Doctors Said He Had Dropsy

Some time ago I had an attack of grippe which finally settled in my kidneys and bladder. I doctored with the doctors and they claimed I had dropsy. I tried other remedies and got no relief from any of them. My condition was such that I was unable to work for about two months and the annoying symptoms caused me a great deal of trouble and pain. I was hardly able to turn over in bed. Seeing one of your almanacs, I decided to give Dr. Kilmer's Swamp-Root a trial and after taking several bottles was able to resume my work again. I cannot say too much in praise of your Swamp-Root as the result in my case were very truly wonderful.

Yours very truly,
ROBERT BALLARD,

A DEMOCRATIC PEACH.

New Variety Propagated in Queen Anne's is Known as the "Wilson, Clark' Peach." Mr. Wallen is the Grower.

Queen Anne's county possesses the unique distinction of propagating the first really genuine Democratic peach. The name of the new variety removes all doubt as to the genuineness of its democracy, for it is no other than the "W. C. B." or Wilson, Clark, Bryan peach." Mr. Samuel A. Wallen, of Queen Anne's county, is responsible for the birth of the new variety, and the peach is said to be a distinct compliment to some of the most potent characteristics of Democracy. To begin with, the peach is white. It is also large, and when ripe is firm and inviting to both the sight and taste. It is said to show strongly in contrast bearing well under adverse conditions and producing when others fail.

The trees upon which the first crop was grown are very young, this being the first crop they have borne. Col. Wallen exhibited a number of the peaches in Chestertown last week and announced the name he had decided for them. The "W. C. B.,, should be especially popular just at this time, in view of the fact that the names are those of three men who are occupying the greatest part of the national spotlight—Woodrow Wilson, President of the Nation; Willian Jennings Bryan Secretary of State, and Champ Clark, Speaker of the House—and all are thoroughberd Democrats.—Observer.

Typhoid Fever

How to Prevent Its Spread

ISSUED BY THE
State Board of Health
OF MARYLAND.

When TYPHOID FEVER appears in a family the source of the infection must be looked for in drinking water or food taken within the preceding twenty days. The patient may not have been infected at home, but if a second case occurs this second infection will in all probability be traceable to the first patient. In a majority of instances the drinking water has become infected. Your first business, therefore is to find out the quality of your drinking water.

You can do this by asking your local health officer for instruction about shipping us samples of your drinking water. *The daily supply of drinking water should be boi'ed.*

The infectious material of typhoid fever is produced in but one way. It grows always in the bowels and sometimes in the bladder. It therefore escapes from the sick person in the stools and urine. If we kill the germs in the stools and urine as soon as they are passed, there can be no spread of typhoid fever. These discharges should, therefore be disinfected as soon as possible. You will need a large quantity of a good disinfecting solution.

RECEIPT FOR A GOOD DISINFECTANT.

To four gallons of water add enough salt to make a strong brine. Put this in a five-gallon demijohn or jug and add a quart of crude carbolic acid. Shake it up well and you will have a good disinfectant for stools and urine.

The crude carbolic acid, known as U. S. P. 90 per cent. is very good and a quart will cost about 50 cents. There is a cheaper grade, known as a 36 per cent. acid, which is nearly as effective.

About a pint of this solution should be put in the chamber or bed pan before it is used, so that the discharges will begin to be disinfected as soon as they leave the body. There must always be at least as much of the disinfecting solution as there is of the discharges, so that more of the disinfecting solution may need to be added after the discharges are passed. If the stools are thin and watery their disinfection will be accomplished in half an hour or so, but if the stools are thick or formed very much more time will be required. On that account it is best to have a covered jar or bucket into which the bed pan can be emptied, and to empty this jar only once in 24 hours. If the discharges cannot be finally thrown into a sewer, they should be buried in the soil at a convenient spot where is no chance of their fouling a water supply. The discharges should never be thrown upon the surface of the ground, for you will hardly be successful in killing all the typhoid bacilli, and you must not place them where those not killed by the acid may be blown about in the dust or carried away by flies to infect other people.

In spite of every precaution those who wait on the sick person will get their hands infected, and it is therefore necessary to wash the hands every time one does any service about the patient's bed or body. Whoever waits on the patient must not prepare food or drink for other persons in the house, or if it is impossible to mind this rule one must most carefully and thoroughly cleanse the hands before performing any household duty outside the sick room. Good scrubbing with soap, water and a brush, and then rinsing well in fresh water will suffice for cleansing the hands.

If anyone else in the house falls sick within two weeks after the first patient, the probability is that the infection was lodged before the precautions were taken in regard to drinking water and the disposal of discharges. But if the second case occurs more than 20 days after the first case that will signify that we have made a mistake somewhere in our precautions.

DR. GEO. H. JONES,
Secretary Local Board of Health of Kent county, Galena, Md. a16-tf.

NOTICE TO THE PUBLIC.

The law is positive that persons must not leave trash in the ditches along the public roads. One-half of the washes on the roads are caused by farmer's leaving weeds in ditches and thereby preventing water to flow in natural channels. The law says :

167 L. "Any person, or corporation placing any obstructions of any kind whatsoever upon the public highways or bridges, roads, lanes, streets, avenues, or alleys, of Kent County, or interfering with or obstructing any of the ditches or drains thereof, or encroaching upon the same with fences or other obstructions or any person or corporation, its agents or employees, exercising the business of a common carrier, permitting his or its vehicles, steam or other engines or cars to obstruct any crossing for more than five minutes for any one time, shall be guilty of a misdemeanor, and shall be liable to prosecution at the instance of any taxpayer of said County and upon conviction by any Justice of the Peace exercising criminal jurisdiction in Kent County shall be fined in an amount no less than One Dollar nor more than Twenty five Dollars for each offense."
