

CHILDS & JONES

WILL GIVE A GENUINE TWENTY DOLLAR GOLD PIECE

to any one who will show us a Steel Frame Spring Tooth Harrow, (manufactured in the United States, and fully protected by patents,) having as few perforations in frame and teeth as our new

ALL STEEL FRAME HARROW,

and tooth and frame fastenings, arranged to allow a greater or less number of teeth to be attached to the frame with spaces between equal. The teeth are fastened on the under side of the draft bars, and NOT at the INTERSECTION of the cross bars, which gives it the advantage of CLEARING ITSELF READILY and producing the LIGHTEST DRAFT POSSIBLE. Two or more of the steel parts are held together by the new fastenings, making the Harrow STIFFER AND STRONGER, instead of being weakened by holes. By this new construction our Harrow is made the strongest, having more adjustments, and is more valuable than any other Spring Tooth Harrow in existence.
