Do you know why BUICK 4-wheel brakes are mechanical

Buick 4-wheel brakes are built on the same sound *mechanical* principle as the two-wheel brakes you always have used.

The brake on the outside front wheel releases when turning a corner. The outside front wheel needs to turn in a larger circle to avoid skidding *and Buick brakes let it turn.*

And the operating parts of Buick brakes are steel drop forgings.

For safety's sake, and for easier driving, pick Buick and Buick *mechanical* 4-wheel brakes.
