Barred Rock Cockrel—First, Bill Comella; Second, Edgar Hodgson; Third, Bill Comella.

Rhode Island Red Pullets—First and Second, Edgar Hodgson.

White Pekin Ducks—First, Edgar Hodgson; Second, Emily Sutton.

The Curbstone Diplomat

WILLIAM S. COLLINS

Col. I. Price Ewing has made a chart of the Kent Island Narrows. The chart shows all the new buoys and is believed to be the only one that has been made. Several blue-prints have been made from the original and are being distributed around. One has come this way and I hope it is here for keeps as it is a valuable aid for boatmen in going through the narrows. Col. Ewing has taken a great deal of pains in the making of the chart and every detail is covered. Those using the chart will appreciate the Colonel's work.

Moratoriums seem to be the rage of the hour. Hoover is claiming the credit for starting this latest fad but Chestertown business men started this a long time ago and with their own business, not everbyody elses.

This moratorium idea works out all right though Hoover promised us continued prosperity, two cars for every garage, full dinner pail, etc., when he ran for president in 1928. He was the greatest thing that came along since Lindbergh and was not even overshadowed by the famous Ywell Lee.

It seems a shame that a man could be so whooed up four years ago and have so much fun made of him today.

If your dinner pail is empty and your garage contains one piece of junk, just remember that a moritorium is on the 1928 promises.

Don't be old fashioned remembering 1928 promises, and thinking about low cost of farm products and how you are going to pay your taxes. Be up-to-date, join the style and get moratorium minded, "Don't do today what you can put off until tomorrow." Some of the poor use the moratorium on eating. Be careful your neighbor does not out do you. Show him the style with the moritorium spirit.

There is one thing that Hoover can justly be blamed for though and that is doing away with the free tickets to heaven in this next election. Many voters have been getting these tickets by voting dry and now that Hoover has broken the shackles and taken a swan dive into the pond without a bathing suit, there is nobody left to hand out the tickets. The short cut to heaven has been blocked and to get there now we will have to follow the old straight and narrow way. There ain't no justice.

Getting back to moratoriums, even the most hopeful seem to think a moritorium is going to be put on the enlarging of the High School.

A moratorium seems to have been put on the famous Lee case; too bad it could not have been put on the Maryland Free State's latest plan of selecting juries.

It looks as though a long time moritorium has been put on the building of disposal plant in Chestertown. The best thing to do now is stop apologizing for the river and brag about the attractive cess pool we have. Sure we can make it sound fine, The Chester River Yacht and Country Club entertained visiting Yachtsmen at its third annual regatta in the Chestertown cess pool noted for its pretty banks which are supervised by the Chamber of Commerce. Among sports engaged in were sail-boat racing, motor boat racing and swimming. All reported having a fine time.

And some people would like to put a life time moritorium on the carnival as they fear it will corrupt the morals of the community. This will only last a little over a week and then the sanctified air can prevail again.

Lastly it is just too bad we can not cal a moratorium on give old nd th trees decaying in the park so the Rotary boys would not have to cough up.

Schools opened Friday and it looks like a lot of the pupils put a moritorium on starting and are waiting for next week to roll around.

DEATHS

Mrs. Ida Moore McDade, of Betterton, passed away at Cambridge, Md., Sunday afternoon in her 67th year. Funeral service was held at the home of her brother. Capt. George Moore, of Betterton, Tuesday afternoon, Rev. Thomas Price officiating; Interment Still Pond cemetery. B. R. Fellows, undertaker. The pall bearers were: Messrs. Ray and Horton Silcox, Harvey, Littleton and Carlton Moore and Elwood Bramble.

John P. Monyham, of Broadneck, died at Easton hospital on Friday of last week following a lingering illness, aged 61 years. He was born in Baltimore and came to Kent county as a young man where he has been engaged in farming.

He is survived by his widow who was formerly Miss Bigg, of Kent county. Three children also survive him.

Funeral services were held at Chester cemetery on Sunday at 3 p. m. Rev. Frank White officiating. W. T. Hicks undertaker.

STILL POND

Mr. and Mrs. Calvin Coleman, of Baltimore, Md., last week end with Mr. and Mrs. John Boulden.

Mrs. Ella Pennington has returned home after spending the summer at Camp in Brackney, Pa.

Little Miss Earnesine Matthews, of Baltimore, Md., has been spending some time with her grandmother, Mrs. S. W. Matthews.

AGRICULTURAL

BY COUNTY AGENT McVEAN

POULTRY PARASITES LOWER PRODUCTION

Now is a good time to make sure that the birds to be wintered are free of external and internal parasites. Lice and mites can be readily controlled. Worms of various kinds can be largely destroyed by means of nicotine and kamala. Either type of parasite is an expensive luxury for the flock owner. Little things cause big leaks. Stop the leaks early give the birds a normal chance to make profitable production.

CULLING PAYS

Constant culling of the poultry flock pays at any time. Under present conditions it is more important than usual to weed out the low producers and non-producing birds. The culling can be done quite effectively at night when the birds are on the roost. Cull closely the pullet flock—removing the birds which show that they are off type—lacking in vigor and of low production type.

SOYBEANS IN DAIRY MIXTURE

Doubtless many soybeans will be crushed this fall and winter to mix with farm grown grains as a dairy cow ration. Soybeans are anexcellent source of protein. Care should be used in feeding thm, however, as the oil content of crushed beans may cause digestive troubles if fed in amounts greater than will give a 16 per cent protein mixture. The County Agent will aid any who desire to make best use of the available farm crops in dairy cow rations. The good cow furnishes a better market for farm crops than does the cash market. "Live at home is a good practice now.

WEEVIL NOT ATTACK TREATED SEED

Farmers who have seed grain free of weevil have an added incentive in treating seed grain for [illegible] Covered Smut, in that the We[illegible] not attack the treated grain nearly so readily as untreated seed.

The cost of treating seed grain is so little compared with the effect of the treatment on both quality and yield of wheat or barley that no argument is necessary to convince any thinking farmer of the sound economy to treating seed wheat and barley to prevent Covered Smut. Smut infested grain should not be used for seed. Treating badly infested grain cannot be 100 per cent. effective. It pays to use good seed.

FERTILIZE SMALL GRAIN AFTER SOYBEANS

Occasionally you hear of cases of poor crops following soybeans. (However the average yield of crops following soybeans is greater than following other crops.) There are several factors which influence the small grains in such cases. One is the possibility of a cloddy, poorly prepared seed bed which reduces the rise of moisture to the seed or young grain plants. A second factor is the use by the beans of the phosphoric acid and potash supply. A third factor which applies in some cases, especially when a short time elapses between harvesting of the bean crop and the seeding of the small grain. Scientists reveal the fact that during the period the roots and crop residue of the soybean crop are decomposing, the nitrogen which should be available to give the small grains a good start is locked up by the bacteria and the fungi which bring about the decomposition. In such cases the small grains get a poor start due to lack of available nitrogen.

The use of 200 to 250 lb. per acre of a complete fertilizer (as 2-8-5 goods) is therefore a wise precaution for small grains following soybeans, especially if the beans are late or they are allowed to mature for seed. The locked up nitrogen becomes available as soon as the decomposition is complete.
