There is a cause back of every accident. By anticipating causes, accidents can be prevented. Throughout your daily routine of chores and machine operation, keep alert to recognize hazards, and then prevent accidents by removing the hazards. Eternal vigilance is the price of safety.

It is a wise use of family income in a period of rising prices to cut down as much as possible in the amount of goods purchased instead of buying the same amounts with an ever-increasing outlay of money.

Good Fresh Firewood

Some kinds of trees make good fuelwood even when freshly cut, because they contain little water. Among these are black locust, shagbark hickory, white ash, American beech, and red pine.

Breaking In Paint Brushes

To insure their longer life, new paint brushes should be broken in carefully before they are used. One of the best ways is to soak the brush in raw linseed oil for several days. Then dip it into the painting material you intend to use and draw it across a rough, unplaned board several times. This will remove any loose bristles that were not securely fastened during the manufacturing process. If the brush is put in paint before being soaked in oil, the porous bristles will absorb pigment, causing them to stiffen and lose their flexibility.
