Farmer's Newest Back-Saver

The self-lifting tractor is now a reality. It rises any height, up to four inches, virtually drawing itself up "by its own bootstraps." The lifting operation is accomplished by placing light tubular frames beneath the axles, connecting the rear to the two arms of a Ford-Ferguson tractor's hydraulic linkage and lightly touching the "finger-tip control" lever which is one feature of the Ferguson System. The entire operation takes less than one minute.
