Preventing Hog Cholera.

Mr. J. H. Arnold, of the investigational staff of the Bureau of Plant Industry gives an account of hog cholera control on a 1000 acre farm in Montgomery county, Tenn., which is especially interesting in that it gives a concrete example of control of this disease to such an extent that the farmer has absolutely no fear of its encroachment, notwithstanding the fact that the soil is full of germs and hog cholera is a menace in that section. Not only that, but until last year hogs on this farm were an unprofitable proposition because of loss from hog cholera. They are now one of the important enterprises on the farm. As soon as pigs are either brought to or born on the farm their temperature is taken. Any rise in temperature calls for a treatment with serum. After three or four weeks the temperature is again taken and the serum applied in all cases where it is not normal. Sometimes, tho not often it is necessary to give the third treatment. As a result of this procedure, the loss from cholera has been practically eliminated.

The oystermen were hit hard the latter part of last week, by the buyers offering 20 cents for strait up stock. In disgust, the major part of the tongers laid off till Monday, when prices for the very best stock was 25 cents. Reports were circulated that better times are just ahead, but as this is a rehash of similar reports for the past two years without fulfillment, the oystermen take very little stock in the report.

WHY pay more? In good many instances, for an article of less value. The only successful plan is—INVESTIGATE, learn by comparison, and learn just as a great number of clothing users in this locality are doing.

We Reiterate This Stubborn Fact

i. e.—we are making clothes to order. Fit, material and workship fully guaranteed for less money than you can NOW buy same qualities in ready-made for and we reiterate this indisputable reason, i. e.—no large stock to carry and carry over, large rents and up-keep generally.—THIS IS WHY.
