GIRLS 4-H CLUB WORK

Girls of Kennedyville and vicinity met at the home of Catherine and Mary Tucker Lusby's and organized a 4-H Club. The following officers were elected, President, Audry Long; Vice President, Anna Oliffe; Secretary, Grace Willis; local leaders, Rebecca Groves and Audry Long. Other members are: Erma Long, Virginia and Mary Atwell, Dorothy and Mary Eva George, Virginia Primrose and Betty Scotten, Marie and Anna Miller.

The Program Committee consists of Marie Miller, Dorothy George and Virginia Atwell. They met at Audrey Long's last Friday and arranged the Program for this Year. The project decided upon was clothing.

The Girls, 4-H Club Camp will be held September 16, 17, 18 Friday evening inclusive, at Edmonston shore. The local leaders of the several 4-H Clubs have the details.

Flower Show

There will be a meeting, Wednesday, August 31st at 2.00 p. m. at the Court House Chestertown, of the Exhibit Committee of the Flower Show of which Mrs. T. H. M. Bramble of Fairlee is chairman.

The time and thought Mrs. Bramble has spent in forming this committee has been considerable.

Women's Clubs

The Flatland Women's Club will meet at Mrs. George Yost's, Septemher 1st, at 11 a. m. to 3 p. m.

$1,019,570 FOR MARYLAND ROADS

KENT'S SHARE TO BE $29,261.65

Maryland's twenty-three counties have been advised of the amounts of money apportioned to them for road building under the Federal emergency relief and construction act. Montgomery County's share is $56,790.05. The total amount allotted to the State of Maryland is $1,019,570. In making the announcement of the amount of money each county will receive, the State Roads Commission also has asked the County Commissioners to recommend section of roads which may be constructed with the Government funds.

Some recommendations have already been received and the commission is studying them. It is the wish of the roads commission that the new roads be built in sections of the counties where they are most needed and where the work wil igive employment to the greatest number of men. The commission is working along these lines.

The total of $1,019,570 which comes to Maryland under the Federal act has been accepted by the State officials for expenditure before July 1, 1933. The money has been divided among the counties on a pro-rata milage basis, as follows:

County	Amount
Allegany	$38,335.83
Anne Arundel	39,355.40
Baltimore	86,153.67
Calvert	15,497.46
Caroline	36,602.56
Carroll	66,374.01
Cecil	44,453.25
Charles	37,520.18
Dorchester	41,904.33
Frederick	85,032.14
Garrett	53,935.25
Harford	54,750.91
Howard	29,363.62
KENT	29,261.65
Montgomery	56,790.05
Prince George's	49,755.02
Queen Anne's	36,092.78
St. Mary's	31,504.71
Somerset	28,814.69
Talbot	23,348.15
Washington	53,872.44
Wicomico	41,088.67
Worcester	39,763.23

A letter notifying the various boards of County Commissioners of the availability of the money and is allotment reads as follows:

The Federal emergency relief and construction act of July 21, 1932, allocates to Maryland for highway purposes the sum of $1,019,570 to be spent before July 1, 1933.

Under present conditions the commission regards the acceptance of this Feeral appropriation as beneficial to the State and has decided to accept this loan. The act provides that the loan wil be repaid to the Federal Treasury by deductions from future Federal aid allotments beginning in 1938.

We have apportioned this money to the several counties on a mileage basis which means that $—— will become available at once for expenditure on road construction in your county.

Will you please submit in writing your recommendatons, in preferential order, for additional road construction so as to utilize this amount of money with the undertsanding that any roads to be built as part of this program mus have the approval of the Federal Government.

Harry D. Williar, Jr., chief engineer of the State Roads Commission, has completed a study of the bill as passed by Congress and has forwarded to Washington a communication describing the conditions peculiar to Maryland and explaining his plans for handling the relief work. Approval of Mr. Williar's plans are expected shortly from Washington. It is the plan of the roads commission, in cooperation with the various county road staffs, to begin the new construcion work as soon as possible.

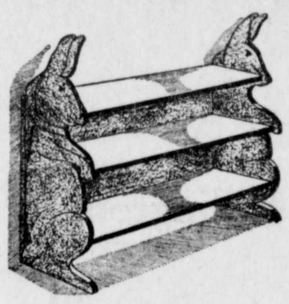

There are certain regulations regarding the method of construction, among which is the maximum amount of hand labor.

DOROTHY DARNIT

By Charles McManus

How to Make It

A SET of shelves with ends cut out to represent animals provides an interesting piece for the child's room and encourages the child to keep his books and other things in order. It is easily made by anyone handy with a saw and hammer.

First trace the animal—in this case a bunny—on paper and cut to the desired shape. To prevent gluing two or more widths together for the end pieces, use pressed wood which may be obtained in sheets from your lumber dealer. Trace the paper pattern on the pressed wood and cut out with a scroll saw. The same material may be used for the shelves which may be of any desired length. Narrow strips of pressed wood or pieces of quarter-round may be used to support the shelves. These should be screwed to both the end pieces and to the shelves. A single piece of pressed wood will provide a back.

Paint the shelves any desired color. Touch up the eyes, ears, collar, etc., with a small brush, using a contrasting color.

OH DEAH!

Enthusiastic Agent: "Now here is a house without a flaw!"

Customer: "My gosh, what do you walk on?"

AGRICULTURAL NOTES

(BY COUNTY AGENT McVEAN)

CONTROL SMUT IN WHEAT AND BARLEY

Covered Smut in wheat and barley may be controlled very effectively by treating the seed. This disease causes enormous losses due to reduced sales price, yields, and feeding value.

Use good quality seed grain (practically free of smut) treated as an insurance against losses from this source. During present conditions, it is especially important that every precaution and safe-guard be employed in order that the yield and quality of crops be high and the work be as efficient as possible. Poor quality seed, untreated, invited poor results and lessens chance f profitable production.

Coper Carbonate dust has been used very effectively in the control of smut in wheat. Mercury dusts are also effective but require greater care and precaution in their use, due to their poisonous nature. For use in treating barley either suitable mercury dust or Formaldehyde dust are most effective, ranking ahead of the copper dust. The mercury dust is effective in the control of "barley stripe diseases."

It is sound economy to insure quality and quantity of these small grains b treating good seed f approved varieties with the rotective dusts.

Drought Delays Alfalfa Seeding

Under normal moisure conditions, the best time to seed alfalfa is from August 15th to September 15th. The present dry spell has prevented the preparation of suitable seed bed. Unless the alfalfa land has been plowed and tilled to a fine firm seed bed and unless sufficient moisture is available it will be wel to postpone seedng until such conditions exist. Alalfa requires lime, therefore have the County Agent test the soil to make sure that lime is supplied if needed. It may save you money, especially if your soil does not need lime or it may prevent the application of amounts in excess of need. Likwise use innoculation on the seed unless the land has recently grown successfully either alfalfa or sweet clover. Innoculation is cheap insurance when all other factors are satisfactory.

Report Sick Hogs

Cholera season is here. Hogs are too valuable to loose with cholera, especially when the disease may be prevented by sanitation and innoculation with the anti-hog cholera serum. As a means of saving hogs, money and loss make sure you report any cases of sick hogs to the County Agent. The hog cholera Veterinarian will visit you and check on hog ills. If cholera is present you may thus learn of it and save many pigs and hogs from taking the disease. Serum treatment is relatively cheap and is effective.

Jersey Cattle Field Day

The Jersey fans of the Eastern Shore are to hold a Show, Judging Contest and Field Day on Thursday, September 1st at Rich Neck Farm, Claiborne, Talbot County.

Guernseys At Raskob's

A similar Field Day will be held on Friday, September 2nd at Pioneer Point Farm near Centerville. Cattle from both these shows will be moved to the big Timonium Show held as a part of the State and Baltimore County Fair.

Destroy Peach Tree Borer

Owners of peach trees will be treating the trees to destroy peach tree borers The most simple and effective means of control is "P. D." Benzene (short for Paradichlorobenzene) which white granula substance forms a heavy gas and kills the borers when properly applied.

Only trees over three years of age may be treated safely. No tree injury results on five or six year old trees if applied when soil is warm.

In treating, clear away weeds, grass or refuse round base of tree to a distance of one (1) foot, smooth the soil, but do not dig up or loosen the crust. Remove surplus gum. Use three-quarters (3-4) to one (1) ounce distribute it in a circle around the base of the tree at least two (2) inches away from the tree. A paper come is convenient to use in distributing. Use loose dirt to form a mound three to five inches deep over the "P. D. Benzene" and up the tree trunk. Pack with hoe or shovel. Remove the mound after several weeks if desirable. On young trees three to five years of age remove mound after seven to 12 days.

Silo Saves All The Corn

Inexpensive Types May Be Used—Harvesting Costs May Be Cut.

As corn cutting season approaches and as the drought is burning the foliage and decreasing the quality and quantity of grain, thought of how best to utilize this crop at least expense will be common.

The silo as a best means of utilizing a portion of the crop is appreciated and for those without a silo the use of a pi, trench, or temporary wooden silo is recommended.

The expense of any of these types is little. The County Agent stands ready to assist any who desire to use any of these types.

To those who have no use for all the corn fodder, the practice of picking or harvesting only the ears is a labor and expense saving plan. Cattle may ten be turned in to glean the edible foliage, leaving the stalk to plow down as a means of increasing the organic content of the soil.

To those with hogs to be fattened and who can spare a portion of the fodder, "hogging down" corn is good practice to apply to a small acreage.

