

Baltimore, Md., September 21st 1881, who state - complains of pains all over body with weakness, which is more due to old age (60) than Typhoid fever. There is no evidence in the case that can be accepted to establish the fact that the alleged weakness of head and back, or disease of head and back is the result of typhoid fever for which he was treated in April 1864.

There is no medical evidence showing that he is even now disabled in any manner by reason of alleged causes.

The certificate of Drs. Hoopman and Whitehead filed with the appeal in which they give their opinion as to the period of incubation of Typhoid fever, is not deemed sufficient to warrant further action.

The action of rejection is not error, there is no merit in the appeal and it should be dismissed.

All of which, together with the papers in the case is herewith submitted.

Very respectfully,

The Hon.

J. P. Boutwell
Acting Commissioner of Pensions.

Secretary of the Interior.
