Make It a Fairway for Two

By LEETE STONE

JERRY ENGLISH thought he was going to like it—this new freedom from a daily and yearly job that had come to him with the legacy from an almost mythical California uncle. That was a year ago. His first thought, naturally for Jerry, had been of his frail mother. So he spent a slice of the fifty thousand dollars to buy back the little old New England homestead where she had been born and brought up, for her.

He could not leave her there alone to struggle with a Berkshire winter; and, though he was able enough, he hated to hire the typical, fussy "companion," so they arrived together, and they stayed there together. Jerry, who had spent his spare time writing little stories for several years, now dreamed of writing half the time, and gardening and woodchopping the other half.

His mother basked in the gentle light of her son's affection for the next year. Another autumn had come, with its glorious coloring resplendent and vivid on the hillside back of the tiny farm. With it came to Jerry deep loneliness. He missed the job and the occasional evening at the theater or movie. His mother gave him a very dear companionship; but he longed for that different companionship with his own age. Now that he could well afford it, he mused rather bitterly, he had of his own accord, placed himself in the backwoods, where homes were two miles apart, and callers so few as to give the impression of living in a wilderness.

One morning Jerry rose from his typewriter and looked out of the window behind at the white birch grove and semi-circular driveway that lay in front of the house. This semi-circular driveway of ashes, dirt and gravel, connected on each side, two country roads which reached out in parallel form from the state highway a quarter mile above.

Jerry had the surprise of his life, that moment. Emerging from one country road and turning into his own driveway, he beheld the trim figure of a young woman riding a beautiful sorrel horse. Any equestrienne would have been a marvel; but this was a miracle—the very girl of his dreams.

"She'll go on up to the main road and I'll never see her again," he fumed.

The vision turned into his own semi-circle driveway. But doubt still assailed him. Sometimes casual passers used this as a quick cut-off to the other country road instead of going out to the main highway. She was doing the same, undoubtedly.

Then came his mother's voice from downstairs.

"A young lady to see you, Jerry!"

Jerry could have been bowled over by a feather when that call registered.

"Coming!" he replied.

Jerry hurried down to the big garage door that he kept open during the day. He had forgotten that he was wearing old clothes and with more than a day's stubble on his chin and cheeks, but he remembered these details when he was greeted by the visitor, a lithesome blond who sat cross-legged on the turf; a one-time race horse casually munching the already frost-bitten grass.

"Your name's Jerry English," she said, amazingly. "Mine's Jane Duganne. I heard at the village store of you. They say you write. I just got home the other day from a year abroad at school. I'm lonely. What I heard about you sounds as if you were an interesting person. Will you play a round of golf with me this afternoon?"

Jerry but managed a reply, of sorts. "Holy Gee!" he said boyishly, "but you're a good sport. Say, I didn't know there was a golf course within 50 miles."

"Ten miles—a nine-hole beauty—at Emsden," she replied.

That was how it all started. They played golf every afternoon for a week. Jane usually beat Jerry by several strokes because she had taken lessons from a professional. But Jerry kept creeping up with just one idea in his consciousness—to beat Jane decisively before the season ended.

It became an obsession, almost, for upon that victory depended his future, Jerry thought.

The day finally arrived.

"Don't you think you're the glamorous golf idol, now that you've beaten me?" Jane inquired.

"I'd—I'd like to play around again. And I'd like to have you think of the last fairway as a fairway for two. D'you mind?"

Jane looked straight into his eyes and then dimpled.

"Let's slip over to this clump of pines, rest a while and talk it over," she replied.

Pennsylvania's Land Deal

Pennsylvania had at first but four miles of territory on Lake Erie. This was at the western end of the county and adjoined the state of Ohio. There was much trouble concerning that portion of Erie county known as the triangle, until finally the claims of the Six Nations, Massachusetts and New York became merged in the United States. In March, 1792, Pennsylvania bought the triangle for about $150,000. This gave her nearly 50 miles of frontage on the lake and more than 200,000 acres of additional land.

PAIN

HEADACHES
NEURITIS
NEURALGIA, COLDS

Whenever you have some nagging ache or pain, take some tablets of Bayer Aspirin. Relief is immediate!

There's scarcely ever an ache or pain that Bayer Aspirin won't relieve—and never a time when you can't take it.

The tablets with the Bayer cross are always safe. They will not depress the heart, or otherwise harm you. Use them as often as they can spare you any pain or discomfort. Just be sure to buy the genuine. Examine the box. Beware of imitations.

Aspirin is the trade-mark of Bayer manufacture of monoaceticacidester of salicylicacid.

