THE NEW FORD CAR

The Following Are Some of the Outstanding Features of the New Ford Car:

BODIES

The bodies of the new Ford are of steel, the only wood used being strips for attaching interior trim, and in the soft roofing of the closed cars. In designing the new Ford car every precaution was taken to prevent squeaks, rattles or drumming sounds. The bodies are built with every feature necessary to eliminate metalic noises. The doors are of heavy construction and welded to give greater strength and rigidity. All body parts that are of steel stamping which might develop noises have reinforcing beads which not only prevent drumming sounds, but also increases strength. In assemblying a boyd, panels and frame sections are welded and riveted together where ever there is a possibility of the body weaving, due to uneven conditions on the road, thus eliminating all chance of metalic squeaks of this nature. In the final assembly of the large units of the body where bolts are necessary strips of antisqueak material are used between the sections. Wherever there are two pieces of metal coming together which might cause squeaks a double ply artifical leather anti squeak tape is put between them. Another feature of the body construction is the insulation of a heavy pad heat insulator on the dash of each car. This pad not only keeps heat from the engine entering the front part of the body, but also serves to quiet noises.

WINDSHIELDS

The windshields of the new Ford cars are of triplex shadow proof glass, and important safety feature. When this glass is broke each small particle of glass adheres firmly to the pyroxlin plastic internal layer with the result that there is no flying glass. This is a highly important safety factor in automobile accidents, a large percentage of injury result from cuts by flying glass, particularly from the windshield. There are also other safety features of this glass. It softens direct sun rays, it breaks headlight glare, it elimnates condensation under windshield of closed cars during winter and is flexible under impact.

There are many more important features of the new Model A car which we will be glad to demonstrate to you if you will give us a call.
