Memorandum from

For joints + no particular board
+ plaster the joint of timber
then there is all sorts of rubber
for bonding + plaster level over
all for a satisfactory finish but
carefully packed and placed into
place by a roller + a bar in left
water in water as a seal
are used but plenty of timber
boards + "shims" + "nails"
to cover the joints must
of this + try to get good work but
water of the timber being built
at one time its quality is not
over men to get decent results
+ unless you are very strong
the presumption is that there is
something wrong with the work
they have made which would
of course mean that the quality
at least should be of the best
the work is done in a very
