cacy, their daughter, and son, of Dumont, N. J., visited his sister, Mrs. R. E. Feddeman, last week.

Mr. and Mrs. Albert Wilds and daughter, Miss Elsie, of Elsmere, Del., spent last week with her parents, Mr. and Mrs. J. C. Vansant.

Mr. Howard West, of Dover, Del., was the guest of his sister, Mrs. J. P. Ahern, os Thursday of last week.

Mr. Frank Slez, Jr., of Wilmington, spent the week-end with his parents, Mr. and Mrs. Frank Slez, near town.

Mrs. James Griffin, of Elkton, visited Mrs. George Jones this week.

Japanese Beetle In Delaware

Following the discovery last week of 40 Jepanese beetles on a truckload of peaches at Milford, which subsequently resulted in an embargo on all peaches in the infested district and territory quaranteed against the Oriental pest and prohibiting the fruit from coming into Delaware without inspection by Federal or State inspectors, a rigid probe to ascertain the status of the Delaware situation was started Monday. To date no Japanese beetles have been discovered in this section.

STILL POND

Mr. and Mrs. Toulson, of Vinland, N. J., spent this week with Susie Toulson.

The monthly business and social meeeting of the Epworth League will meet on Thursday evening, Sept. 3rd. place of meeting will be announced Sunday.

Mr. Thomas Hadaway, of Baltimore is spending some time with Mr. and Mrs. Horace Bramble.

GET AT THE CAUSE

The Advice of a Resident of This Locality Shows a Way.

There's nothing more annoying than kidney weakness or inability to properly control the kidney secretons. Night and day alike, the sufferer is tormented and what with the burning and scalding, the attendant backache, headache and dizziness, life is a burden. Doan's Pills—a stimulent diretic to the kidneys have brought peace and comfort to many Chestertown people. Profit by this Rock Hall resident's experience.

Marion Coleman, plasterer, Rock Hall, Md., says: "My back was lame and achy and when I stooped, knife-like pains cut through my kidneys, and it was all I could do to straighten. It was almost impossible for me to lie in a comfortable position at night. The trouble was caused by the weak condition of my kidneys. At times the secretions passed too freely and again they were scanty and continued mush sediment. Doan's Pills cured me and I haven't had any return of the trouble."
