

deposits both in this country and abroad?

Cyl. 11

A While in the employ of the Kaolin Mining Company in 1910 I examined some bauxite which they had on their properties in Georgia and in order to ascertain whether their ore was of any value I made an examination of a number of other deposits in Georgia and collected such public data as was available on the subject at that time. Between 1911 and 1915, I made several examinations of the bauxite deposits, one or two of which were for the Republic Mining and Manufacturing Company.

Q Who engaged you to make these examinations for the Republic Mining and Manufacturing Company?

A Mr. W. C. Neilson. While in the employ of the Republic Mining and Manufacturing Company in the year 1916 I examined a majority of the deposits which they had acquired or desired to acquire in Dutch Guiana. During the year 1917 and part of 1918, as local manager of the Demerara Bauxite Company, I examined most of the lands that the company had acquired or desired to acquire in British Guiana.

Q Will you state just here what the Demerara Bauxite Company is, where it is located?

A The Demerara Bauxite Company is a local company in British Guiana organized for the purpose of owning and operating certain lands and other properties with the idea of obtaining and shipping ore.
