Prince Albert is such friendly tobacco

that it just makes a man sorry he didn't get wind of this pipe and cigarette smoke long, long ago. He counts it lost time, quick as the goodness of Prince Albert gets firm set in his life! The patented process fixes that—and *cuts out* bite and parch!

Get on the right-smoke-track soon as you know how! Understand *yourself* how much you'll like

PRINCE ALBERT
the national joy smoke

It stands to reason, doesn't it, that if men all over the nation, all over the world, prefer P. A. that it must have *all the qualities* to satisfy your fondest desires?

Men, get us right on Prince Albert! We tell you this tobacco will prove better than you can figure out, it's so chummy and fragrant and inviting all the time. Can't cost you more than 5c or 10c to get your bearings!

Watch your step!
It's easy to change the shape and color of unsalable brands to imitate the Prince Albert tidy red tin, *but it is impossible* to imitate the flavor of Prince Albert tobacco! The patented process protects that!

Buy Prince Albert everywhere tobacco is sold—in toppy red bags, 5c; tidy red tins, 10c; handsome pound and half-pound tin humidors—and—in that classy crystal-glass pound humidor with sponge-moistener top that keeps the tobacco in such great trim!

GOOD TIME TO PRUNE TREES

Much Depends Upon Object Sought, Age of Trees and Convenience in Performing the Work.

It is a fact that trees pruned in June are more likely to set fruit than if pruned in spring or winter; also wounds made in June heal more quickly than when made in early spring. On the other hand, it is a fact that most farmers and orchardists are too busy in June with other work to attend to pruning; also it is more difficult to prune in June, because the leaves cover the trees and interfere more or less with rapid, easy work. It is also a fact that no one rule will apply to all cases.

If a farmer or fruit grower wants wood growth in a young orchard or on young shade trees, he will get it most quickly by doing his pruning in early spring, whereas, if he wants merely to promote the formation of fruit buds, he will find that June pruning is best; so, looking at the question in a large way, there are two "best times" to prune trees—depending upon the object sought, the age of the tres and convenience in doing the work.

Fruit on the Farms.

The old family orchards are rapidly disappearing, so take more care of them; if we don't, the future commercial orchardists will supply the rural as well as the city population.

Storing Squashes.

Squashes should be stored in a dry place at a temperature of about 50 degrees. Do not lay more than one deep on shelves.

EXPENSE OF RAISING HEIFER

Estimated All Way From $50 to $75—That Amount Will Often Purchase Good Dairy Animal.

Is it cheaper to raise cows or to buy them? Opinions vary as to the cost of raising a heifer to milking age and it has been reckoned all the way from $50 to $75.

If this is correct it may be more profitable to buy than to raise them, for that amount of money will often purchase a pretty good heifer about ready to produce milk.

It is probable in this reckoning that retail town prices have been charged for everything consumed and no allowance made for what was returned to the land; also that the calf must have been fed whole milk for a long period.

It is possible to raise calves on cheap feed for most breeders do not care for a heifer calf to get fat until she has grown a frame.

Scatter Air-Slaked Lime.

Intimately mix a gill of crude carbolic acid with a quart of dry, air-slaked lime. Dust the dry lime over every part of the poultry house—on the walls, in the nests, over the roosts and over the yards. It will be found an excellent disinfectant and will do more to destroy the germs of disease, and with as little cost, than anything else that can be tried.

Small Fruits.

Money can be made from small fruits. The area is decreasing year by year, and this means the prices will keep getting better.

BREED FOR THE FARM FLOCK

Farmer Must Suit Himself and Market Conditions in Selecting Variety—Discard the Scrub.

As with most of our domestic animals, there is absolutely no best breed of hens; if there was there would soon be only that one breed left, while now one hardly dares say how many good breeds there are without first consulting the very latest issue of the Standard of Perfection.

Then suit yourself and your market conditions in selecting your breed, but select some one breed and "stick to it" until you have the best flock of that breed in the county or state. The color of the shell of the egg has much to do with the market demand for it. San Francisco demands

Fine Type for Farm.

a clear white egg, while Boston wants a rich brown color; and the intermediate cities, all the way across, may, in a way, take almost any color; but most city retailers find it to their advantage to separate the colors to suit individual customers.

But never, no never, fool away very much time with "scrub" or mongrel stock on the farm, and don't try to keep too many breeds or you may soon have a lot of mongrels yourself. Even on the regular poultry ranch where many breeds are kept, strange "mixeries" sometimes happen in some most unexplainable way.

It is often claimed that mixed breeds or "scrubs" lay better than purebreds, but a careful investigation will generally prove that the feed, care, and perhaps the age of the birds, has more to do with the egg product than the simple fact that they are cross-bred.

But while different markets demand different colored eggs there is no market on this continent, at least, that demands a dirty or stained egg, or an egg that has been under a broody hen for a night or two, or one that has been out in the sun for several days. Gather daily at least and ship at least weekly.

DAIRYMEN VERSUS THE DAIRY

Man Is Chief Factor in Production of Clean Milk, According to Medical Experimenters.

A number of American medical experts and experimenters in hygiene made a study to determine the most important factor in the production of clean milk—the dairy or the dairyman—and have come to the conclusion that the dairyman is the chief factor and the dairy of secondary importance.

The clean dairyman may be transported from dairy to dairy and can make clean milk wherever he goes.

It is said that if all the nonessentials or matters of secondary importance are eliminated, the factors which even alone are sufficient to produce under the conditions found in ordinary dairies a milk so clean that it will have with great regularity a bacterial count less than 10,000 bacteria per cubic centimeter are as follows:

Milking with dry hands into covered milking pails, the proper washing and sterilization of milking pails and milk cans, cooling the milk by placing the cans in tanks of cold water or ice water, regular laboratory testing of the milk for bacteria, and payments based on the laboratory tests.

ASHES GOOD AS FERTILIZER

They Not Only Contain Potash and Phosphoric Acid, but Also Magnesia and Lime.

The farmer who burns wood for heating and cooking should carefully store the ashes and not permit them to leach, as they have a peculiar fertilizing value. They not only contain potash and phosphoric acid in appreciable amounts, but also contain magnesia and lime, and when applied to the land they also act indirectly to increase the available nitrogen content of organic matter in the soil.

Ordinary house ashes contain on the average about eight or nine per cent of potash and two per cent of phosphoric acid. Investigators have considered that there is enough potash and phosphoric acid in a bushel of ashes to make it worth 20 or 25 cents. Besides that, some 10 or 15 cents additional might be allowed for the "alkali power" of the ashes. This power is that which enables ashes to rot weeds and to ferment peat. The potash content of ashes will be lost if they are permitted to leach, and care should be taken to store them in a dry place.

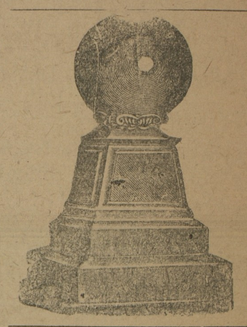

Dormant Spraying.

The "dormant spraying" which destroys the bark scale and the eggs of injurious insects, is the most important spraying of the year, in the judgment of some orchardists
