SELECT SEED BEANS IN POD AT ONCE

Bean growers who would avoid a repetition next year of the heavy losses from disease suffered this season are advised by the Department of Agriculture to give their personal attention to the immediate selection of a stock of seed beans free from disease infection. They should select the seed beans in the pod and not after threshing.

They should simply pick the pods that are free from all spots, save and thresh separately. The planting of infected seed is primarily responsible for the troubles experienced. Weather conditions greatly influence the subsequent development of disease, but clean seed on clean land will go far toward giving a clean crop even in a season like the present, which has been exceptionally favorable to the development of disease and unfavorable to the growth of the bean crop.

Two bean diseases are commonly prevalent, anthracnose and bacterial blight. Both attack and spot the pods, penetrate them and enter the bean, remaining dormant over winter under the seed coats, where they cannot be reached by disinfectants.

When the beans are planted these diseases attack the young seedlings, causing a root rot, and blighting of stem and leaves, and if the weather is cool and wet they spread again to the pods. Bacterial blight is conveyed by wind and other means to a greater extent than anthracnose and is less easily controlled, but clean seed and crop rotation will give best results. Old bean ground should not be replanted next year.

As far as possible each farmer should save his own seed. Beans have been so generally affected by disease that the farmer should not rely on ordinary so-called northern-grown seed or elevator stock for planting. If he has to buy seed he should make certain that it has been selected from disease-free pods. Examine all threshed seed carefully and if it shows suspicious spots or other evidence of disease it should not be used. Home selection also will tend to build up a strain adapted to the locality and better than seed brought from a distance.

A survey just completed shows that there are fields in all parts of the bean States where clean pods, or even plants with all pods clean, may be found, although some fields are hopelessly affected. The farmer who expects to continue bean growing—and this valuable crop should not be abandoned because of this year's discouraging experience—should pick enough clean pods to plant his next crop, or at least a large seed plot. These should be shelled by hand and carefully stored. If the quantity is small it would be well to plant by hand two beans every 12 or 15 inches in ordinary rows in a separate seed plot.

There should be organized effort on the part of county agents, bean dealers and community leaders to have all available clean seed saved for local use, and not sold with the general crop. This must be done before the beans are threshed.

How To Select Seed Beans

Get seed from your own crop, if possible. If there are no clean pods in your own crop try to secure clean pods from a more fortunate neighbor.

Select in the pod, not after threshing.

Pick pods free from all spots. Spots on the pods mean that anthracnose or bacterial blight may be hidden in the seemingly clean bean.

Thresh selected pods separately.

Examine your threshed seed carefully and throw out all doubtful looking beans, especially those that are spotted or shriveled.

Rotate Don't replant old bean ground next year. Clean seed and rotation are the best crop insurance.

If you have to buy your seed, make sure that it has been selected by the grower from disease-free pods. Examine purchased seed. Do not plant if the threshed seed look suspicious.

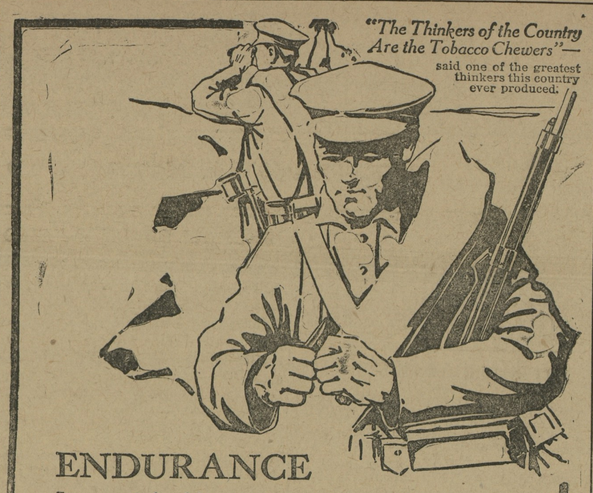

Look ahead. Insure a supply of clean seed for 1917 by selecting seed from clean pods and planting it on clean land in 1916.