BENJAMIN FRANKLIN

ONE OF AMERICA'S GREATEST SONS

On January 17th occurs the 226th anniversary of a great American who should not be forgotten amid the nation's tribute to George Washington this year; for this noted American was not only a glory to our history but without him Washington might not have been able to achieve our independence.

This great American was Benjamin Franklin, who became, next to George Washington, the best known American of the 18th Century. Wherever enlightened men gathered during Franklin's lifetime, they accounted him foremost in philosophy, politics, and diplomacy, and to this day his name is secure in history as that of a pioneer in science.

Franklin was one of the most versatile men of our history. His clear thinking and good common sense won him fame everywhere. As for his winning personality, it proved a tremendous asset to the American cause. The final victories of Washington on the battlefield would never have been possible but for Franklin's skill in the field of diplomacy and his ultimate winning of the French nation to America's side.

Benjamin Franklin was born in Boston, on January 17, 1706, the United States George Washington Bicentennial Commission reminds us. His father wanted him to learn the trade of candle-making, an occupation that he disliked so much that he threatened to revolt. To forestall his running away to sea, the boy Franklin was apprenticed to his half-brother, James, a printer; and here Franklin's rapid self-education got its start. In his brother's shop he met intelligent people, he eagerly read the best books, and he soon tried his hand at writing for his brother's newspaper, called the "first sensational sheet in America."

Quarreling with his brother, Franklin set out for Philadelphia at the age of 17, to make his own way. There he soon caught the attention of Governor Keith at whose suggestion he went to London. There, in spite of many hardships, he soon obtained employment and his agreeable personality brought him many influential friends. One of them, a Quaker merchant named Denham, offered Franklin a job in a store that he planned to open in Philadelphia. With a short time Denham died and Franklin again was without a job, but his next step was important.

With Hugh Meredith he established a printing shop in Philadelphia and in ten years ha had made it the most important business of its kind in the country. Next he bought the Pennsylvania Gazete, which soon gained a circulation of 10,000 and became one of the outstanding papers of the time. In this paper he began those pithy maxims to be gathered under the title of "Poor Richard's Almanac," which lives today in lasting fame.

Meanwhile Franklin's interest and activities had broadened in every direction. He founded the American Philosophical Society, organized the first fire company in Philadelphia, and became the city's postmaster and clerk of the Pennsylvania Assembly. His interest in science also developed, and he invented a stove and began those experiments in electricity which have made his name a household word in the scientific world.

Every schoolboy knows the story of Franklin's suspicion that the lightningbolt was simply a larger specimen of the spark he drew from a Leyden jar. He proved the likeness with his historic experiment of the kite and the key during a thunder-storm. The invention of the lightning-rod soon followed.

Franklin's diplomatic feats make too long a list for a newspaper column, but it was he who first sought to bind the Colonies together in union. He performed many saving services for the Colonies before the Revolution, and during that strugle his influence in France provided the factor that turned the Revolution to victory for America.

Even at 81, Franklin's deeds for his country were not yet ended, for in 1787 he performed the culminating service of his long and great career with the fitting act of becoming a member of the Convention that wrote the Constitution.

Throuhout his life he was a devoted admirer of George Washington, and the friendship of these two men is one of the fairest pages in early American history. On his death, on April 17, 1790, Franklin willed his cane to Washington, with the famous words: "My fine crab-tree walking stick, with a gold head curiously wrought in the form of a cap liberty, I give to my friend and the friend of mankind, General Washington. If it were a sceptre, he has merited it and would become it."

NEEDED HELP THEN

Dusky Ike: "Please, sir, I've a sick wife—could you help me out?"

Business Man: "I can give you a job next week."

Dusky Ike: "Too late! She'll be able to go to work herself by then."

POOR BURGLAR

"Just think! While I was out with some of the fellows the other night, a burglar broke into our house."

"DDid he get anything?"

"I'll say he did! my wife thought it was me coming home."

Materials Evolved by Acids Drawn From Air

Silk stockings have actually been made from air! They look very well indeed, but they have one drawback: they melt in hot weather. Still, that is a disadvantage which will doubtless be overcome in time, for the science of making silk from air is still in its infancy.

Wonderful work has been done by Mr. Wallace Carothers, who has discovered that about twenty substances can be extracted from the air, each of which can be turned into a material very like floss silk in appearance. A synthetic cloth has even been evolved by treating various acids drawn from the air with a waste product of ordinary petrol.

