Wake Up Your Liver Bile —Without Calomel

And You'll Jump Out of Bed in the Morning Rarin' to Go

If you feel sour and sunk and the world looks punk, don't swallow a lot of salts, mineral water, oil, laxative candy or chewing gum and expect them to make you suddenly sweet and buoyant and full of sunshine.

For they can't do it. They only move the bowels and a mere movement doesn't get at the cause. The reason for your down-and-out feeling is your liver. It should pour out two pounds of liquid bile into your bowels daily.

If this bile is not flowing freely, your food doesn't digest. It just decays in the bowels. Gas bloats up your stomach. You have a thick, bad taste and your breath is foul, skin often breaks out in blemishes. Your head aches and you feel down and out. Your whole system is poisoned.

It takes those good, old CARTER'S LITTLE LIVER PILLS to get these two pounds of bile flowing freely and make you feel "up and up." They contain wonderful, harmless, gentle vegetable extracts, amazing when it comes to making the bile flow freely.

But don't ask for liver pills. Ask for Carter's Little Liver Pills. Look for the name Carter's Little Liver Pills on the red label. Resent a substitute. 25¢ at drug stores. ©1931 C. M. Co.

OCTOBER HEALTH REPORT

TUBERCULOSIS SERIOUS MENACE IN KENT COUNTY

During the month three cases of typhoid fever were reported in the county. Two were reported from among the temporary employees who came over from Baltimore to work in one of the caneries. The source of these two cases was not definitely fixed although it was thought they developed the disease in Baltimore city. The third case was reported in the upper part of the county. An investigation revealed that this case contracted the disease in all probability through the supply of drinking water. The patient was removed to the hospital, the water supply condemned as unsuitable for drinking purposes and the remainder of the inmates in the home were giving typhoid vaccine.

Other communicable diseases include two cases of chicken pox, one pneumonia, and one of erysipelas. There were six tuberculosis cases reported, one of which was diagnosed at the clinic and the remainder by private physicians. Three cases of social disease were reported.

This section of the state continues to have a high tuberculosis death rate and the home care, hospitalization and transporting of these cases to the sanatoria constitutes a real problem. The annual sale of the tuberculosis seals at Christmas time go towards combating this disease so that it cannot be spread to others. Such cases are visited periodically by the nurses and are supplied with sputum cups and disinfectant. Cases that remain at home are especially instructed on the spread of disease to others in the family. A clinic is held every other month free of charge and an effort is made to have those in the incipent stages of disease examined free as recovering from tuberculosis depends largely on the stages to which it has advanced.

Diphtheria Prevention

Each year with the opening of school a series of toxoid administration clinics are held in the schools of the county. This work has been going on in Kent County for the past ten years and a very high percentage of children are protected against diphtheria. This is attested by the fact that there has been no child die of this disease in Kent county since 1926. However encouraging this report is for Kent county there still remains the fact that during 1932 five thousand children, mostly under five years of age, died from this disease in the United States. These deaths occurred largely in areas where the administration of toxin-antitoxin or toxoid has not been carried out.

Other Activities

Dr. E. P. H. Harrison, Jr., of the Johns Hopkins staff and Doctors F. B. Hines and F. W. Smith held the monthly pre-natal clinic at the health center on October 12th. Seven cases were examined and two were advised to have special treatment and be removed to the hospital for delivery.

A tuberculosis clinic was held by Dr. S. H. Hurdle on Oct. 2nd and five patients were examined. One of these cases was diagnosed as positive and was sent to the State Sanatorium at Sabillasville for treatment.

Dr. F. A. Holden held four Eye, Ear, Nose and Throat Clinics where thirty-seven patients were treated. This is not a free clinic and only patients are treated free who are certified to by the nurses as being unable to pay. In several instances it was necessary to furnish glasses free to children whose parents were unable to pay. Such glasses were paid for by the Red Cross.

Dr. H. G. Simpers held four Venereal Clinics in the Health Center. Seventeen Wassermanns were taken, ten were negative, seven were positive. One new case was reported through this clinic. One hundred and one treatments were given.

Miss Beckham, one of the nurses, began preparations for a class in the high school on "Home Hygiene and Care of the Sick."

A number of midwives were visited by the nurses and their equipment inspected. All registrations of births are delivered to the parents by the nurses at which time instructions are given when requested by the family physician on the care of the infant.

The Health Department continues to be called on for transportation and hospitalization of a large number of individuals who are indigent and who are unable to obtain this service. Arrangements were made for ten cases to enter various institutions and hospitals in the state. The following are cases sent to hospitals:
