

bauxite, large in the mouth, high in quality, conveniently located with respect to mining that is available to some other user than the Aluminum Company of America, or its subsidiaries?

A Yes, but it is owned by a metallic producing company.

Q When was it so owned? not back to the time you were negotiating about it?

A No, I think the official conclusion of the negotiations has been quite recent, either last of last year or early in this year.

Q A little while ago you said that deposit and the Christianburg deposit was owned by a group of bauxite associations, are you changing that testimony?

A No, I am not changing that testimony.

Q Do you know who any of these people are?

A I do not know the other members of the syndicate. The British Aluminum Company, I understand, was a leader in the application. Peter Spence of Manchester, England, were also at one time included in the group; I do not know whether they continued or not.

Q What did they use bauxite for?

A To make alum, out of it.

Q I would like to have you tell us what your testimony is with respect to commercially available bauxite anywhere in the world. You said something about that this morning