HOG CHOLERA LOSSES ARE ENORMOUS.

Statistics prepared by the U. S. Agricultural Department show that the actual loss caused by the death of hogs by cholera is appalling and runs into millions of dollars. An effective remedy against the ravages of this diseaae has been found in Cal-Sino hog restorative. It is not only a preventive but also a cure in most cases especially if not put off too late. Cal-Sino hog restorative wards off cholera and other bowel ailments. A small quantity regularly mixed with the food keeps swine healthy and increase their weight. The results from its use, both to tone up the system, and to ward off disease, have been amazingly satisfactory. There has been a steadily increasing demand for this remedy, proving conclusively that it is giving satisfaction Hundreds of testimonials bear evidence to this fact. Cal-Sino hog restorative as well as all other Cal-Sino stock and poultry remedies, of which there is one for every ailment of horses, cattle swine and poultry, are put up by receipts of a consulting veterinarian connected with the company, and are based on 35 years practical experience, leading merchants (see advertisements) will tell you all about these up-to-date veterinary remedies.

New Light.—Mr. G. E. Williams, representing the Oxweld Acetylene Co. of Newark N. J. and Chicago, recently sold a Pilot lighting system to Mr. J. E. Woodall of Georgetown. Mr. Samuel Caldwell, of Galena states that they are more than pleased with their plant which was installed in August. Mr. John Bennett, of Still Pond has ordered a Pilot from Mr. Williams, which he will use in lighting up his barns and dairy in addition to his home. Mr. Harry Willis, of Betterton has also ordered one for his beautiful home.

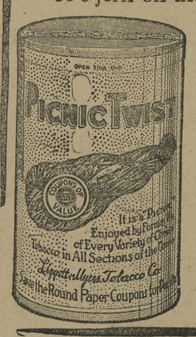

The first six minutes of play in Saturday's game with Western Maryland at Westminster proved the undoing of the local collegians and they lost by the score of 9 to 0. A touchdown and a goal from field by Western Maryland turned he trick. From the kick-off the home team ploughed through Washington almost at will and soon had nine points to their credit. After that, however, saw a change in the game, with Western Maryland completly on the defensive, with Washington hammering at them continually. Twice during the second half Washington came near scoring, having Western Maryland's secondary defence back of their own goal line, but each time they failed to score.

"The Thinkers of the Country Are the Tobacco Chewers"— said one of the greatest thinkers this country ever produced.

ENDURANCE

Is one of the biggest factors in modern warfare. And tobacco is a powerful aid to endurance—not strong, rank tobacco, but PICNIC TWIST, the *mild*, long-lasting chew, without black tobacco's jerk on the nerves.

PIC-NIC TWIST 5¢

CHEWING TOBACCO

You want a *clean* tobacco that you can chew all day? That means you want PICNIC TWIST, the mellow, soft chew.

Try it once, and bid good-bye to black tobacco. Buy it by the twist or the air-excluding drum of 11 twists.

Liggett & Myers Tobacco Co.

PREVENTS and CURES

HOG CHOLERA

Treat your hogs with Cal-Sino Hog Restorative and they will not get sick. Give it to those that are sick and it will cure them if not put off until too late. Hog Cholera is very catching, and if your hogs are not affected by the epidemic, you should take preventive measures at once.

Cal-Sino HOG RESTORATIVE

is a medicine that Prevents sickness and Cures all curable cases of Cholera. But be sure to use it in time. Fever and shivering, failing appetite, dullness and hiding under litter or bedding, are the first symptoms.

If you notice these, phone or call at once. We will gladly tell you all about it.

There are 18 Cal-Sino Remedies for various ailments of Horses, Cattle, Swine and Poultry.

Cal-Sino Distemper, Cough and Heave Remedy is a scientific preparation of the finest drugs that never fails to give satisfaction. Large Bottle (12 ounces) 50c.

Ask for folder about "Diseases of Swine. Hog Cholera, Swine Plague." Tells you all you need and want to know. It's FREE.