Air plays a very important part, for we could not live for an instant without it. In the future, though, it is likely to provide us with a good many other things beside breath. Saltpeter, one of the most valuable fertilizers known, is already manufactured from air, and the neon gas used for filling certain kinds of electric lamp bulbs can be obtained in the same way. Not long ago, a method of extracting carbon from air was discovered, and it was predicted that from this might develop methods of obtaining both fuel and food from the atmosphere.—London Tit-Bits.

Phonograph Not Direct Idea in Edison's Mind

Edison admitted he was working on another subject when he stumbled on to the principle which made the phonograph possible. He said, "I was engaged upon a machine intended to repeat Morse characters which were recorded on paper by indications that transferred their message to another circuit automatically when passed under a tracing point connected with the circuit-closing apparatus. In manipulating this machine I found that when the cylinder carrying the indented paper was turned with great swiftness it gave off a humming noise from the indentations, resembling that of human talk heard indistinctly. This led me to try fitting a diaphragm to the machine which would receive the sound waves made by my voice when I talked to it, and register them upon an impressible material placed on the cylinder. I saw at once that the problem of registering the human speech so that it would be repeated by mechanical means as often as might be desired was solved." — Washington Star.

Early Motion Pictures

The modern motion picture dates from about the year 1893, when Edison produced his kinetoscope, the first machine of the kind using film. Edward Muybridge, often called the "father of moving pictures," had preceded him by about 20 years, but was handicapped by the fact that he had to use glass plates. Other pioneers before Edison were Sellers, Lincoln, Marey, etc. In 1894 C. Francis Jenkins was the first to produce moving pictures by modern methods. The first public showing of moving pictures was made in June, 1894.

Island of Human Woe

The Indian name for Blackwell's island was Minnahannock, meaning "long island." In 1664 the island was granted to Capt. John Manning, and was known as Manning's island. His stepdaughter, who inherited it, married Robert Blackwell, for whom it was then named. In 1828 the city of New York bought it for $50,000. Recently the name has been changed to Welfare island. It now contains the Metropolitan hospital, home for the aged, the workhouse and the penitentiary.

Wanted Movies

Nobody knows where she got her pass to the symphony concert at Severance hall, or why she thought of crashing the portals of that dignified concert hall.

She was obviously not the symphony type. She sat and squirmed throughout the first part of the program, looking very bored and very puzzled. At the intermission she left her seat and went in search of an usher.

"Say," she demanded, "when do the movies start?"—Cleveland Plain Dealer.

Tabloid

A tabloid newspaper is one that expresses the news briefly. It is usually of smaller size than the ordinary newspaper because the news has been condensed. The firm of Burroughs, Wellcome & Co., London, England, coined the word and applied it to a preparation of drugs in a concentrated and condensed form. Although the term is a copyrighted trade mark of that firm, it is now widely used with reference to anything concise or condensed, especially newspapers that summarize or condense the news.

Liquid Long Preserved

Liquid, at least 1,000,000 years old, is contained in a sealed cavity in the center of a beautiful crystal of a mineral known as calcite, recently acquired by the Acadamy of Natural Sciences at Philadelphia. The cavity contains one-half gill of what is believed to be water with some minerals in solution. The crystal came from lead mines near Rossie, N. Y. Bubbles and small drops of liquid have been found in crystals previously, but not in such a large quantity.—Popular Mechanics Magazine.

Odd Boundary Line

The irregular section in the boundary between Massachusetts and Connecticut, known as the "Southwick Jog," was caused by the straightening out and adjusting of errors in the boundary line between Connecticut and Massachusetts as previously run by compass. A long narrow strip of land was given to Connecticut, and the Southwick jog ceded to Massachusetts as a parcel of land of equivalent area.

WHEN FOOD SOURS

ABOUT two hours after eating, many people suffer from sour stomachs. They call it indigestion. It means that the stomach nerves have been overstimulated. There is excess acid. The way to correct it is with an alkali, which neutralizes many times its volume in acid.

The right way is Phillips Milk of Magnesia—just a teaspoonful in water. It is pleasant, efficient and harmless.

It is the quick method. Results come almost instantly. It is the approved method. You will never use another when you know.

Be sure to get the genuine Phillips Milk of Magnesia, the kind physicians prescribe to correct excess acids. 25c and 50c a bottle—any drugstore.

"Milk of Magnesia" has been the U. S. Registered Trade Mark of The Charles H. Phillips Chemical Company and its predecessor Charles H. Phillips since 1875.

NOTICE TO CREDITORS

NOTICE is hereby given that the undersigned has obtained from the Orphans' Court for Kent County letters of Administration on the personal estate of