The above suggestions are directed only to those who have hay and straw in abundance and therefore do not need to conserve corn fodder for either or both purposes. Cutting the harvesting expenses is the best way to increase the return from the corn crop.

Fall and Winter Gardens Seasonable

To those who practice the "live at home" idea as a means of solving the economic problems, attention to planting crops for fall and winter garden is now seasonable. To those who want them the following crops may well be planted (as soon as moisture in the soil is available) lettuce, spinach, carrots, kale, collards, turnips, cabbage and even beets may be planted. The family garden is a great factor in economical living.

Sow Small Grain For Fall And Winter Pasture

Now is the time to get ready for fall and winter pasture. Use wheat, rye or barley which ever is on hand. Sow at once or when moisture conditions permit. Hessian Fly will not bother pastured grain. They may bother adjacent grain next spring to some extent. Early seeding gives growth for fall pasture.

Winter Oats Do Well

Farmers who want to get good results with oats should try winter oats. The "Winter Turf" oats has given best results at the Experiment Station. Most farmers in this county get their spring oats in too late—many use a late maturing variety. Sixty day oats produce less stray but more and better grain than do the large late maturing western feed oats.

Free Shep Of Parasites

Now is good time, while weather is still warm, to rid sheep of both external and internal parasites. Dip sheep for ticks, mange, itch, scab, etc. Treat for worms and internal parasites using bluestone (copper sulphate) solution and nicotine. The County Agent will supply directions.

Soybeans For Protein

The acreage of soybeans in Kent County is estimated at twice the acreage of former years. They are our best temorary legume hay. The bean seed or grain is highly nutritious. Crushed soybeans are an excellent source of protein to use to build up or supplement other farm produced grains. Caution should be used however, due to the high oil content of the beans. They have been used most successfully in Kent by a number of farmers in mixture of corn and wheat or barley and oats, not to exceed 16 per cent. protein mixture when fed with alfalfa or clover hay and silage or corn fodder. The County Agent will aid any farmer in computing the mixture to make best use of his available grains and roughages.

Wake Up Your Liver Bile —Without Calomel

And You'll Jump Out of Bed in the Morning Rarin' to Go

If you feel sour and sunk and the world looks punk, don't swallow a lot of salts, mineral water, oil, laxative candy or chewing gum and expect them to make you suddenly sweet and buoyant and full of sunshine.

For they can't do it. They only move the bowels and a mere movement doesn't get at the cause. The reason for your down-and-out feeling is your liver. It should pour out two pounds of liquid bile into your bowels daily.

If this bile is not flowing freely, your food doesn't digest. It just decays in the bowels. Gas bloats up your stomach. You have a thick, bad taste and your breath is foul, skin often breaks out in blemishes. Your head aches and you feel down and out. Your whole system is poisoned.

It takes those good old CARTER'S LITTLE LIVER PILLS to get these two pounds of bile flowing freely and make you feel "up and up." They contain wonderful, harmless, gentle vegetable extracts, amazing when it comes to making the bile flow freely.

But don't ask for liver pills. Ask for Carter's Little Liver Pills. Look for the name Carter's Little Liver Pills on the red label. Resent a substitute. 25c at all stores. © 1931, C. M. Co.

SHOPPING JEFFERSONS'

Well, dears, this is rather a solemn time. August is about to depart, September edges in, Winter is around the corner, Spring will soon be here! Hey there. How did I get into Spring so soon? Let's see, where was I? Oh yes, the end of Summer.

As a matter of fact, however from now on for a couple of months is the grandest time of the year. There's something exciting about Fall, the things you do, the clothes you wear. Ever notice it? And, Caesar's ghost! What clothes straight from the seventh heaven they have concocted this year Those trim, thin woolens, the spongy crinkly wool crepes. Boy, they're GOOD.

And from there to Jeffersons. I am still all jittery over the new woolen frocks just arrived. The glowing jewel colors, ruby and emerald and saphire, or "Repeal" shades they call 'em in New York "Port Wine," "Absinthe," ..Sherry," and so forth. See, I told you they were exciting. Simply goes to your head.

And each dress is a darn good job of designing, cutting, fitting and finishing, with accents of handwork, collars, belts and buttons that are perfect. How in the world they can turn out a job like that for $5.75 I can't see. They're going fast but more are expected in a day or so. Hot foot it, ladies, and see what's what.

And—new shoes coming in! A great secret Nobody's seen 'em but we hear they're setting the world on fire. Be here by Saturday.

Now a couple of quick ones. All sheer materials are now 19c a yard. Those good white slips with the trick bias cut are only $1.50. A few beige slippers at $1.98 left.

And here's the end of the page.

LYDIA LEE.

Lessening Sadness

Is the First Duty of the Funeral Director

My excellent system of arranging the details or each and every funeral entrusted to my care leaves with those upon whom I wait, a feeling of confidence and satisfaction that the last offices were performed with such perfect harmony as to greatly lessen the sadness connected with such an event
