out of her; my plan has always been
mile heats (except gallops) keeping
the horse back until the last $\frac{1}{4}$
or $\frac{3}{8}$ and finish faster than the
start. Jim Hall worked all the
spring and summer on Gety and
the best he could do was 3.20
I then took him and in 4 days
drove him in 3.09 last quarter
in 45 seconds. I do not propose
letting our amateurs fool with
Victor - think I will let Jim Hall
attend to him while in the stud.
and when it comes to speed work
will drive myself until I make
other arrangements. I will not send
for him while weather is so bad but
if it moderates and roads get better
will send Hall down next week.

Yours Truly
J. G. Stennet
