

Torpedo itself, will be brought to, at such a distance
from the ship, that it will be useless to the conductor
to explode it at all, or, if he dare draw the trigger
the explosion will be harmless.

The sketches will now explain the contrivance
on a ship at anchor.

Her own anchor & cables:

Buoys attached to the anchor.

The Torpedo.

The frame, or float which supports it.

J. W. Weston
